

# SMART INDUSTRIAL ETHERNET SWITCH

Web GUI User Manual

Ver. 3.0.0

## **About This Manual**

### **Introduction**

This document chapter includes an introduction to the Fiberroad Industrial Ethernet products family,

### **Conventions**

This document contains notices, figures, screen captures, and certain text conventions.

### **Figures and Screen Captures**

This document provides figures and screen captures as example. These examples contain sample data. This data may vary from the actual data on an installed system.

**CONTENTS**

Revision History .....	7
Chapter 1 System Configurations .....	8
1. About Web-GUI Management.....	8
1.1 Preparing for Web Management .....	8
1.2 Device Summary.....	9
1.3 System-Administratiors.....	9
1.3.2 System - Online Users.....	10
1.3.3 Management Setting.....	10
1.4 System - Router Table .....	11
1.4.1 System – Router Table – Static Entries .....	11
1.4.2 Router Table – Route Table .....	11
1.5 System Log .....	12
1.5.1 System Log – Setting.....	12
1.5.2 System Log – View.....	14
1.6 Configurations.....	15
1.6.1 Configurations – View .....	15
1.6.2 Configurations – Import .....	15
1.6.3 Configurations – Export.....	16
1.6.4 Configurations – Restore Factory Default.....	16
1.6.5 Configurations – Date & Time .....	17
1.6.6 Configurations – Device Status .....	18
1.6.7 Configurations – ARP Table .....	19
1.6.8 Configurations – Software Upgrade .....	19
1.6.9 Configurations – Reboot.....	20
Chapter 2 Management Configurations .....	21
2. Management .....	21
2.1.1 Management - IP Interfaces – Settings.....	21
2.1.2 Management – IP Interfaces – DHCP Client .....	22
2.1.3 Management – IP Interfaces – DHCP Client(IPv6).....	23
2.2 Management – SNMP .....	24
2.2.1 Management -SNMP - v1/v2 setting.....	24
2.2.2 Management – SNMP – v3 setting .....	25

2.2.3 Management – SNMP – Trap Setting.....	27
2.3 Management – LLDP.....	29
2.3.1 Management – LLDP - Global Setting.....	29
2.3.2 Management – LLDP – Port Configurations.....	30
Chapter 3 Base Configuration .....	32
3 Base Configuration .....	32
3.1.1Base Configuration-Port-Status And Setting.....	32
3.1.2 Base Configuration-Port-Statistics.....	34
3.1.3 Base Configuration-Port-SFP Information .....	35
3.1.4 Base Configuration-Port-SFP Detail Information.....	36
3.1.5 Base Configuration-Port-Traffic .....	36
3.2 Base Configuration - VLAN .....	37
3.2.1 Base Configuration-VLAN-Basic Setting .....	37
3.2.2 Base Configuration-VLAN-Port Setting.....	39
3.2.3 Base Configuration-VLAN-Double VLAN .....	40
3.3 Base Configuration-QOS .....	40
3.3.1 Base Configuration-QoS- Mapping -802.1p Priority .....	41
3.3.2 Base Configuration-QoS- Mapping – DSCP Priority.....	42
3.3.3 Base Configuration-QoS- Mapping – Local Priority .....	43
3.4 Base Configuration-QoS- Ports.....	44
3.4.1 Base Configuration-QoS- Ports-Port Priority .....	44
3.4.2 Base Configuration-QoS- Ports-Rate Limitation .....	45
3.5 Base Configuration-FDB Table.....	46
3.5.1 Base Configuration-FDB Table- Configuration – Aging Setting .....	46
3.5.2 Base Configuration-FDB Table- Configuration – Static Mac Entry .....	47
3.5.3 Base Configuration-FDB Table- Configuration – Port Learning Ability .	48
3.5.4 Base Configuration-FDB Table- FDB Table.....	49
3.5.5 Base Configuration-FDB Table- Delete Entries .....	50
3.5.6 Base Configuration-FDB Table- Port Mirror .....	51
3.5.7 Base Configuration-FDB Table- Port Isolate .....	52
3.5.8 Base Configuration-FDB Table- Storm Filters .....	53
Chapter 4 Advanced Configurations .....	54
4. Advanced Configuration.....	54

4.1 Advanced Configuration – Ports – Ports Security .....	54
4.2 Advanced Configuration – ACL .....	55
4.2.1 Advanced Configuration – ACL – ACL Group Setting.....	55
4.2.2 Advanced Configuration – ACL – ACL Rule Setting .....	57
4.3 Advanced Configuration – DHCP snooping .....	59
4.3.1 Advanced Configuration – DHCP snooping – Global Setting.....	59
4.3.2 Advanced Configuration – DHCP snooping – Port Setting.....	60
4.3.3 Advanced Configuration – DHCP snooping – Binding Table .....	61
4.4 Advanced Configuration – DHCP Server .....	61
4.4.1 Advanced Configuration – DHCP Server – Global Setting.....	61
4.4.2 Advanced Configuration – DHCP Server – IP Address Pool.....	62
4.4.3 Advanced Configuration – DHCP Server – IP Address Lease Information .....	63
4.5 Advanced Configuration – Multicast .....	64
4.5.1 Advanced Configuration – Multicast – Manual Address Setting .....	64
4.5.2 Advanced Configuration – Multicast – IGMP snooping Global Setting.	65
4.5.3 Advanced Configuration – Multicast – IGMP snooping VLAN setting ...	66
4.5.4 Advanced Configuration – Multicast – IGMP snooping IP Groups .....	68
4.5.5 Advanced Configuration – Multicast – IGMP snooping MAC Groups ..	68
4.5.6 Advanced Configuration – Multicast – IGMP snooping Multicast Table .....	69
4.6 Advanced Configuration – GMRP .....	70
4.6.1 Advanced Configuration – GMRP– GMRP Setting.....	70
4.7 Advanced Configuration – GVRP.....	71
4.7.1 Advanced Configuration – GVRP – GVRP Setting.....	71
4.8 Advanced Configuration – 802.1X .....	73
4.8.1 Advanced Configuration – 802.1X – Authentication Server .....	73
4.8.2 Advanced Configuration – 802.1X – Global Setting .....	74
4.8.3 Advanced Configuration – 802.1X – Port Configurations.....	75
4.8.4 Advanced Configuration – 802.1X – User Authentication Info .....	76
4.9 Advanced Configuration – Link Aggregation .....	77
4.9.1 Advanced Configuration – Link Aggregation – Global Setting.....	77
4.9.2 Advanced Configuration – Link Aggregation – Port Configuations .....	78

4.9.3 Advanced Configuration – Link Aggregation – Aggregation Information .....	79
4.10 Advanced Configuration – Loopback .....	80
4.10.1 Advanced Configuration – Loopback – Global Setting .....	80
4.10.2 Advanced Configuration – Loopback – Port Configuration .....	81
4.11 Advanced Configuration – STP .....	82
4.11.1 Advanced Configuration – Global Setting .....	82
4.11.2 Advanced Configuration – Port Configuration .....	83
4.11.3 Advanced Configuration – STP Information .....	84
4.11.3 Advanced Configuration – STP Information .....	85
4.12 Advanced Configuration – ERPS .....	86
4.12.1 Advanced Configuration – Global Setting .....	86
4.12.2 Advanced Configuration – ERPS - Ring Setting .....	87
4.12.3 Advanced Configuration – ERPS - Ring Information.....	88
4.13 Advanced Configuration – Alarm.....	89
4.13.1 Advanced Configuration – Alarm – Relay Setting .....	89
4.13.2 Advanced Configuration – Alarm – Led Setting .....	89
4.13.3 Advanced Configuration – Alarm – Temperature Setting.....	90
4.13.4 Advanced Configuration – Alarm – Trap Setting .....	91
4.13.5 Advanced Configuration – Alarm – Power Setting.....	92
4.14 Serial Management.....	92
4.14.1 Serial Management – Serial Device .....	92
4.14.2 Serial Management – Serial Protocol .....	94
4.14.3 Serial Management – Serial Statistics.....	95
4.15 Advanced Configuration – Extended.....	96
4.15.1 Advanced Configuration – Extended – Port Cable Setting.....	96
4.15.2 Advanced Configuration – Extended – Ping Test.....	97

## Revision History

Version	Date	Author	Reasons of Change	Section(s) Affected
1.0	2017/12/04		Initial Release	All
2.0	2018/05/18		SNMPv3, EEE	SNMP, Basic Configuration
2.1	2018/10/20		Definition of name	All
3.0	2020/11/1		ERPS Ring Setting	ERPS

## Chapter 1 System Configurations

This chapter describes the port configuration in detail, including but not limit to the following:

- ❖ Administrator
  - ❖ Router Table
  - ❖ ARP Table
  - ❖ Software Upgrade
- 

### 1. About Web-GUI Management

There is an embedded HTML web site residing in flash memory on CPU board of the switch, which offers advanced management features and allows users to manage the switch from anywhere on the network through a standard browser such as Mozilla Firefox or Chrome. (Note: Window IE is not supported) The Web-Based Management supports Mozilla Firefox 54.X or later, or Chrome 59.X or later. The Web browser is a program that can read hypertext.

#### 1.1 Preparing for Web Management

Before using the web management, install the industrial switch on the network and make sure that any one of the PCs on the network can connect with the industrial switch through the web browser.

The industrial switch default value of IP, subnet mask, username and password are listed as below:

- ❖ IP Address: 192.168.1.6
- ❖ HTTP service: Enable
- ❖ User Name: admin
- ❖ Password: admin

## 1.2 Device Summary

Overview the device information and port status.

The screenshot shows the 'Device Summary' page for the FR-7M3208S switch. On the left is a navigation sidebar with 'Device Summary' selected. The main area has three sections: 'Device Information' (product model FR-7M3208S, MAC address 001893-172504, serial number N/A, released date 2021-05-24, running time 5 minutes 52 seconds, current temperature 36.0 °C, power supply Power 1 & Power 2), 'Port Status' (10 ports GE1-GE10, all 0.00 bps), and 'Usage' (CPU 11.8%, Memory 25.6%, Nvram 0.2%).

## 1.3 System-Administrators

Add Users and its level, status and description.

The screenshot shows the 'Administrators' page. The left sidebar includes 'Administrator' under 'System'. The main area displays a table of users (admin) with columns for Name, Password, Status, Level, and Description. A modal window titled 'Add User' is open, showing fields for Name, Password, Confirm Password, Level (set to Guest User), Status (Super Administrator), Description (Default Administrator), and buttons for Apply and Cancel.

Item	Description	Notes
Name/Password/ConfirmPassword	As Needed	N/A
Level	Super/Senior/Junior/Guest	N/A
Status	ON/OFF	N/A
Description	As Needed	N/A

Remarks: 1.A total of 16 users can be added regardless of the level

### 1.3.2 System - Online Users

Overview online users information

**Remarks:** 1, Only super administrator have this privilege.

Name	Level	Login Type	Login Information	Login Time	Description
admin	Super Administrator	web-1	:ffff:192.168.1.138	2021-12-16 09:34:49	Default Administrator

### 1.3.3 Management Setting

Access Timeout Setting

Login Way Setting	
Console Timeout	5 <1-30> Default:5minutes
Telnet	<input checked="" type="radio"/> Enabled <input type="radio"/> Disabled Timeout:5 <1-30> Default:5minutes
SSH	<input checked="" type="radio"/> Enabled <input type="radio"/> Disabled Timeout:5 <1-30> Default:5minutes
WEB	<input checked="" type="radio"/> Enabled <input type="radio"/> Disabled Timeout:5 <1-30> Default:5minutes

Item	Description	Notes
<b>Consolt Timeout</b>	1-30	Default:5 minutes
<b>Telnet Timeout</b>	1-30	Default:5 minutes
<b>SSH Timeout</b>	1-30	Default:5 minutes
<b>WEB Timeout</b>	1-30	Default:5 minutes

## 1.4 System - Router Table

### 1.4.1 System - Router Table - Static Entries

The screenshot shows the 'FR-7M3208S - Static Entries' page. The left sidebar contains a navigation tree with 'System' selected, followed by 'Router Table' and 'Static Entries'. The main content area has tabs for 'Destination', 'Subnet Mask', 'Gateway', and 'Metric'. A 'Static Entries' sub-form is open, showing fields for 'Add Type' (Route), 'Destination' (IPv4(A.B.C.D)), 'Subnet Mask' (IPv4(A.B.C.D)), 'Gateway' (IPv4(A.B.C.D)), and 'Metric' (0). Buttons for 'Apply' and 'Cancel' are at the bottom.

#### Item Description Notes

<b>Add Type</b>	Route/Default Route
<b>Destination</b>	IPv4(A.B.C.D)
<b>Subnet Mask</b>	IPv4(A.B.C.D)
<b>Gateway</b>	IPv4(A.B.C.D)
<b>Metric</b>	0-9999

### 1.4.2 Router Table - Route Table

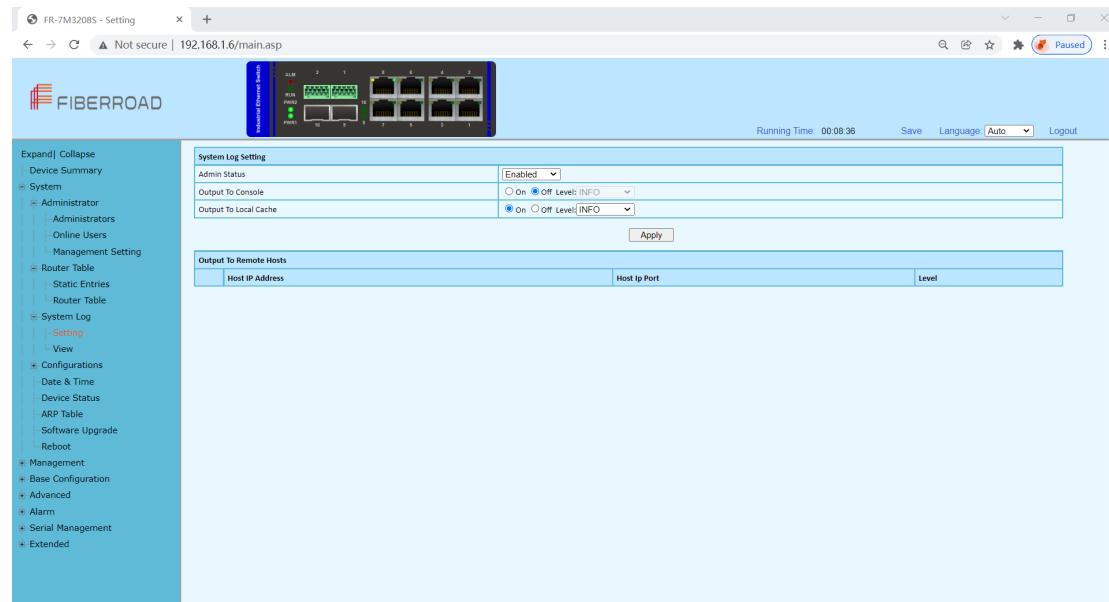

The screenshot shows the 'FR-7M3208S - Router Table' page. The left sidebar contains a navigation tree with 'System' selected, followed by 'Router Table'. The main content area displays a table with columns: Destination, Subnet Mask, Gateway, Metric, and Interface. Two entries are listed: one for 192.168.1.0/24 with gateway 255.255.255.0 and metric 0, and another for 127.0.0.0/24 with gateway 255.255.255.0 and metric 0.

Destination	Subnet Mask	Gateway	Metric	Interface
192.168.1.0	255.255.255.0(24)	0.0.0.0	0	ip0
127.0.0.0	255.255.255.0(24)	0.0.0.0	0	Other

## 1.5 System Log

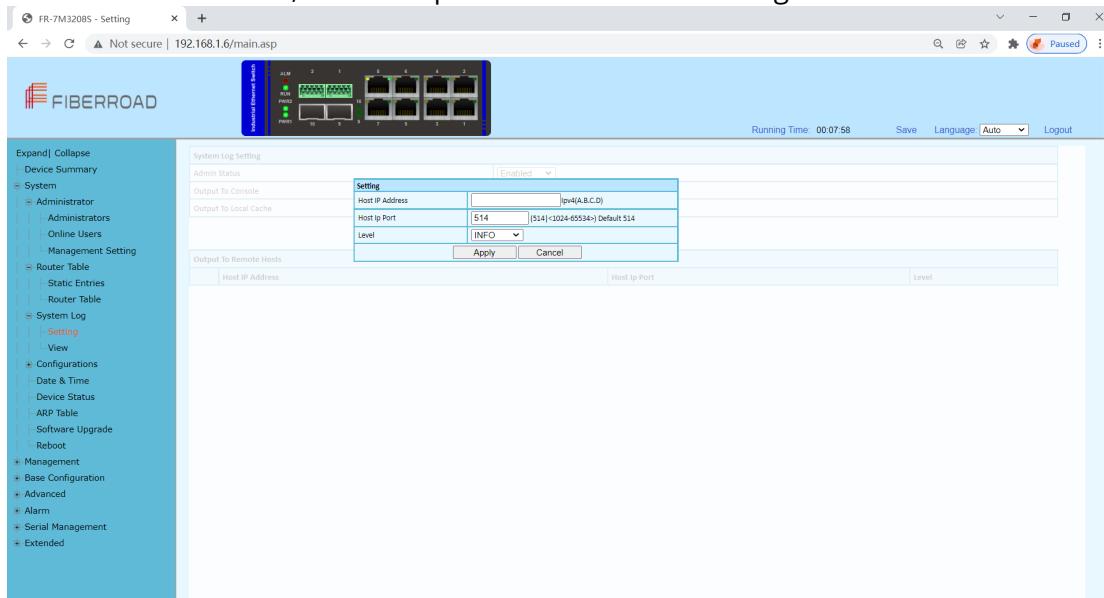

### 1.5.1 System Log - Setting

In the system log setting interface, you can view or modify system log configuration

Item	Description	Notes
<b>Admin Status</b>	Enable/Disable	Default: Enable
<b>Output To Console</b>	ON/OFF	Default: OFF
<b>Output To Local Cache</b>	ON/OFF	Default: ON
<b>Level</b>	System log level, divided into 8 levels according to the severity <b>EMERG</b> : level 0, the system cannot be used <b>ALERT</b> : Level 1, need to be processed immediately <b>CRIT</b> : Level 2, Severe State <b>ERR</b> : Level 3, Error Status WARNNING : Level 4, Warning Status <b>NOTICE</b> : Level 5, normal but important state <b>INFO</b> : Level 6, Notification Event <b>DEBUG</b> : Level 7, debugging information	Default: INFO

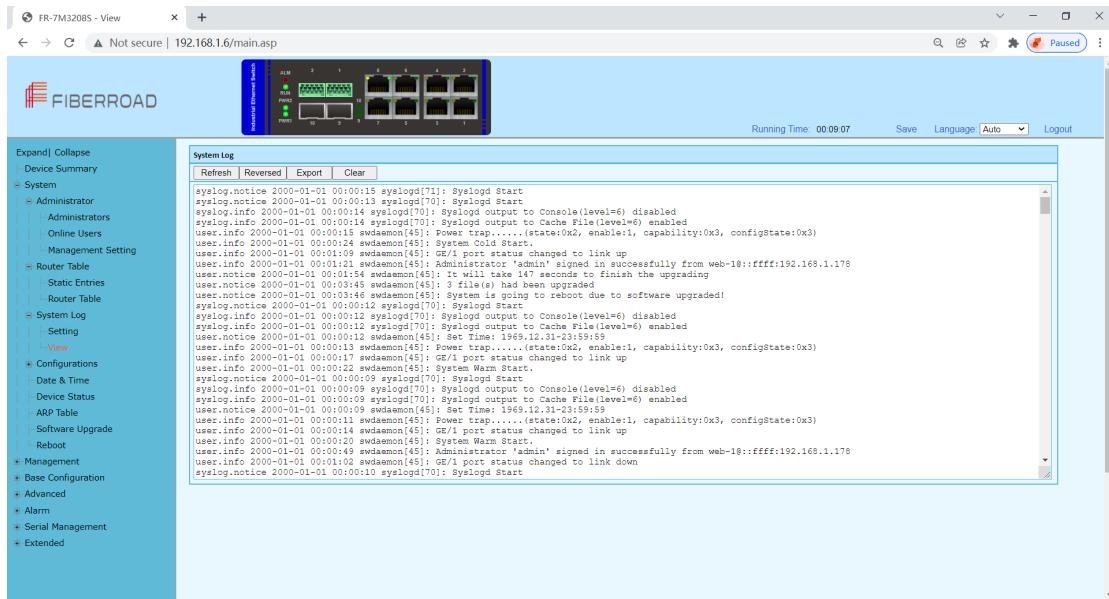

Click the “Add” button, to the output to remote hosts setting.

Item	Description	Notes
<b>Host IP Address</b>	Remote log host IP address	N/A
<b>Host IP Port</b>	Remote log host port, range 514,1024-65534	Default:514
<b>Level</b>	System log level, divided into 8 levels according to severity <b>EMERG</b> : level 0, system cannot be used <b>ALERT</b> : Level 1, need to be processed immediately <b>CRIT</b> : Level 2, Severe State <b>ERR</b> : Level 3, Error Status <b>WARNING</b> : Level 4, Warning Status <b>NOTICE</b> : Level 5, normal but important state <b>INFO</b> : Level 6, Notification Event <b>DEBUG</b> : Level 7, debugging information	Default: INFO

Remarks: 1. The smaller the log level value, the higher the level. Only logs with a level equal to or greater than the set level will be output. For example, if you set the logging level to the console to 5 (NOTICE), only logs with level 0 to 5 will be output to the console.

### 1.5.2 System Log - View

Item	Description	Notes
<b>Refresh</b>	Refresh the system log content	
<b>Reversed</b>	New to old display in chronological order	
<b>Export</b>	Export the contents of the system log	
<b>Clear</b>	Clear he contents of the system log	

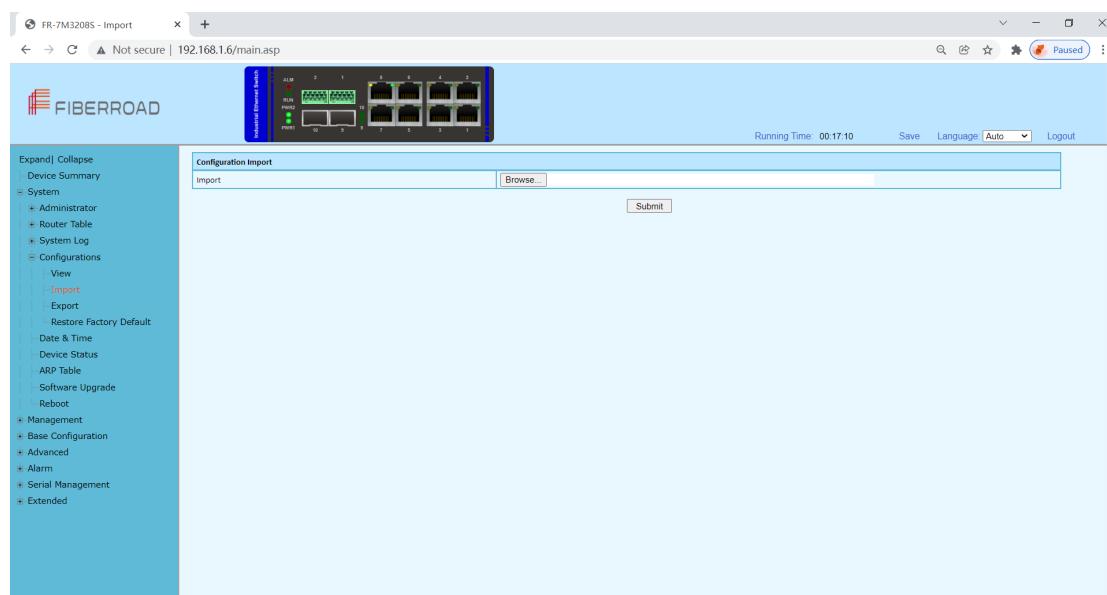

## 1.6 Configurations

### 1.6.1 Configurations - View

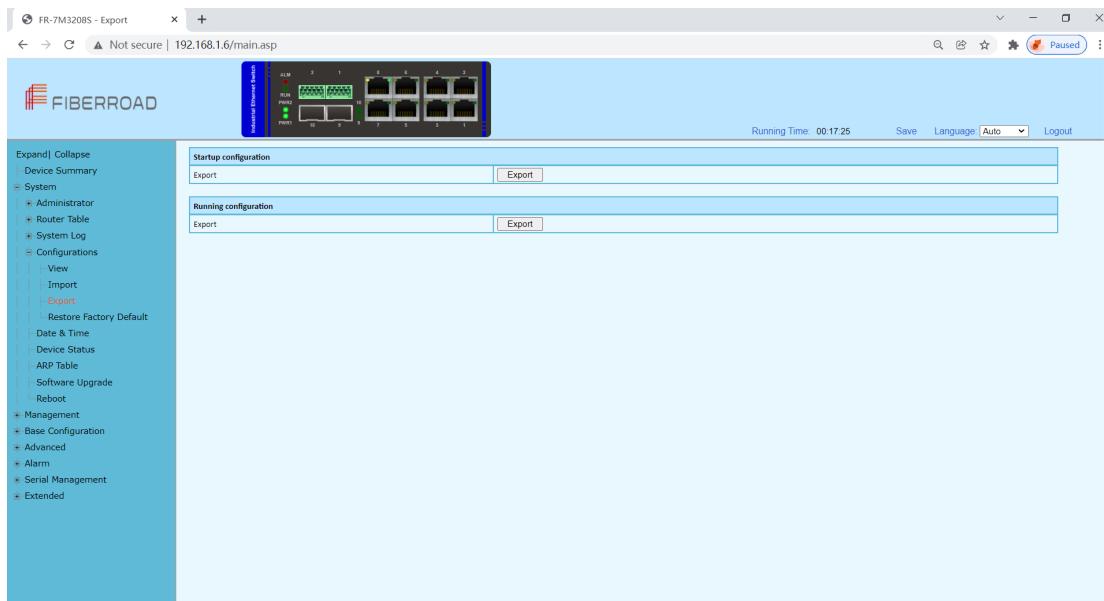

Item	Description	Notes
<b>Running Configuration</b>	Show system running configuration	Text Style
<b>Startup Configuration</b>	Show system startup configuration	Text Style
<b>Reload</b>	Reload the running or startup configuration	

### 1.6.2 Configurations - Import

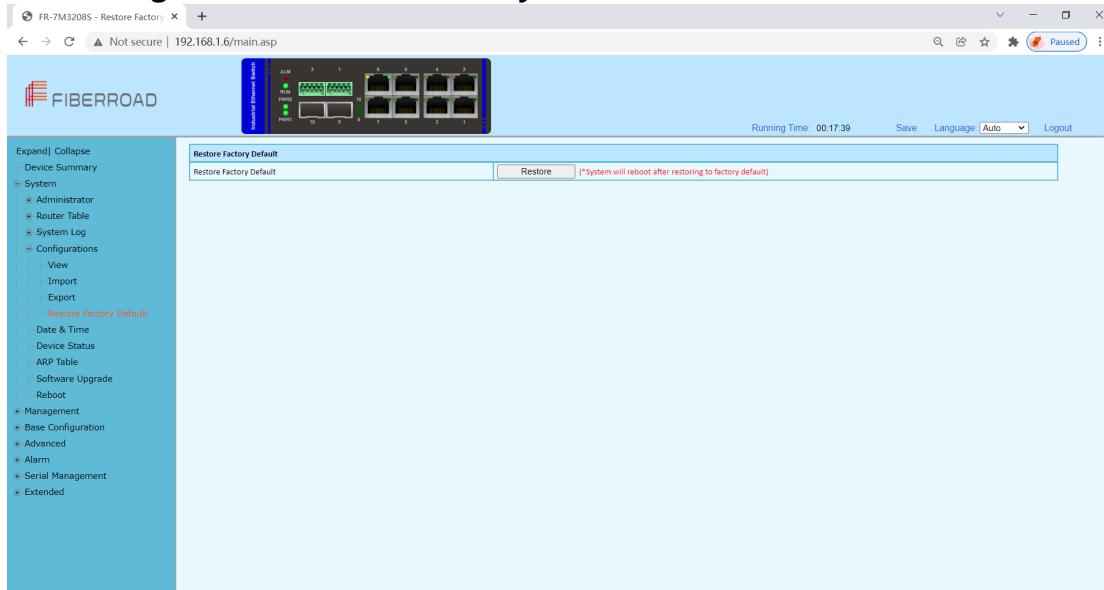

Remarks: 1, In the Configurations [Import] interface, click [Browse], select the configuration file to import, and click [Submit] to start the import.

### 1.6.3 Configurations - Export

Remarks: 1. Export configuration is divided into startup configuration and running configuration. Click [Export] in the corresponding project to prompt up the "File Save" dialog box (different browsers may differ, here take the IE11 browser as an example), click [Save] to export the corresponding configuration file to the local.

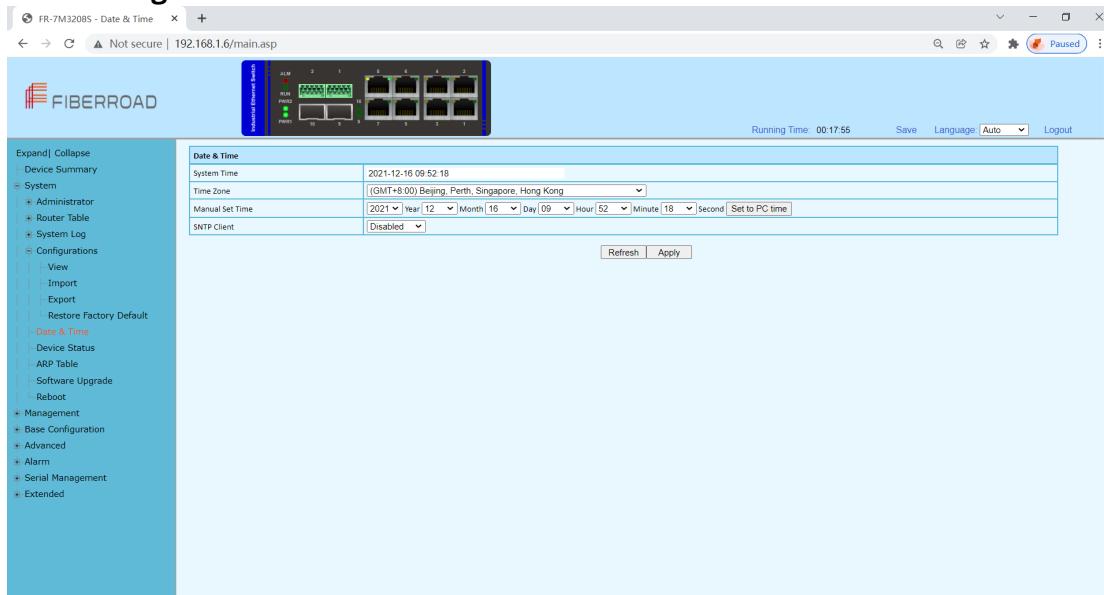

### 1.6.4 Configurations - Restore Factory Default

#### Configuration Steps

1. Click [Restore] and then click [OK] in the confirmation dialog box to restore the factory configuration.
2. Click [Cancel] to cancel the factory configuration restoration. After a successful factory reset, the system automatically restarts to take effect to the factory configuration.

### 1.6.5 Configurations - Date & Time

Item	Description	Notes
<b>System Time</b>	Display the actual effective system time.	Read Only
<b>Time Zone</b>	System time zone setting, select any time zone from the drop-down list.	
<b>Manual Set Time</b>	It can be set after the SNTP client is disabled. The year range is 1970-2037. Others are the same as the common settings.	
<b>Set to PC time</b>	Synchronize with PC time	
<b>SNTP Client</b>	Enabled: Enable the SNTP client Disabled: Disable the SNTP client	Default:Disabled

<b>Date &amp; Time</b>	
System Time	2018.06.25-17:15:52
Time Zone	(GMT+8:00) Beijing, Perth, Singapore, Hong Kong
Manual Set Time	2018 Year 6 Month 25 Day 17 Hour 15 Minute 10 Second
SNTP Client	Enabled
<input checked="" type="checkbox"/> Unicast    IP: 8.8.8.8    Interval(unit:minutes): 1440 <10-43200> <input type="button" value="Sync now"/>	
<input type="checkbox"/> MultiCast <input type="checkbox"/> Broadcast Sync Status	

Item	Description	Notes
<b>Synchronous Mode</b>	Unicast Multicast Broadcast	These three modes are multi-selectable, but at least one must be selected
<b>IP</b>	IP address pf SNTP, Default IP address 8.8.8.8; Interval range 10-43200, and default value 1440	Only for unicast mode
<b>Interval</b>	SNTP client time synchronization interval	Only for unicast

**Sync now** SNTP client immediate synchronize times

mode

## 1.6.6 Configurations - Device Status

In the [Device Status] interface, the basic information and the operating status information of the device system are displayed.

Item	Description	Notes
<b>Product Model</b>	The device mode	Read Only
<b>Product MAC Address</b>	The device MAC address	Read Only
<b>Product Serial Number</b>	The device product serial number	Read Only
<b>Software Version</b>	The software version running on	Read Only
<b>Software Released Date</b>	The time when running the software	Read Only
<b>Hardware Version</b>	The hardware version of the current device	Read Only
<b>Date and Time</b>	The device system time	Read Only
<b>Operation Hours</b>	The system running time	Read Only
<b>CPU Usage</b>	The system's CPU usage.	Read Only
<b>Memory Usage</b>	The memory usage of the device system	Read Only
<b>Configuration Usage</b>	Configuration space usage of the device system	Read Only

### 1.6.7 Configurations - ARP Table

Each switch has an ARP table to store the IP addresses and MAC addresses of the network devices.

IP Address	MAC Address	Interface
192.168.1.138	5005F3-BA92E9	ip0

### 1.6.8 Configurations - Software Upgrade

System Information	
Product Model	FR-7M3208S
Software Released Time	2021-05-24 10:16:34
Software Version	V1.0

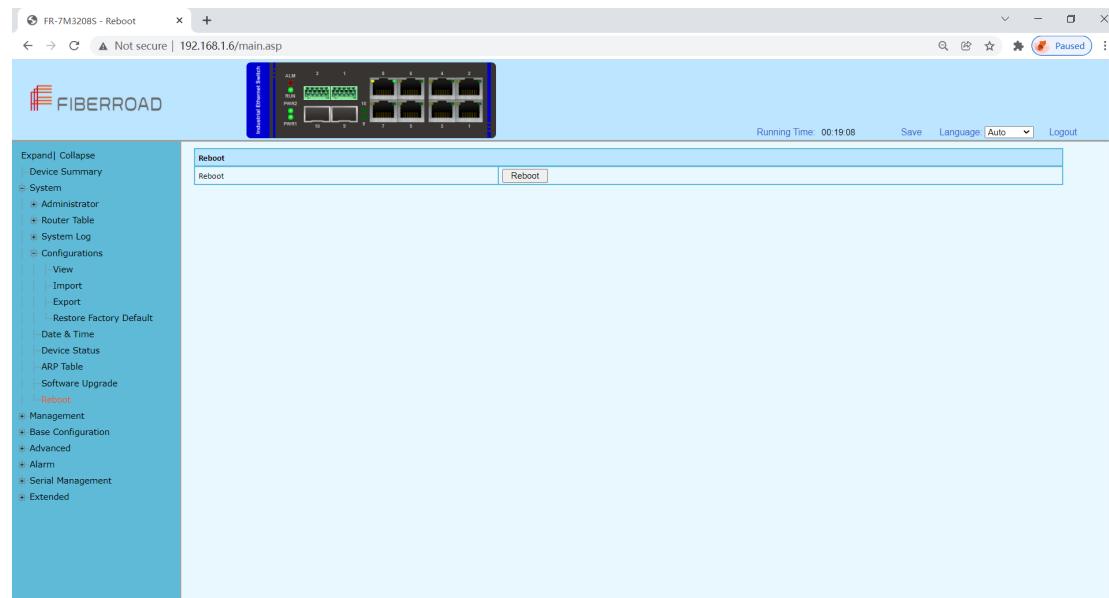

Software Upgrade	
Software Upgrade	<input type="button" value="Browse..."/>
<input type="button" value="Submit"/>	

#### Configuration Step

1, On the [Software Upgrade] interface, click [Browse] to select the upgrade file to be imported. (The upgrade files are generally of the form .ub and .urk. Marked with "b" for BOOT files and "r" for "File System". The file is marked with k for the file with the kernel. Click [Submit]. The system starts uploading the upgrade file. After the upload is complete, the device automatically restarts to update the software after the upgrade is complete.

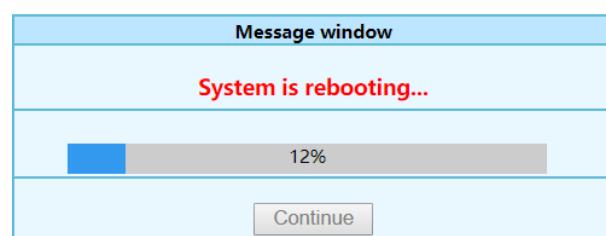

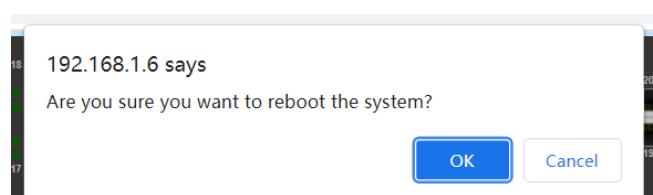

2, During the software upgrade, make sure that the device is powered up until the upgrade is completed.

### 1.6.9 Configurations - Reboot

#### Configuration Step

1. Select [System / Configurations / Reboot] in the navigation bar to enter the [Reboot] interface
2. Click [Reboot] and the 'Confirm Restart' dialog box will pop up. Click OK to restart the device. A restart progress bar is displayed. Click [Cancel] to cancel the restart of the device.

## Chapter 2 Management Configurations

This chapter describes the port configuration in detail, including but not limit to the following:

- ❖ IP Interface
- ❖ SNMP
- ❖ LLDP

## 2. Management

### 2.1.1 Management - IP Interfaces - Settings

Name	IP Address	IPv6 Address	VLAN
ip0	DHCP : Disabled 192.168.1.6/24(static)	IPV6 : Disabled	1

IP (Internet Protocol Address) is short for IP Address. IP address is a unified address format provided by the IP protocol, which assigns a logical address to each network and host on the Internet to mask physical address differences.

### Configuration Steps

1. Select [Management / IP Interface / Setting] in the navigation bar to enter the IP interface [Setting].
2. All current IP interface and configuration information can be viewed in the IP interface [Setting].
3. To add a new IP interface, click [Add], then fill in the relevant configuration, and click [Apply].
4. To modify an IP interface, check the corresponding IP interface, click [modify], then modify the configuration, and click [Apply], the IP interface is shown.
5. To delete an IP interface, check the appropriate IP interface and click [Delete].

<b>Setting</b>	
Static IP Address	<input type="text"/> IPv4(A.B.C.D)
Subnet Mask	<input type="text"/> IPv4(A.B.C.D)
VLAN	<input type="text"/> <1-4094>
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

Item	Description	Notes
<b>Static IP Address</b>	Static IPv4 address, the format is dotted decimal system, each interface IPv4 address can not be in the same network segment.	A.B.C.D
<b>Mask</b>	The mask of IPv4 address	A.B.C.D
<b>VLAN</b>	VLAN bound by assigned IP interface	<1 – 4094>

## 2.1.2 Management - IP Interfaces - DHCP Client

### Configuration Step

1,Select [Management / IP Interface / DHCP Client] in the navigation bar to enter the [DHCP Client] interface.

2,In the [DHCP Client] interface, you can view the current configuration information and DHCP client status.

Item	Description	Notes
<b>Admin Status</b>	Enable/Disable	Default: Disable
<b>Renew</b>	DHCP Client renew the configuration	
<b>Release</b>	DHCP Client release the current configuration	
<b>Refresh</b>	Refresh the configuration	

### 2.1.3 Management - IP Interfaces - DHCP Client(IPv6)

#### Configuration Steps

1,Select [Management / IP Interface / DHCP Client(IPv6] in the navigation bar to enter the [DHCP Client(IPv6)] interface.

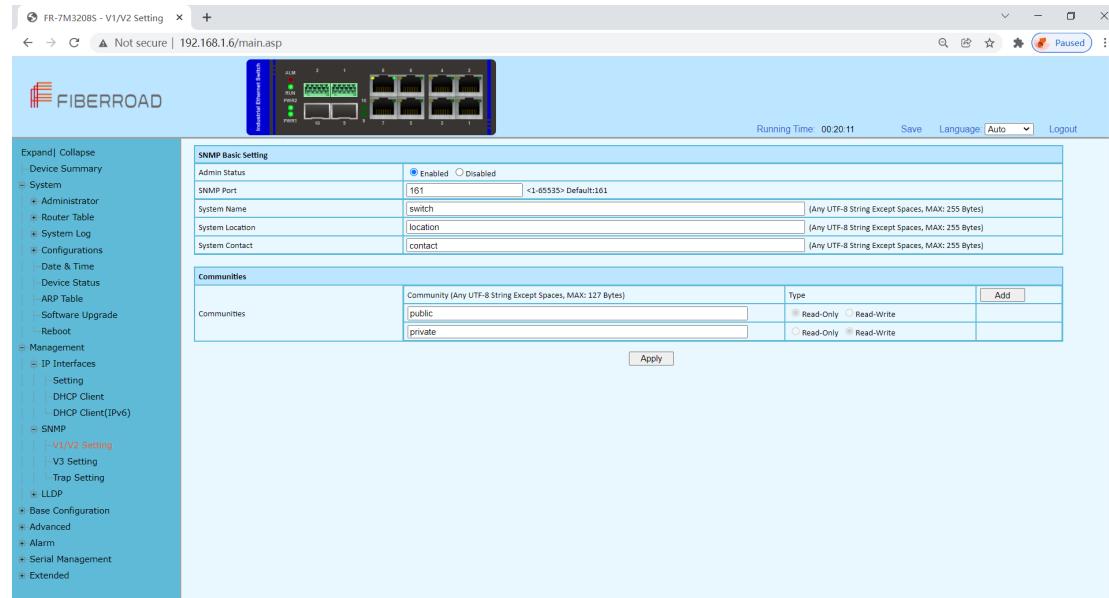

2,In the [DHCP Client(IPv6)] interface, you can view the current configuration information and DHCP client status.

Item	Description	Notes
<b>Admin Status</b>	Enable/Disable	Default: Disable
<b>Renew</b>	DHCP Client renew the configuration	
<b>Release</b>	DHCP Client release the current configuration	
<b>Refresh</b>	Refresh the configuration	

## 2.2 Management - SNMP

### 2.2.1 Management -SNMP - v1/v2 setting

The Simple Network Management Protocol (**SNMP**) is an Internet Standard protocol that is based on the manager/agent model with a simple request/response format. The network manager issues a request and the managed agents will send responses in return.

### Configuration Steps

1. Select [Management / SNMP / V1/V2 Setting] in the navigation bar to enter the SNMP interface.
2. You can view the Base Setting of SNMP in the [SNMP Base Setting] interface.
3. To modify the Base Configuration, modify the corresponding configuration in the configuration box, and then click [Apply] to make effective.
4. If you want to add a group word, click [Add] and a group word is added to set the group word name and type. The system supports up to eight group characters, with the first and second being the default, so you can add up to six more. Click [Apply] to make effective.
5. To delete a group word, click [Delete] on the right corresponding entry (the first and second are the system default, cannot be deleted), and click [Apply] to make effective.

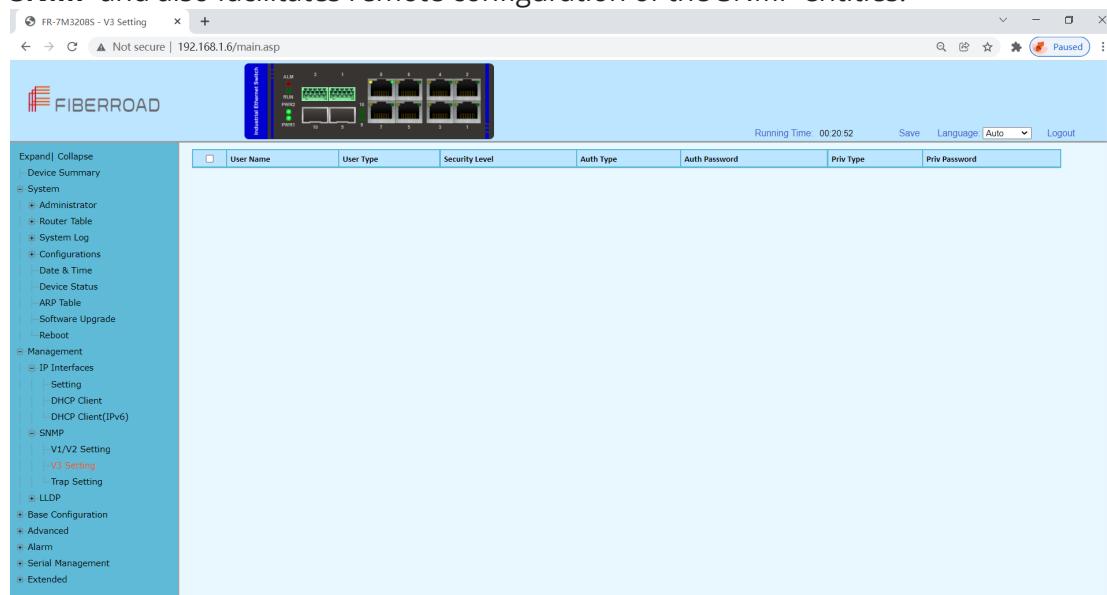

Item	Description	Notes
<b>Admin Status</b>	Enable / Disable	Default: Enable
<b>SNMP Port</b>	SNMP port with Range <1-65535>	Default: 161
<b>SNMP Name</b>	System name, any legal character other than a space can be entered with a maximum length of 255	
<b>System Location</b>	System location information, any legal character other than a space can be entered with a maximum length of 255	
<b>System Contact</b>	System contact information, any legal character other than a space can be entered with a maximum length of 255	

## Communities

**Name:** Any legal character other than a space can be entered with a maximum length of 127  
**Type:** Read and write  
**Note:** The system supports a maximum of 8 group characters and requires at least two group characters. The default two group characters can only change the group name, cannot change the type or delete. Click [Add] to add a group character, add a group character can change the name and type, and delete.

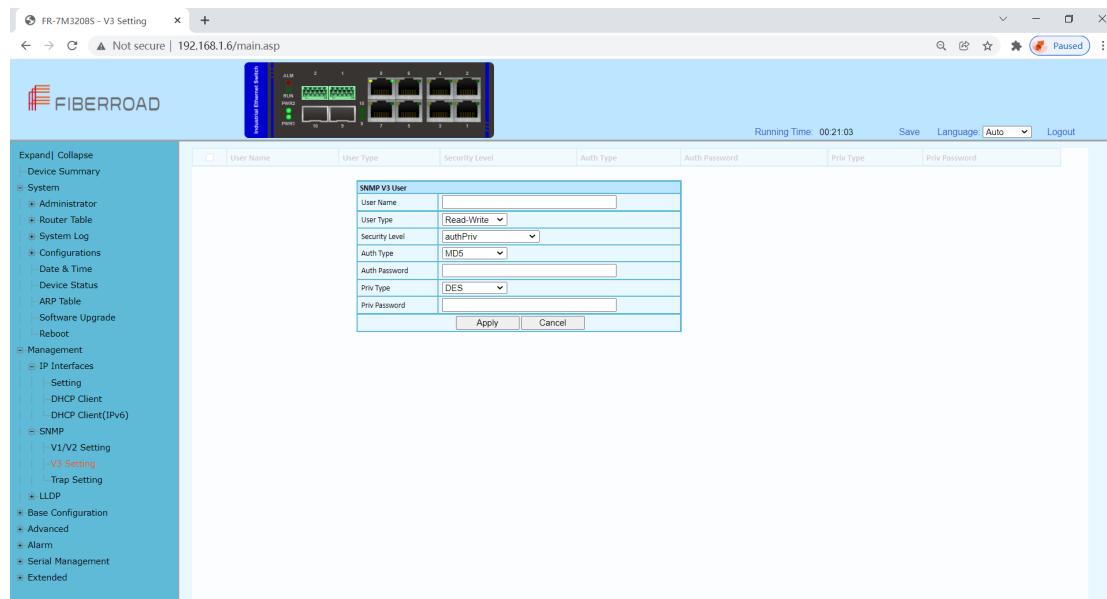

### 2.2.2 Management – SNMP – v3 setting

SNMPv3 addresses issues related to the large-scale deployment of SNMP, accounting, and fault management. Currently, SNMP is predominantly used for monitoring and performance management. SNMPv3 defines **a secure version of SNMP** and also facilitates remote configuration of the SNMP entities.

### Configuration Steps

1. Select [Management / SNMP V3 Setting] in the navigation bar to enter the SNMP interface.
2. You can view the Base Setting of SNMP in the [SNMP Base Setting] interface.
3. To modify the Base Configuration, modify the corresponding configuration in the configuration box, and then click [Apply] to make effective.
4. If you want to add a group word, click [Add] and a group word is added to set the group word name and type. The system supports up to eight group characters, with the first and second being the default, so you can add up to six more. Click [Apply] to make effective.
5. To delete a group word, click [Delete] on the right corresponding entry (the first and second are the system default, cannot be deleted), and click [Apply] to make effective.

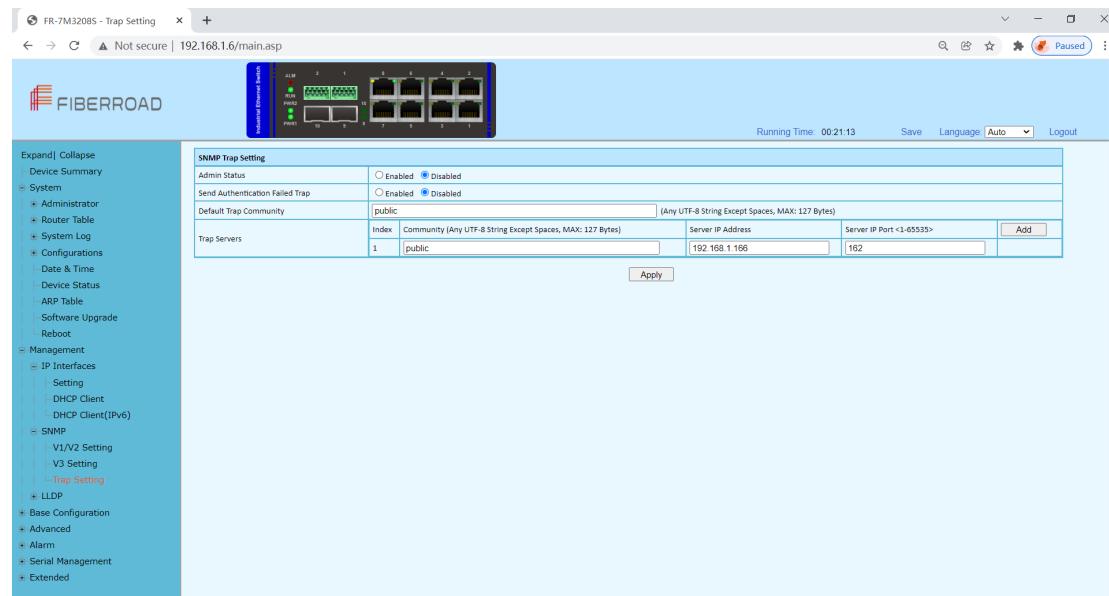

Item	Description	Notes
<b>User Name</b>	As Needed	
<b>User Type</b>	Read-Write/ Read-Only <b>NoAuthNoPriv:</b> Communication without authentication and privacy. <b>AuthNoRiv:</b> Communication with authentication an witout privacy. <b>AuthRriv:</b> Communication with authentication and privacy. <b>NoAuthNoPriv can't support</b> <b>MD5:</b> The MD5 message-digest algorithm is a cryptographically broken but still widely used hash function producing a 128-bit hash value.	
<b>Security Level</b>	<b>SHA:</b> In cryptography, SHA-1 (Secure Hash Algorithm 1) is a cryptographic hash function which takes an input and produces a 160-bit (20-byte) hash value known as a message digest – typically rendered as a hexadecimal number, 40 digits long.	
<b>Auth Type</b>	<b>Only supports AuthPriv level</b> <b>DES:</b> DES is based on the Feistel structure where the plaintext is divided into two halves. DES takes input as 64-bit plain text and 56-bit key to produce 64-bit Ciphertext.	
<b>Auth Password</b>	As Needed <b>AES:</b> AES algorithm takes 128-bit plaintext and 128-bit secret key which together forms a 128-bit block which is depicted as 4 X 4 square matrix.	
<b>Priv Type</b>		

Priv Password | As Needed

### 2.2.3 Management - SNMP - Trap Setting

The Simple Network Management Protocol (SNMP) is an Internet-standard protocol used to manage devices on IP networks. The SNMP messages are used to inspect and communicate information about managed objects. The Trap message is one of the types of SNMP messages which are generated to report system events.

### Configuration Steps

1. Select [Management / SNMP / Trap Setting] in the navigation bar and enter the SNMP [Trap Setting] interface.
2. The current trap configuration of SNMP can be viewed in the SNMP [Trap Setting] interface.
3. If you need to modify the Trap Setting, modify the corresponding configuration in the configuration box, and then click [Apply].
4. If you want to add a Trap server, click [Add] and the Trap server entry will occur. The system supports up to 4 groups of Trap servers, the first group is the default of the system and cannot be deleted, so you can add up to 3 groups of Trap servers, click [Apply] to make effective.
5. If you want to delete the Trap server, click [Delete] on the right of the corresponding entry (where group 1 is the default of the system and cannot be deleted), and click [Apply] to make effective.

SNMP Trap Setting			
Admin Status	<input type="radio"/> Enabled <input checked="" type="radio"/> Disabled		
Send Authentication Failed Trap	<input type="radio"/> Enabled <input checked="" type="radio"/> Disabled		
Default Trap Community	public (Any UTF-8 String Except Spaces, MAX: 127 Bytes)		
Trap Servers	Index	Community (Any UTF-8 String Except Spaces, MAX: 127 Bytes)	Server IP Address
	1	public	192.168.1.166
		Server IP Port <1-65535>	162
<input type="button" value="Add"/>			
<input type="button" value="Apply"/>			

Item	Description	Notes
<b>Admin Status</b>	Enable / Disable	Default: Enable
<b>Send Authentication Failed Trap</b>	<b>Enable:</b> Enable the Sending SNMP Authentication Failed Trap <b>Disable:</b> Disable the Sending SNMP Authentication Failed Trap	Default:Disable
<b>Default Trap Community</b>	Default trap Community characters, any legal character other than a space can be entered with a maximum length of 127 <b>Community Characters:</b> Any legal character other than a space can be entered with a maximum length of 127	
<b>Trap Server</b>	<b>Server IP Address:</b> The IP address of trap serve, IPv4, dot decimal format. <b>Server IP Port:</b> The IP port of trap serve, range <1-65535>, default 162 Note: The system supports up to 4 servers. Click the [Add]to add. The system default server number:1, <b>community character:</b> public, IP address: 192.168.1.166, IP port: 162. The default server cannot be deleted, but the added server can be deleted.	

## 2.3 Management - LLDP

### 2.3.1 Management - LLDP - Global Setting

LLDP can be used in scenarios where you need to work between devices which are not Fiberroad proprietary and devices which are Fiberroad proprietary. You can use the LLDP protocol for troubleshooting purposes. The switch gives all the information about the current LLDP status of ports and you can use this information to fix connectivity problems within the network.

### Configuration Steps

1. Select [Management / LLDP / Global Setting] in the navigation bar to enter the LLDP [Global Setting] interface.
2. The LLDP global configuration can be viewed in the LLDP [Global Setting] interface.
3. Modify the corresponding LLDP configuration in the LLDP [Global Setting] interface, and then click [Apply].

LLDP global setting		
LLDP admin status	Disabled	
Transmit interval	30	<5-32768> Default:30 second
Hold multiplier	4	<2-10> Default:4
Reinit delay	2	<1-10> Default:2 second
Trap interval	30	<5-3600> Default:30 second
Transmit credit num	5	<1-100> Default:5
Fast transmit interval	1	<1-3600> Default:1 second
Fast transmit num	4	<1-8> Default:4

Apply

Item	Description	Notes
<b>LLDP admin status</b>	Enable / Disable	Default: Disable
<b>Transmit interval</b>	LLDP transmit interval range 5-32768	Default: 30
<b>Hold multiplier</b>	LLDP hold multiplier range 2-10	Default: 4
<b>Reinit delay</b>	LLDP reinit delay range 1-10	Default: 2
<b>Trap interval</b>	LLDP trap interval range 5-3600	Default: 30
<b>Transmit credit num</b>	LLDP transmit credit num range 1-100	Default: 5
<b>Fast transmit interval</b>	LLDP fast transmit interval range 1-3600	Default: 1

Fast transmit num | LLDP fast transmit num range 1-8

Default: 4

### 2.3.2 Management - LLDP - Port Configurations

Port	Destination address	Admin Status	Transmit interval (s)	Hold multiple (s)	Relint delay (s)	Trap interval (s)	Transmit credit n um	Fast transmit num(s)	Trap enable	TUVs transmit enable
GE/1	0180C2-00000E	Disabled	0	0	0	0	0	0	Disabled	
GE/2	0180C2-00000E	Disabled	0	0	0	0	0	0	Disabled	
GE/3	0180C2-00000E	Disabled	0	0	0	0	0	0	Disabled	
GE/4	0180C2-00000E	Disabled	0	0	0	0	0	0	Disabled	
GE/5	0180C2-00000E	Disabled	0	0	0	0	0	0	Disabled	
GE/6	0180C2-00000E	Disabled	0	0	0	0	0	0	Disabled	
GE/7	0180C2-00000E	Disabled	0	0	0	0	0	0	Disabled	
GE/8	0180C2-00000E	Disabled	0	0	0	0	0	0	Disabled	
GE/9	0180C2-00000E	Disabled	0	0	0	0	0	0	Disabled	
GE/10	0180C2-00000E	Disabled	0	0	0	0	0	0	Disabled	

### Configuration Steps,

1. Select [Management / LLDP / Port Configuration] in the navigation bar to enter the LLDP [Port Configuration] interface
2. The LLDP port corresponding configuration can be viewed in the LLDP [Port Configuration] interface
3. Choose the LLDP configuration of all ports corresponding to any destination address 0180C2-00000E, 0180C2-000003, 0180C2-000000 in the LLDP [Port Configuration] interface
4. To modify the LLDP configuration of a destination address port, click [Modify] after selecting the destination address, and enter the port configuration interface
4. Select or fill out the configuration items that need to be modified, and click [Apply] to make effective. There will be a corresponding prompt if the configuration item is incorrectly filled.

<i>Item</i>	<i>Description</i>	<i>Notes</i>
<i>Destination Address</i>	0180C2-00000E 0180C2-000003 0180C2-000000	

#### Remarks :

- 0x0180-C200-000E for LLDP frames destined for nearest bridge agents.  
 0x0180-C200-0000 for LLDP frames destined for nearest customer bridge agents.  
 0x0180-C200-0003 for LLDP frames destined for nearest non-TPMR bridge agents.

Item	Description	Notes
<b>Admin Status</b>	<p><b>Transmit Only:</b> Enable LLDP port transmit function</p> <p><b>Receive Only:</b> Enable LLDP port receive function</p> <p><b>Transmit and receive:</b> Enable LLDP port transmit and receive function</p> <p><b>Disable:</b> Disable LLDP port transmit and receive function</p> <p>Default: Use[Global Setting] transmit interval</p>	Default: Disable
<b>Transmit Interval(s)</b>	LLDP transmit interval range 5-32768	Default: Use[Global Setting] hold multiplier
<b>Hold Multiplier</b>	LLDP hold multiplier range 2-10	Default: Use[Global Setting] reinit delay
<b>Reinit Delay(s)</b>	LLDP reinit delay range 1-10	Default: Use[Global Setting] trap interval
<b>Trap Interval(s)</b>	LLDP trap interval range 5-3600	Default: Use[Global Setting] Transmist credit num
<b>Transmist credit num</b>	LLDP transmit credit num range 1-100	Default: Use[Global Setting] Fast transmit interval
<b>Fast transmit interval(s)</b>	LLDP fast transmit interval range 1-3600	Default: Use[Global Setting] Fast transmit num
<b>Fast transmit num</b>	LLDP fast transmit num range 1-8	Default: Use[Global Setting] Trap enable
<b>Trap enable</b>	Enable / Disable	Port Description
<b>TLVs transmit enable</b>	System Name	System Description
		System Capabilities

## Chapter 3 Base Configuration

This chapter describes the port configuration in detail, including but not limit to the following:

- ❖ Ports
- ❖ VLAN
- ❖ QOS
- ❖ FDB

### 3 Base Configuration

#### 3.1.1 Base Configuration-Port-Status And Setting

##### Configuration Steps

Port	Running Status						Admin Status					
	Link Status	Port Type	Speed	Duplex	Rx Rate(bps)	Tx Rate(bps)	Admin Status	Speed	Duplex	Flow Control	EEE	Setting
GE/1	Link Down	Copper	10M	Half	0.00	0.00	On	Auto	Auto	Off	Disabled	[Modify]
GE/2	Link Down	Copper	10M	Half	0.00	0.00	On	Auto	Auto	Off	Disabled	[Modify]
GE/3	Link Down	Copper	10M	Half	0.00	0.00	On	Auto	Auto	Off	Disabled	[Modify]
GE/4	Link Down	Copper	10M	Half	0.00	0.00	On	Auto	Auto	Off	Disabled	[Modify]
GE/5	Link Down	Copper	10M	Half	0.00	0.00	On	Auto	Auto	Off	Disabled	[Modify]
GE/6	Link Down	Copper	10M	Half	0.00	0.00	On	Auto	Auto	Off	Disabled	[Modify]
GE/7	Link Down	Copper	10M	Half	0.00	0.00	On	Auto	Auto	Off	Disabled	[Modify]
GE/8	Link Up	Copper	1000M	Full	23.44K	20.32K	On	Auto	Auto	Off	Disabled	[Modify]
GE/9	Link Down	Fiber	10M	Half	0.00	0.00	On	Fiber-Auto	Full	Off	Disabled	[Modify]
GE/10	Link Down	Fiber	10M	Half	0.00	0.00	On	Fiber-Auto	Full	Off	Disabled	[Modify]

1. Select [Base Configuration / Ports / Status and Setting] in the navigation bar to enter the [Status and Setting] interface.
2. The Status and Settings interface shows the operating status and configuration information for each port.

Setting	
Port	GE/1
Link Status	Link Down
Admin Status	On
Fiber Mode	Fiber-Auto
EEE	Disabled
Apply      Cancel	

3. If you need to modify the configuration of a port, just click the [Modify] on the right side corresponding entry. to enter the modification interface and modify the corresponding configuration item. Click the [Apply] to complete the modification,

and click the [Cancel] to cancel the modification.

Item	Description	Notes
<b>Port</b>	The name and number of the port	
<b>Link Status</b>	 Indicates that the port is linked up  Indicates that the port is linked down	
<b>Port Type</b>	Copper or Fiber Port	
<b>Rate</b>	The port working speed, unconnected port is always displayed as 10M	
<b>Duplex</b>	The port working duplex mode, the unconnected port always shows half duplex	
Item	Description	Notes
<b>Port</b>		Read Only
<b>Link Status</b>		Read Only
<b>Admin Status</b>	ON/OFF	Default: ON
<b>Fiber Mode</b>	Fiber-Auto Fiber-100M Fiber-1000M	Default: Fiber-Auto
<b>EEE</b>	Energy Efficient Ethernet Enabled / Disabled	Default: Disabled

Remarks: Energy Efficient Ethernet (EEE) is an IEEE 802.3az standard that is designed to reduce power consumption in ethernet network during idle periods.

### 3.1.2 Base Configuration-Port-Statistics

The screenshot shows the 'FR-7M3208S - Statistics' page from a web browser. The URL is 192.168.1.6/main.asp. The interface has a top bar with 'Running Time 00:26:28', 'Save', 'Language Auto', and 'Logout'. On the left is a navigation menu with sections like System, Configurations, Base Configuration, Ports, VLAN, QoS, and FDB Table. The 'Ports' section is expanded, showing 'Status And Setting', 'Statistics' (which is selected), 'Sfp Information', 'Sfp Detail Information', and 'Traffic'. The 'Statistics' section for Port GE/1 to GE/10 is shown, each with a 'Clear' button. Below this is a table with columns for Rx Bytes, Rx Packets, Rx Unicast Packets, Rx Multicast Packets, Rx Broadcast Packets, Rx Discards Packets, Rx Pause Packets, Drop Events, and Fragments. At the bottom are 'Clear All' and 'Refresh' buttons.

#### Configuration Steps

1. Select [Base Configuration / Ports / Statistics] to enter the port [Statistics] page
2. The [Statistics] shows each port statistical information. You can expand corresponding port statistics by clicking flag on the left of port entry, and click cleared button on the right to clear the statistics of the port.
3. Click the [Refresh] to update the statistics of all ports. Click [Clear All] to clear the statistics for all ports.

Item	Description	Notes
<b>Rx / Tx Packets</b>	Total received / sent packets	
<b>Rx / Tx Unicast Packets</b>	Total received / sent unicast packets	
<b>Rx / Tx Multicast Packets</b>	Total received / sent multicast packets	
<b>Rx / Tx Broadcast Packets</b>	Total received / sent broadcast packets	
<b>Rx / Tx Discards Packets</b>	Total received / sent discarded packets	
<b>Rx / Tx Pause Packets</b>	Total received / sent flow control packets	
<b>Drop Events</b>	Drop messages (interval sampling)	
<b>FCS Errors</b>	FCS error packet	
<b>Fragments</b>	Fragment packets (less than 64 bytes)	

### 3.1.3 Base Configuration-Port-SFP Information

The screenshot shows the FIBERROAD Serial over Ethernet Switch web interface. The left sidebar contains a navigation tree with categories like Device Summary, System, Management, Base Configuration, and VLAN. The 'Sfp Information' link under 'Base Configuration' is highlighted. The main content area displays a table for SFP information across two ports (GE/9 and GE/10). The table includes columns for Port, Status, Wavelength(nm), Distance(m), Bit Rate(MBd), Ethernet Codes, DDM, Calibrated, Tx Power(dBm), Rx Power(dBm), Temperature(°C), Voltage(V), and Current(mA). Both ports show 'Removed' status and 'N/A' values for all other parameters. A 'Refresh' button is located at the bottom of the table.

Port	Status	Wavelength(nm)	Distance(m)	Bit Rate(MBd)	Ethernet Codes	DDM	Calibrated	Tx Power(dBm)	Rx Power(dBm)	Temperature(°C)	Voltage(V)	Current(mA)
GE/9	Removed	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
GE/10	Removed	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A

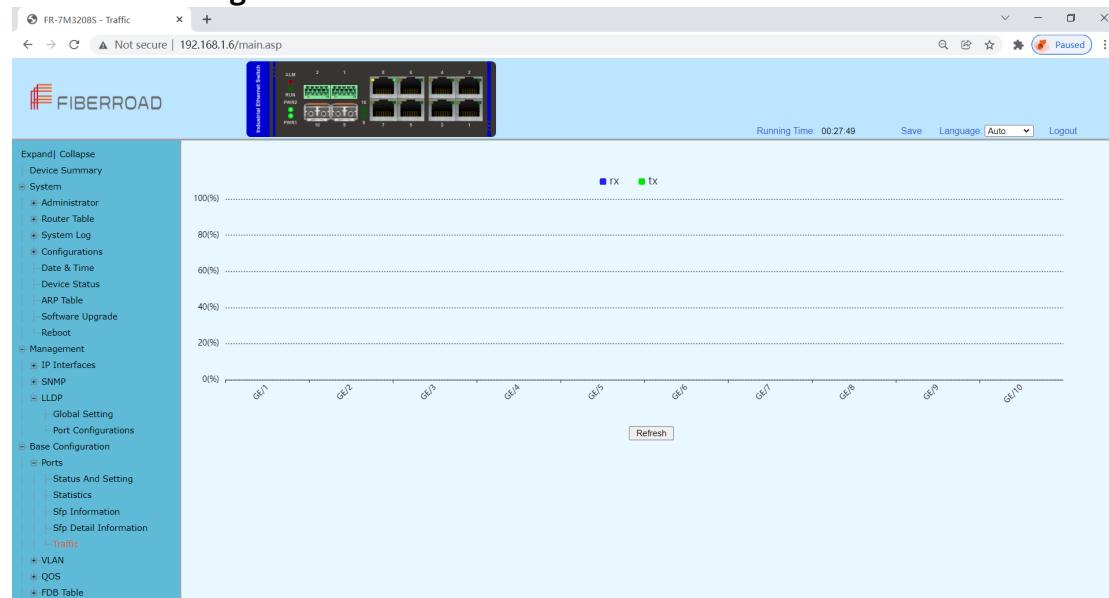

Item	Description	Notes
<b>Port</b>	The name of information	Read Only
<b>Status</b>	Removed / Inserted	Read Only
<b>Wavelength</b>	Operating Wavelength	Read Only
<b>Distance(m)</b>	SFP effective transmission distance	Unit: Meter
<b>Bit Rate</b>	N/A / Bit Rata	Unit: MBd
<b>Ethernet Codes</b>	N/A / Fiber-100M / Fiber-1000M	Read Only
<b>DDM</b>	N/A / Supported	Read Only
<b>Calibrated</b>	N/A / Internally / Externally	Read Only
<b>Tx Power(dBm)</b>	Transmitter optical power	Unit: dBm
<b>Rx Power(dBm)</b>	Receiver optical power	Unit: dBm
<b>Temperature(°C)</b>	SFP operating temperature	Unit: °C
<b>Voltage(V)</b>	SFP Voltage	Unit: V
<b>Crrent(mA)</b>	SFP Current	Unit: mA

### 3.1.4 Base Configuration-Port-SFP Detail Information

The screenshot shows the 'Sfp Detail Infor' page of the FIBERROAD Serial over Ethernet Switch. The left sidebar contains a navigation menu with options like System, Management, and Ports. The main content area displays a table for Port GE/9 with the following data:

Status	Inserted	Ethernet Codes	1000BASE-LX	Mode	Single Mode
Wavelength(nm)	1310	Distance(m)	20000	Bit Rate(MBd)	1000
Vendor Name	OEM	OUI	00-00-00	PIN	SFP
Version	000	SN	HWS3207001557	Date	2020-07-04
Connector Type	LC	DDM	Supported	Calibrated	Internally
Tx Power(dBm)	-7.06	Rx Power(dBm)	-inf	Temperature(°C)	17.96
Voltage(V)	3.32	Current(mA)	8.20		

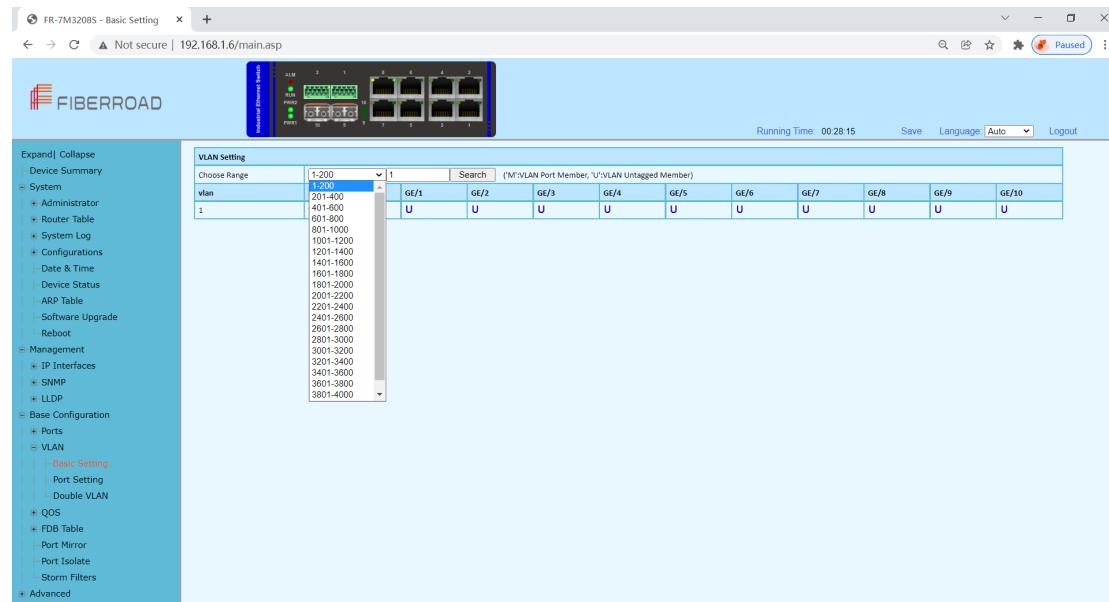

### 3.1.5 Base Configuration-Port-Traffic

Remarks: Real-time traffic statistics of each ports.

## 3.2 Base Configuration - VLAN

### 3.2.1 Base Configuration-VLAN-Basic Setting

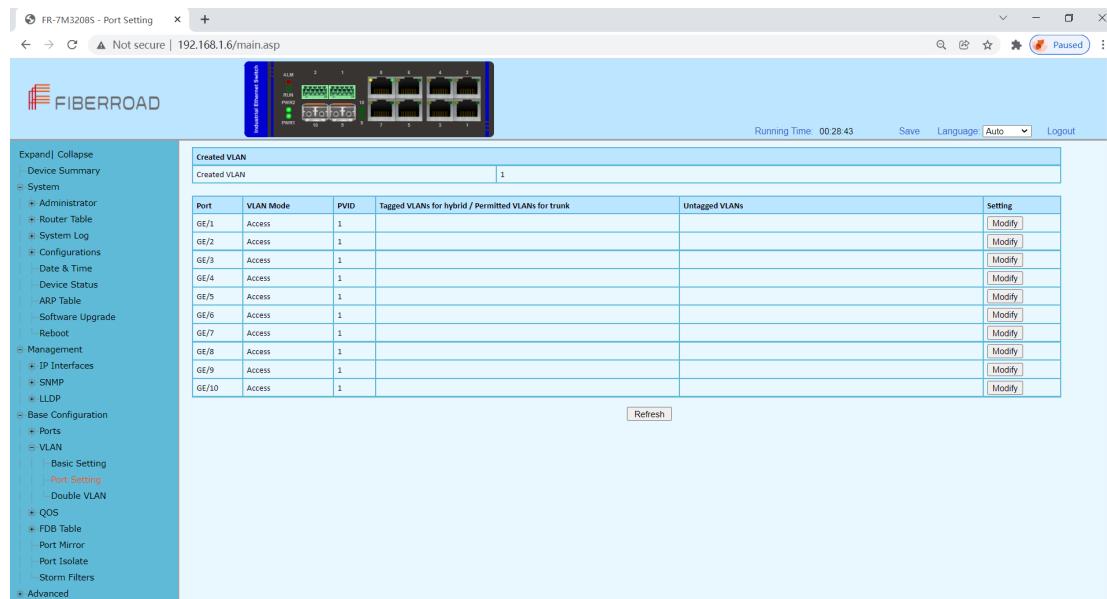

### Configuration Steps

1. Select [Base Configuration / VLAN / Basic Setting] to enter the VLAN [Basic Setting] interface.
2. On [Basic Setting] interface, you can view the related configuration information of each VLAN. If you want to find information about a VLAN ID, select the range of the VLAN ID in the drop-down box, enter the specified VLAN ID in the input box, and click [Search].
3. To add, modify, or delete VLANs, click [Setting]. Enter the VLAN to be added, modified, or deleted in the <VLAN list> box on setup interface. Then select Add, Modify, or Delete. Click [Apply]. The setting and modification options can only modify the VLAN name

Basic Setting	
Created VLAN	1
VLAN List	<input type="text"/> Example:1-10,13,15-4094
	<input checked="" type="radio"/> Add <input type="radio"/> Delete <input type="radio"/> Modify Name: <input type="text"/>
	<input type="button" value="Apply"/> <input type="button" value="Cancel"/>

Item	Description	Notes
<b>Choose Range</b>	To search for a VLAN ID	
<b>Search</b>	1. Select the interval where the VLAN to be searched in the interval selection box;	
	2. If you enter a specific VLAN ID in the input box, for example 11, the information bar with the VLAN number 11 turns yellow;	
	3. If there is no such VLAN, the corresponding information is prompted.	
<b>Top</b>	Display the first page of VLAN information	
<b>Bottom</b>	Display the last page of VLAN information	
Item	Description	Notes
<b>VLAN List Box</b>	It is to input the VLAN list to be set and supports multi-VLAN batch input, such as 1,2,3,4-10	
<b>Add</b>	To add the VLAN that is entered in the VLAN list box. VLAN 1 is the default VLAN.	
	It already exists and does not need to be created	
<b>Delete</b>	To delete the VLAN input in the VLAN list box. VLAN 1 is the default VLAN and cannot be deleted.	
<b>Modify</b>	To modify the VLAN input in the VLAN list box. The VLAN name can be modified. The new name needs to be entered in the name box.	

### 3.2.2 Base Configuration-VLAN-Port Setting

#### Configuration Steps

1. Select [Base Configuration / VLAN / Port Setting] to enter the VLAN Port Setting interface.
2. On the [Port Setting] interface, you can view the VLAN related configuration information of each port.
3. To modify the VLAN configuration of a port, click [Modify] in the corresponding port display field to enter the port setting interface,
4. Select or fill in the configuration items that need to be modified and click [Apply]. There will be prompts if the configuration item is filled in incorrectly.

Port Setting	
Port	GE/1
VLAN Mode	trunk
PVID	39 <1-4094>
Permitted VLAN	<input type="radio"/> Replace <input type="radio"/> Add <input type="radio"/> Delete <input checked="" type="radio"/> All Created VLAN Example:1-10,13,15-4094
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

Item	Description	Notes
Port	Port Name Information	
VLAN Mode	<b>Access:</b> Access mode <b>Trunk:</b> Trunk mode <b>Hybrid:</b> Hybrid mode	
PVID	Port PVID	<1-4094>

**Tagged VLAN**

List of VLANs allowed to pass through the port. It supports batch input of multiple VLANs. For example: '1,2,3,4-10';  
**Add:** Add the tagged VLAN to the port as the input VLAN;  
**Delete:** Delete the VLAN from the tagged VLAN of the port;  
**Replace:** Replace the original tagged VLAN of the port with the input VLAN;  
**All created VLANs:** All the created VLANs are tagged VLANs of the port. Even if they are created later, they will be automatically added to the tagged VLAN of the port.

**Untagged VLAN**

Port untagged VLAN list, supports multi-VLAN batch input, such as: "1,2,3,4-10";  
**Add:** Add the incoming VLAN to the untagged VLAN of the port;  
**Delete:** Delete the incoming VLAN from the untagged VLAN of the port.  
**Replace:** Replace the original untagged VLAN of the port with the input VLAN.

**3.2.3 Base Configuration-VLAN-Double VLAN**

Port	Mode	Outer PVID	Ingress Mode	Egress Mode
*	Disabled	1	All	Untagged
GE/1	Disabled	1	All	Untagged
GE/2	Disabled	1	All	Untagged
GE/3	Disabled	1	All	Untagged
GE/4	Disabled	1	All	Untagged
GE/5	Disabled	1	All	Untagged
GE/6	Disabled	1	All	Untagged
GE/7	Disabled	1	All	Untagged
GE/8	Disabled	1	All	Untagged
GE/9	Disabled	1	All	Untagged
GE/10	Disabled	1	All	Untagged

Item	Description	Notes
<b>Port</b>	Port Name Information	Read Only
<b>Mode</b>	Enabled / Disabled	Default: Disabled
<b>Outer PVID</b>	1, 33-46	
<b>Ingress Mode</b>	All / Tagged / Untagged	Default : All
<b>Egress Mode</b>	Tagged / Untagged	Default: Untagged

**3.3 Base Configuration-QOS**

### 3.3.1 Base Configuration-QoS- Mapping -802.1p Priority

The 802.1p determines the packet's queue in the outbound port on the switch.

1. Select [Base Configuration / QOS / Mapping / 802.1p Priority] in the navigation bar to enter the QOS [802.1p Priority] interface.
2. On the QOS [802.1p Priority] interface, you can view the mapping from 802.1p priorities to local priorities.
3. To modify the mapping relationship, click [Modify] and select the mapped local priority for the corresponding 802.1p priority in drop-down list box.

Item	Description	Notes
<b>Modify</b>	Modify the mapping between 802.1p priorities and local priorities	

### 3.3.2 Base Configuration-QoS- Mapping – DSCP Priority

DSCP is a 6-bit packet header value used for traffic classification and priority assignment.

The screenshot shows the 'DSCP Priority' configuration page of the FIBERROAD FR-7M3208S switch. The left sidebar contains a navigation tree with options like Device Summary, System, Configurations, Management, QoS, and FDB Table. The main area displays a table titled 'DSCP Priority Mapping' with columns for DSCP Priority (values 0-7) and Local Priority (values 0-7). The table shows a many-to-one mapping where multiple DSCP values map to the same Local Priority. For example, DSCP 0 maps to Local 0, while DSCPs 1, 2, 3, 4, 5, 6, and 7 all map to Local 0. Buttons at the bottom right of the table allow for 'Apply' and 'Back' actions.

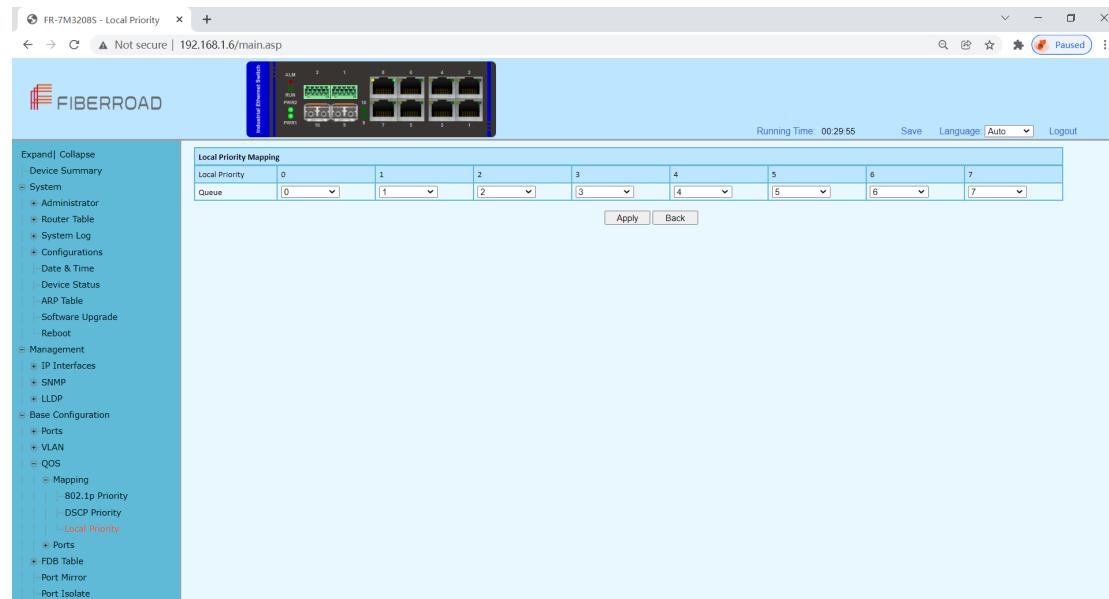

DSCP Priority	0	1	2	3	4	5	6	7
Local Priority	0	0	0	0	0	0	0	0
DSCP Priority	8	9	10	11	12	13	14	15
Local Priority	1	1	1	1	1	1	1	1
DSCP Priority	16	17	18	19	20	21	22	23
Local Priority	2	2	2	2	2	2	2	2
DSCP Priority	24	25	26	27	28	29	30	31
Local Priority	3	3	3	3	3	3	3	3
DSCP Priority	32	33	34	35	36	37	38	39
Local Priority	4	4	4	4	4	4	4	4
DSCP Priority	40	41	42	43	44	45	46	47
Local Priority	5	5	5	5	5	5	5	5
DSCP Priority	48	49	50	51	52	53	54	55
Local Priority	6	6	6	6	6	6	6	6
DSCP Priority	56	57	58	59	60	61	62	63
Local Priority	7	7	7	7	7	7	7	7

1. Select [Base Configuration / QOS / Mapping / DSCP Priority] in the navigation bar to enter the QOS DSCP Priority Mapping interface.
2. On the QOS [DSCP Priority] interface, you can view the mapping from DSCP priorities to local priorities.
3. To modify the mapping relationship, click [Modify] and select the mapped local priority for the corresponding DSCP priority in drop-down list box

Item	Description	Notes
<b>Modify</b>	Modify the mapping between DSCP priorities and local priorities	

### 3.3.3 Base Configuration-QoS- Mapping – Local Priority

The local priority is assigned to the local clock and is used if needed when the data associated with the local clock is compared with data on another potential grandmaster (or the master) clock.

1. Select [Base Configuration / QOS / Mapping / Local Priority] in the navigation bar to enter the QOS Local Mapping.
2. You can view the mapping from the local priority to the egress queue on the QOS [Local Priority] interface.
3. To modify the mapping relationship, click [Modify] and select the mapped egress queue for the corresponding local priority in drop-down list box.

Item	Description	Notes
<b>Modify</b>	Modify the mapping relationship between the local precedence and the egress queue	

### 3.4 Base Configuration-QoS- Ports

#### 3.4.1 Base Configuration-QoS- Ports-Port Priority

Quality of Service (QoS) Port-based settings allow you to configure each port on the device for QoS Local Area Network (LAN) settings using different priority levels for network traffic. This allows the router to prioritize and handle traffic differently on each port so you may get the best performance while connecting to a range of devices.

Port	Default Priority	QoS Policy	Schedule Mode	Weights	Setting
GE/1	0	NONE	SP		<a href="#">Modify</a>
GE/2	0	NONE	SP		<a href="#">Modify</a>
GE/3	0	NONE	SP		<a href="#">Modify</a>
GE/4	0	NONE	SP		<a href="#">Modify</a>
GE/5	0	NONE	SP		<a href="#">Modify</a>
GE/6	0	NONE	SP		<a href="#">Modify</a>
GE/7	0	NONE	SP		<a href="#">Modify</a>
GE/8	0	NONE	SP		<a href="#">Modify</a>
GE/9	0	NONE	SP		<a href="#">Modify</a>
GE/10	0	NONE	SP		<a href="#">Modify</a>

### Configuration Steps

1. Select [Base Configuration / QOS / Ports / Port Priority] in the navigation bar to enter the QOS [Port Priority] interface.
2. The QOS related configuration of the port can be viewed on the QOS [Port Priority] interface.
3. To modify the QOS configuration of a port, click [Modify] on the corresponding port display to enter the port setting interface, as shown in Figure 5.4.
4. Select or fill in the configuration items that need to be modified and click [Apply] to confirm. There will be prompts if the configuration item is filled in incorrectly.

Port Priority	
Port	GE/2
Default Priority	0 <0-7>
QOS Policy	NONE
Schedule Mode	SP
Weights	1 .3 .5 .7 .11 .25 .31 .44 <1-127>
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

Item	Description	Notes
<b>Port Default Priority</b>	Port name information The port default with priority NONE: indicates no policy. The port does not have a policy by default.	Range <0-7>
<b>QoS Policy</b>	COS: COS priority policy DSCP: DSCP priority policy OS-DSCP: COS-DSCP priority policy SP: Strict Priority scheduling strategy	
<b>Scheduling Mode</b>	WRR: Weighted Round Robin scheduling strategy WFQ: Weighted Fair Queue scheduling strategy	
<b>Weights</b>	If the selected scheduling mode is WRR or WFQ, you need to configure the weight of each queue, total 8 queues. To set 8 weights, the weight of all queues must be 127.	

### 3.4.2 Base Configuration-QoS- Ports-Rate Limitation

Port-based rate limiting allows you to limit the speed at which network traffic is sent or received by a device that is connected to a port on your switch. Unlike 802.1p Quality of Service (QoS), port-based rate limiting does not prioritize information based on type. Rate limiting simply means that the switch will slow down traffic on a port to keep it from exceeding the limit that you set. If you set the rate limit on a port too low, you might see degraded video stream quality, sluggish response times during online activity, and other problems.

Port	Ingress Rate Limitation	Rate(Kbps)	Egress Rate Limitation	Rate(Kbps)	Setting
GE/1	Off	N/A	Off	N/A	<a href="#">Modify</a>
GE/2	Off	N/A	Off	N/A	<a href="#">Modify</a>
GE/3	Off	N/A	Off	N/A	<a href="#">Modify</a>
GE/4	Off	N/A	Off	N/A	<a href="#">Modify</a>
GE/5	Off	N/A	Off	N/A	<a href="#">Modify</a>
GE/6	Off	N/A	Off	N/A	<a href="#">Modify</a>
GE/7	Off	N/A	Off	N/A	<a href="#">Modify</a>
GE/8	Off	N/A	Off	N/A	<a href="#">Modify</a>
GE/9	Off	N/A	Off	N/A	<a href="#">Modify</a>
GE/10	Off	N/A	Off	N/A	<a href="#">Modify</a>

### Configuration Steps

1. Select [Base Configuration / QOS / Port / Rate Limitation] in the navigation bar to enter the QOS [Rate Limitation] interface.
2. On the QOS [Rate Limitation] interface, you can view the related configuration of the port's speed limit.
3. To modify the port's speed limit configuration, click [Modify] in the port display

column to enter the Rate Limitation setting interface.

4. Select or fill in the configuration items that need to be modified and click [Apply] to confirm. There will be prompts if the configuration item is filled in incorrectly.

Rate Limitation	
Port	GE/5
Ingress Rate Limitation	<input checked="" type="radio"/> On <input type="radio"/> Off <16-1000000> kbps
Egress Rate Limitation	<input checked="" type="radio"/> On <input type="radio"/> Off <16-1000000> kbps
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

	Item Description	Notes
<b>Port</b>	Port name information	
<b>Ingress Rate Limitation</b>	Set the port's entry speed limit: <b>On:</b> Enables the port to limit the rate of ingress. The rate limit ranges from <16-1000000> <b>OFF:</b> Close the port's ingress rate limit	
<b>Egress Rate Limitation</b>	Set the port's output speed limit: <b>On:</b> Enables the port to limit the rate of egress. The rate limit ranges from <16-1000000> <b>OFF:</b> Close the port's egress rate limit	

### 3.5 Base Configuration-FDB Table

#### 3.5.1 Base Configuration-FDB Table- Configuration – Aging Setting

## Configuration Steps

1. Select [Base Configuration / FDB Table / Configuration / Aging Time] to enter the [Aging Time] interface.
2. The aging time related configuration of the FDB Table can be viewed in the [Aging Time] interface.
3. If you need to modify the aging time configuration of the FDB Table, you can modify the corresponding configuration in the aging time configuration box and click [Apply].

Item	Description	Notes
<b>Aging Time</b>	<p>The FDB Table aging time can be configured via the radio button.</p> <p><b>Enabled:</b> The aging time is on. Range 1-86400 seconds, default value 300 seconds.</p> <p><b>Disabled:</b> The FDB Table never aging, but the system resetting could clear the dynamic forwarding entries.</p> <p>Note: Default with Enable, 300 seconds.</p>	

## 3.5.2 Base Configuration-FDB Table- Configuration - Static Mac Entry

## Configuration Steps

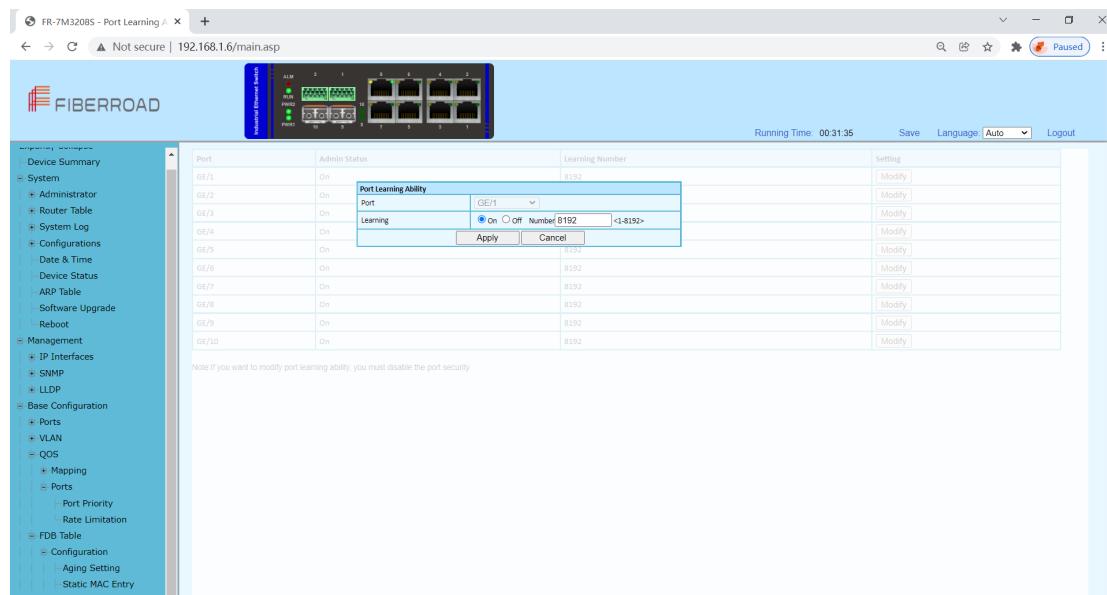

1. Select [Base Configuration / FDB Table / Configuration / Static MAC Entry] to enter the [Static MAC Entry] configuration interface.
2. On FDB Table [Static MAC Entry] interface, you can view the static MAC related configuration information of FDB Table,
3. If add a new static MAC address, click [Add] to enter the Static MAC configuration interface. Fill in the corresponding configuration items and click [Apply] to complete the addition. There will be prompts if the configuration item is filled in incorrectly.
4. If modify the static MAC address, select the corresponding static MAC address and click [Modify] to enter [Static MAC Entry] interface. To modify the corresponding

configuration item, click [Apply] to complete the modification. There will be prompts if the configuration item is filled in incorrectly.

5. If delete a static MAC, select the corresponding static MAC and click [Delete] to delete the static MAC.

Item	Description	Notes
<b>MAC Address</b>	A valid unicast MAC address, format XXXXXX - XXXXXX	
<b>VLAN</b>	A valid VLAN ID, rang 1-4094	
<b>Port</b>	Select a specified port	

### 3.5.3 Base Configuration-FDB Table- Configuration – Port Learning Ability

#### Configuration Steps

1. Select [Base Configuration / FDB Table / Configuration / Port Learning Ability] to enter the [Port Learning Ability] interface.
2. On the FDB Table [Port Learning Ability] interface, you can view the Port Learning Ability related configuration information of FDB Table.
3. To modify the Port Learning Ability configuration, click [Modify] in the corresponding port column to enter the port configuration interface.
4. Select or fill in the configuration items that need to be modified and click [Apply]. There will be prompts if the configuration item is filled in incorrectly.

Item	Description	Notes
<b>Port</b>	Port name, selected modified port	
<b>Learning</b>	Functional configuration of port learning, configured via radio buttons. ON: The Port Learning Ability is on. IS3000 / IS2000 series range is 1-8192; OFF: Closes the Port Learning Ability.	

Note: The default is Enable with value 8192.

Remarks: The number of address learning is shared by all ports

### 3.5.4 Base Configuration-FDB Table- FDB Table

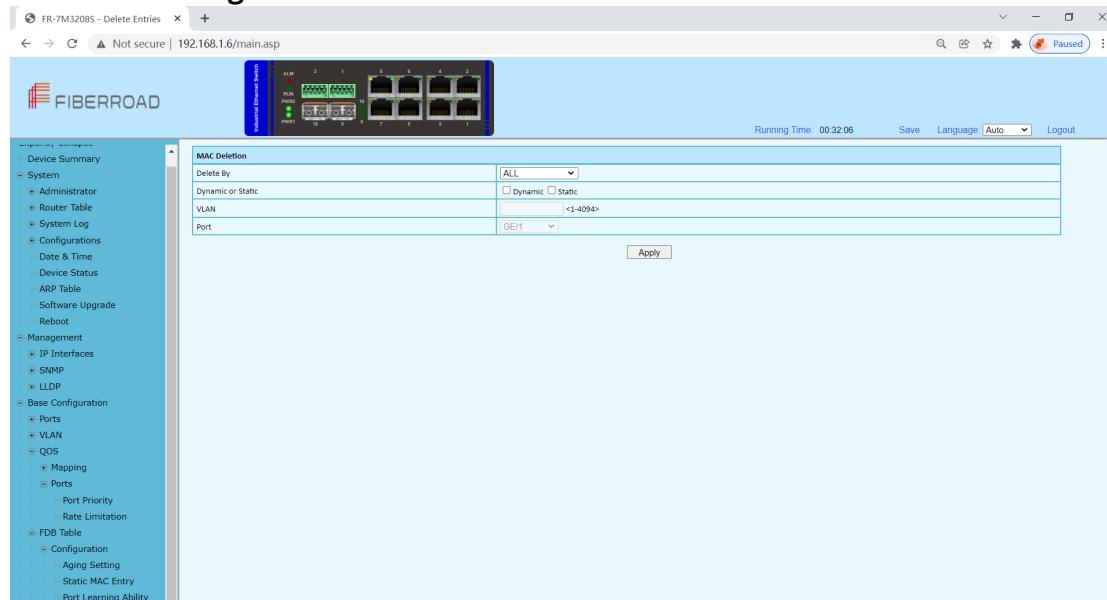

The FDB (forwarding database) table is used by a Layer 2 device (switch/bridge) to store the MAC addresses that have been learned and which ports that MAC address was learned on. The MAC addresses are learned through transparent bridging on switches and dedicated bridges.

	Index	MAC Address	VLAN	Port	Type
<input type="checkbox"/>	1	5005F3-8A52E9	1	GE/8	dynamic

### Configuration Steps

1. Select [Base Configuration / FDB Table / FDB Table] to enter [FDB Table] interface.
2. On the FDB Table interface, you can view the FDB Table information.
3. If delete a forwarding entry, select the corresponding forwarding entry or select it all and click [Delete] to delete the entry.

### 3.5.5 Base Configuration-FDB Table- Delete Entries

#### Configuration Steps

1. Select [Base Configuration / FDB Table / Delete] to enter the [Delete] interface.
2. If delete related entries in the FDB Table in batches, select the corresponding remove condition in the MAC address deletion column, and then click [Apply].

Item	Description	Notes
<b>Delete By</b>	All: Deletes all FDB Table entries. VLAN: Specifies the VLAN ID to delete FDB Table entries. Port: Specify the port number to delete the FDB Table entries.	
<b>Dynamic or static</b>	Dynamic: Delete the dynamic FDB Table entries that have been learned. Static: Delete manually added static FDB Table entries.	
<b>VLAN</b>	Delete the forwarding entry of the specified VLAN. The range is 1-4094.	
<b>Port</b>	Delete the forwarding entry of the specified port.	

### 3.5.6 Base Configuration-FDB Table- Port Mirror

Port mirroring is used on a network switch to send a copy of network packets seen on one switch port (or an entire VLAN) to a network monitoring connection on another switch port. This is commonly used for network appliances that require monitoring of network traffic such as an intrusion detection system, passive probe or real user monitoring (RUM) technology that is used to support application performance management (APM).

### Configuration Steps

1. Select [Base Configuration / Port Mirror] in the navigation bar to enter the [Port Mirror] configuration interface
2. Modify the port mirroring configuration information. Pull down and select to disable or enable mirroring, select the mirroring destination port, check the ingress port and egress port, the ingress or egress cannot contain the destination port, and click [apply] to submit the modification

Item	Description	Notes
<b>Admin Status</b>	Select whether to enable port mirroring	
<b>Monitor Port</b>	Select the destination port for port mirroring via drop-down box	
<b>Source Ingress Ports</b>	Select the source port list in the ingress direction. It can be selected with the check button. (The source port list cannot contain the destination port)	
<b>Source Egress Ports</b>	Select the source port list in the egress direction. It can be selected with the check button. (The source port list cannot contain the destination port)	

### 3.5.7 Base Configuration-FDB Table- Port Isolate

Port isolation allows a network administrator to prevent traffic from being sent between specific ports. This can be configured in addition to an existing VLAN configuration, so even client traffic within the same VLAN will be restricted.

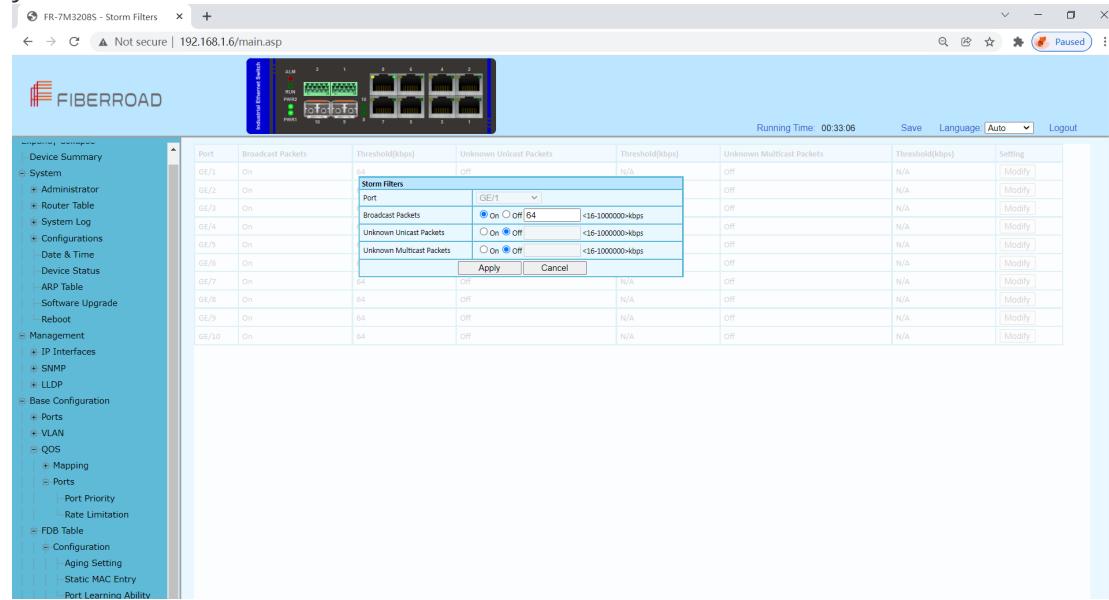

### Configuration Steps

1. Select [Base Configuration / Port Isolate] in the navigation bar to enter the [Port Isolate] configuration interface
2. Modify the port isolate configuration information. Pull down and select to Add or Modify, enter Isolate ID, select a Isolate Ports, and click [apply] to submit the modification.

### 3.5.8 Base Configuration-FDB Table- Storm Filters

Broadcast filtering helps to prevent a broadcast storm, which is a massive transmission of broadcast packets being sent by a single port to every port on a local area network (LAN). Forwarded message responses can overload network resources, slow regular network traffic, or cause the network to time out. Broadcast filtering lets you limit the number of broadcast packets that each port sends. When you turn on broadcast filtering, you have the option to set the storm control rate on each port of your switch.

### Configuration Steps

1. Select [Base Configuration / Storm Filters] in the navigation bar to enter [Storm Filters] configuration interface.
2. The Storm Filtering interface displays broadcast storm filtering configuration information for each port.
3. To modify the port storm filtering configuration information, click the [Modify] to enter the [Storm Filters] modification interface, as shown in Figure 13.2. Enter valid configuration parameters and click [Apply] to submit the changes. Click [Cancel] to cancel the modification

Item	Description	Notes
<b>Port</b>	Modify the configured port <b>ON</b> - If you choose to enable, enter the corresponding rate suppression value, <16-1000000>, and enter 16, unit is kbps <b>OFF</b>	
<b>Broadcast Packets</b>	<b>On</b> - If you choose to enable, enter the corresponding rate suppression value, <16-1000000>, enter 16, unit is kbps <b>OFF</b>	
<b>Unknown Unicast Packets</b>	<b>On</b> - If you choose to enable, enter the corresponding rate suppression value, <16-1000000>, enter 16, unit is kbps <b>OFF</b>	
<b>Unknown Multicast Packets</b>	<b>On</b> - If you choose to enable, enter the corresponding rate suppression value, <16-1000000>, enter 16, unit is kbps <b>OFF</b>	

## Chapter 4 Advanced Configurations

This chapter describes the advance configuration in detail, including but not limit to the following:

- ❖ ACL
- ❖ DHCP snooping
- ❖ Multicast
- ❖ GMRP
- ❖ GVRP
- ❖ EPRS

## 4. Advanced Configuration

### 4.1 Advanced Configuration – Ports – Ports Security

Port security is a layer-2 traffic control feature on Fiberroad Industrial switches. It enables an administrator configure individual switch ports to allow only a specified number of source MAC addresses ingressing the port.

Port	Mode	Action	State	MAC 1	MAC 2	MAC 3	Clear
GE/1	Disabled	Trap	Non-Execution	000000-000000	000000-000000	000000-000000	Clear
GE/2	Disabled	Trap	Non-Execution	000000-000000	000000-000000	000000-000000	Clear
GE/3	Disabled	Trap	Non-Execution	000000-000000	000000-000000	000000-000000	Clear
GE/4	Disabled	Trap	Non-Execution	000000-000000	000000-000000	000000-000000	Clear
GE/5	Disabled	Trap	Non-Execution	000000-000000	000000-000000	000000-000000	Clear
GE/6	Disabled	Trap	Non-Execution	000000-000000	000000-000000	000000-000000	Clear
GE/7	Disabled	Trap	Non-Execution	000000-000000	000000-000000	000000-000000	Clear
GE/8	Disabled	Trap	Non-Execution	000000-000000	000000-000000	000000-000000	Clear
GE/9	Disabled	Trap	Non-Execution	000000-000000	000000-000000	000000-000000	Clear
GE/10	Disabled	Trap	Non-Execution	000000-000000	000000-000000	000000-000000	Clear

Note: If you want to modify the mode, you must enable the port learning ability and set the learning number to 8192.

### Configuration Steps

1. Select [Advance] in the navigation bar to enter the [Port Security] configuration interface
2. Modify the Port Security configuration information. Pull down and select to disabled or enabled mode, select the action, enter the number of MAC addresses to be secured on a port, and click [apply] to submit the modification.

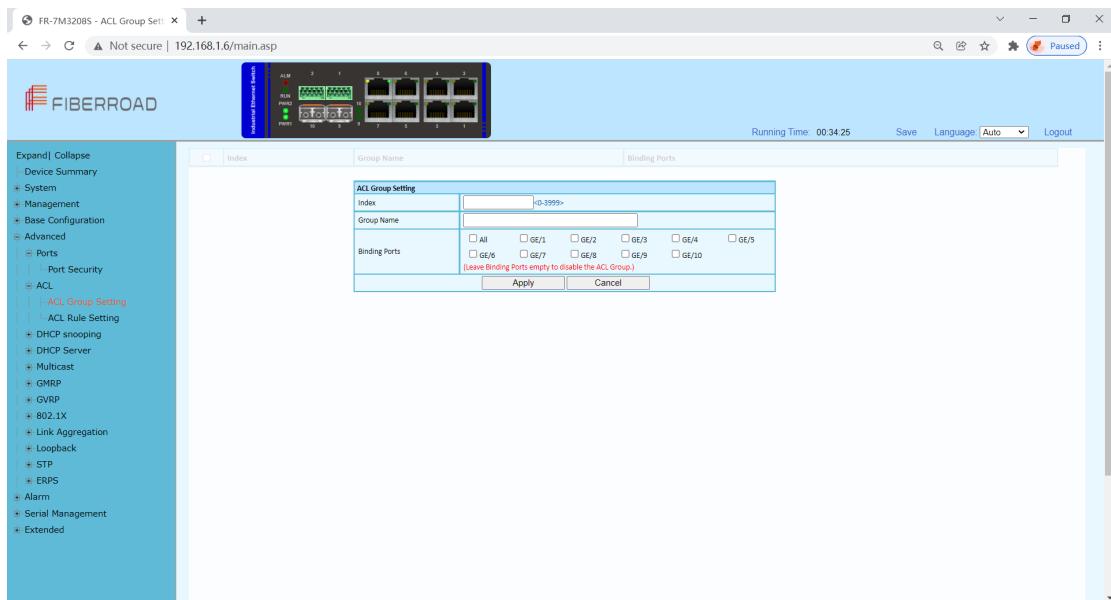

Item	Description	Notes
<b>Mode</b>	Enable port security on the desired ports. If desired, specify the secure MAC address.	
<b>Action</b>	Trap/Shutdown/Trap&Shutdown/Drop/Trap&Drop	
<b>MAC 1/MAC 2/MAC 3</b>	You can add MAC address to the list of secure address	

Remarks: If you want to modify the mode, you must enable the port learning ability and set the learning number to 8192.

## 4.2 Advanced Configuration – ACL

### 4.2.1 Advanced Configuration – ACL – ACL Group Setting

The Groups for ACLs feature lets you classify users, devices, or protocols into groups and apply those groups to access control lists (ACLs) to create access control policies for those groups.

### Configuration Step

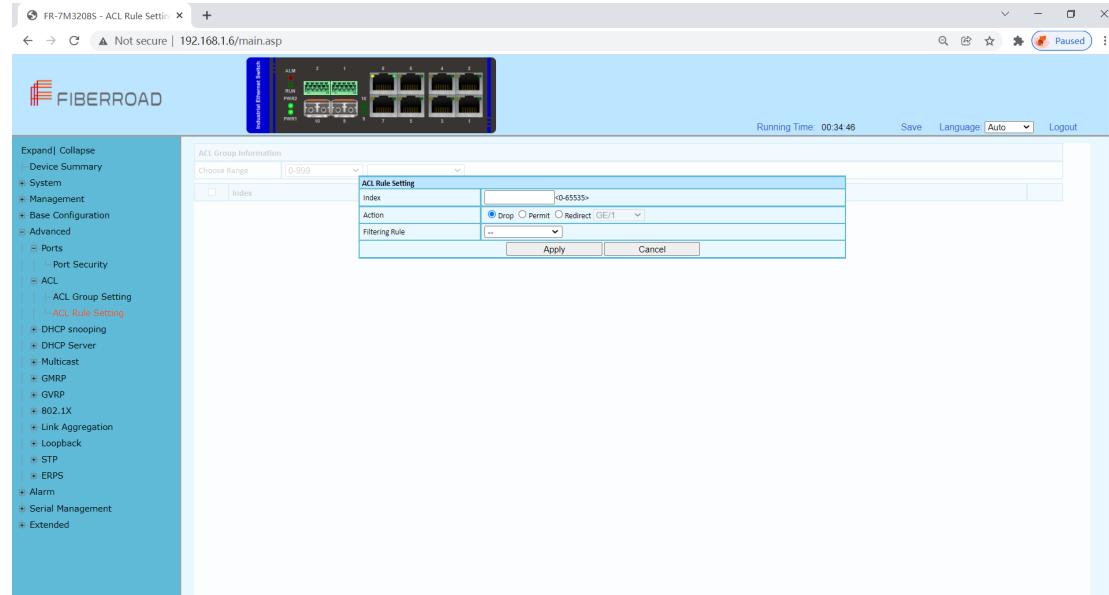

1. Select [Advanced / ACL / ACL Group Setting] in the navigation bar to enter the ACL interface.
2. The ACL information will be added in [ACL Group Setting] interface.
3. Add an ACL Group: click [Add] to enter [ACL Group Setting] interface, An ordinal number (0-3999) is assigned to the group. Set a name for the group, not repeatable. Then select the port and bind to the group. It is not workable if port binding not done. Click [Apply] to complete the configuration.
4. Modify an ACL Group Configuration: select an ACL group and click [Modify] to enter the [ACL Group Setting] interface. Fill in the required configuration items, and click [Apply] to complete the configuration.
5. Delete an ACL Group Configuration: select an ACL group and click [Delete] to delete the configuration.

ACL Group Setting	
Index	<input type="text"/> <0-3999>
Group Name	<input type="text"/>
Binding Ports	<input type="checkbox"/> All <input type="checkbox"/> GE/1 <input type="checkbox"/> GE/2 <input type="checkbox"/> GE/3 <input type="checkbox"/> GE/4 <input type="checkbox"/> GE/5 <input type="checkbox"/> GE/6 <input type="checkbox"/> GE/7 <input type="checkbox"/> GE/8 <input type="checkbox"/> GE/9 <input type="checkbox"/> GE/10 <small>(Leave Binding Ports empty to disable the ACL Group.)</small>
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

Item	Description	Notes
<b>Index</b>	<p>ACL group index, range &lt;0-3999&gt;, divided into 4 matching groups L2, L3 / L4, Source L2 / L3 / L4, Destination L2 / L3 / L4. The matching items supported by each matching group are as follows:</p> <p><b>L2:</b> Source MAC, Destination MAC, Ethernet type, VLAN, IP protocol, range 0-999.</p> <p><b>L3 / L4:</b> VLAN, Source IP, Destination IP, Source IP port, Destination IP port, IP protocol, range 1000-1999.</p> <p><b>Source L2 / L3 / L4:</b> Source MAC, Ethernet type, VLAN, Source IP, Source IP port, IP protocol, range 2000-2999.</p> <p><b>Destination L2 / L3 / L4:</b> Destination MAC, Ethernet type, VLAN, Destination IP, Destination IP port, IP protocol, range 3000-3999.</p>	
<b>Group Name</b>	The Group name must be unique and string format, ASCII code A-Z, a-z, 0-9, _ no more than 32 characters.	
<b>Binding Ports</b>	An ACL is applied to a certain port or some port, then the bound port ACL becomes effective.	

#### 4.2.2 Advanced Configuration – ACL – ACL Rule Setting

ACLs are a collection of permit and deny conditions, called rules, that provide security by blocking unauthorized users and allowing authorized users to access specific resources. ACLs can block any unwarranted attempts to reach network resources.

#### Configuration Step

1. Select [Advanced / ACL / ACL Rule Setting] in the navigation bar to enter the ACL Rule view interface.
2. In Select Range, select the interval of the group in the first drop-down list, and select a specific group within the group interval in second drop-down list. The next two lines show the selected group name and the port that the group binds. The table shows the ACL rules that the group has configured. Click the icon in the filter rule bar to expand and view the specific content of the filter rule, the icon changed to be .

ACL Group Information		
Choose Range	0-999	
	Index	Action
		Filtering Rule

3. Add an ACL Rule: click [Add] to enter the ACL rule setting interface. One of the filtering rules can be selected by selecting different filters via the drop-down list, and then the corresponding filtering items will be automatically generated for users to fill in. You can also remove the filter items by the [Delete] on the right side. Fill in the required configuration items, and click [Apply] to complete the configuration.

ACL Rule Setting	
Index	<0-65535>
Action	<input checked="" type="radio"/> Drop <input type="radio"/> Permit <input type="radio"/> Redirect GE/1
Filtering Rule	--
	<input type="button" value="Apply"/> <input type="button" value="Cancel"/>

4. Modify an ACL Rule: select an ACL and click 'Modify' to enter the [ACL Rule Setting] interface. Fill in the required configuration items, and click 'Apply' to complete the configuration.
5. Delete an ACL Rule: select an ACL and click 'Delete' to delete the configuration.

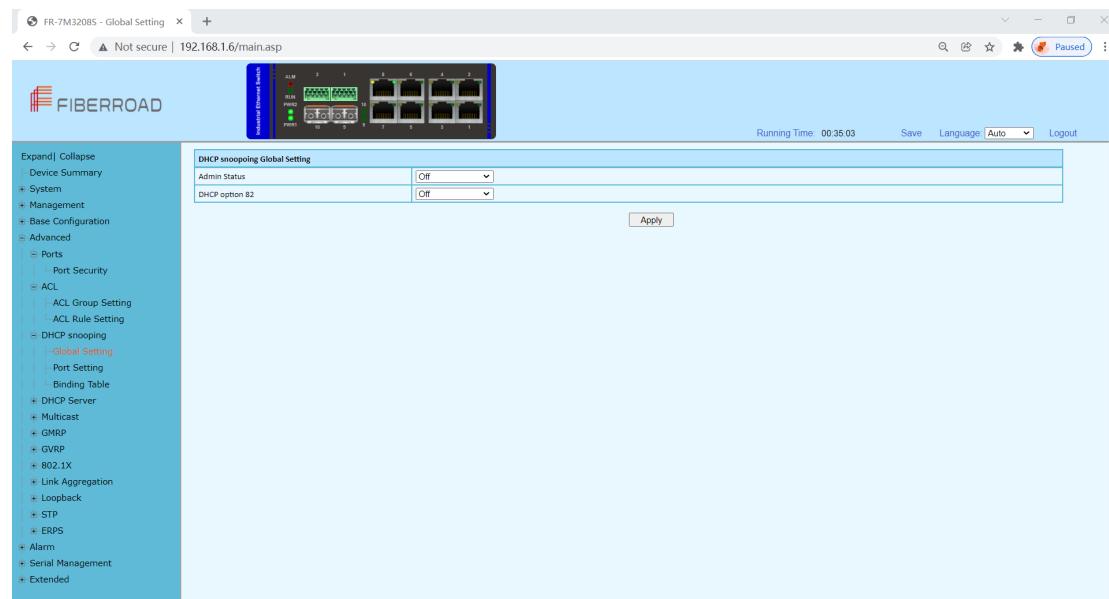

ACL Rule Setting	
Index	<input type="text"/> <0-65535>
Action	<input checked="" type="radio"/> Drop <input type="radio"/> Permit <input type="radio"/> Redirect GE/1
Filtering Rule	--
IP Protocol	<input checked="" type="radio"/> ICMP <input type="radio"/> IGMP <input type="radio"/> TCP <input type="radio"/> UDP
Source MAC	<input checked="" type="radio"/> Any <input type="radio"/> <input type="text"/> XXXXXX-XXXXXX MASK: FFFFFF-FFFFFF <input type="button" value="Delete"/>
Destination MAC	<input checked="" type="radio"/> Any <input type="radio"/> <input type="text"/> XXXXXX-XXXXXX MASK: FFFFFF-FFFFFF <input type="button" value="Delete"/>
VLAN	<input checked="" type="radio"/> Any <input type="radio"/> <input type="text"/> <1-4094> <input type="button" value="Delete"/>
Ethernet Type	<input checked="" type="radio"/> Any <input type="radio"/> <input type="text"/> Hex <input type="button" value="Delete"/>
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

Item	Description	Notes
<b>Index</b>	ACL Rule Index When the message conforms to the filter rule, the action includes: Allow Discarded Redirect to the destination port ACL filtering rules include: Source MAC Destination MAC IP Protocol Ethernet type VLAN The filtering items can be filtered by a range via setting the mask. <b>Note: When the match mask is 1, it is matched. Not matched at 0</b>	
<b>Filtering Rule</b>		
Item	Description	Notes
<b>Sources MAC</b>	Format XXXXXX-XXXXXX, support the mask, default mask ffffff-ffffff	
<b>Destination MAC</b>	Format XXXXXX-XXXXXX, support the mask, default mask ffffff-ffffff	
<b>IP Protocol</b>	Only supports TCP, UDP, ICMP, IGMP currently	
<b>Ethernet Type</b>	Hexadecimal format, support mask, default mask FFFF	
<b>VLAN</b>	<1-4094>	

## 4.3 Advanced Configuration – DHCP snooping

### 4.3.1 Advanced Configuration – DHCP snooping – Global Setting

DHCP snooping is a security feature that acts like a firewall between untrusted hosts and trusted DHCP servers.

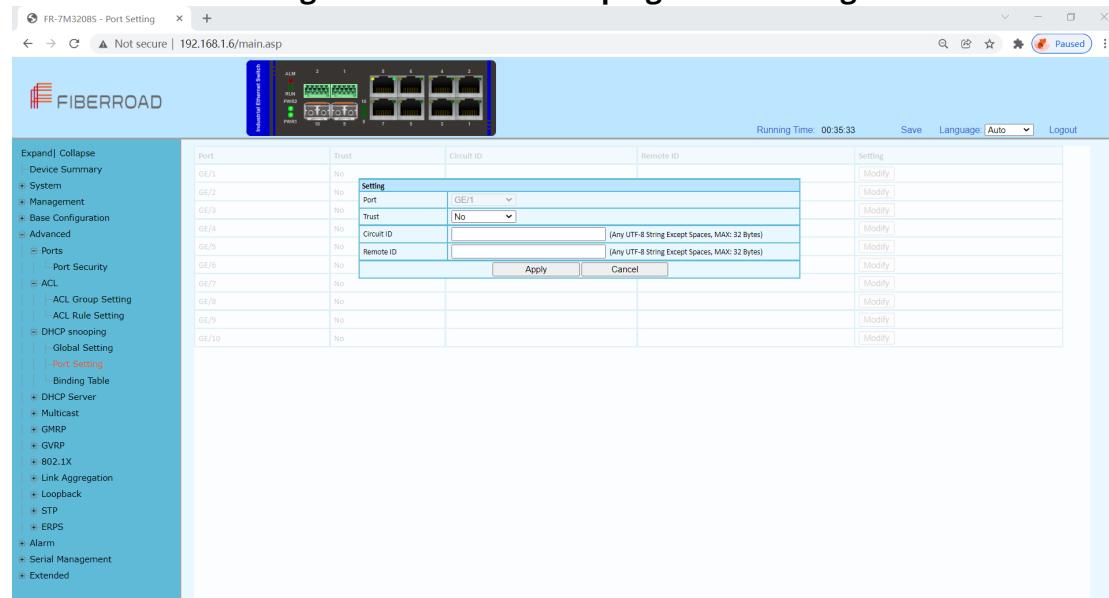

#### Configuration Steps

1. Select [Advanced / DHCP Snooping / Global Setting] in the navigation bar to enter the [Global Setting] interface of DHCP snooping.
2. The global configuration information can be viewed in of DHCP snooping [Global Setting] interface.
3. To modify the global configuration of DHCP snooping in the DHCP snooping global configuration box, click [Apply].

DHCP snooping Global Setting	
Admin Status	Off
DHCP option 82	Off
Apply	

Item	Description	Notes
<b>Admin Status</b>	ON: Enable DHCP Snooping Global OFF: Disable DHCP Snooping Global	Default: OFF
<b>DHCP option 82</b>	ON: Enable DHCP Snooping Global OFF: Disable DHCP Snooping Global	Default: OFF

#### 4.3.2 Advanced Configuration – DHCP snooping – Port Setting

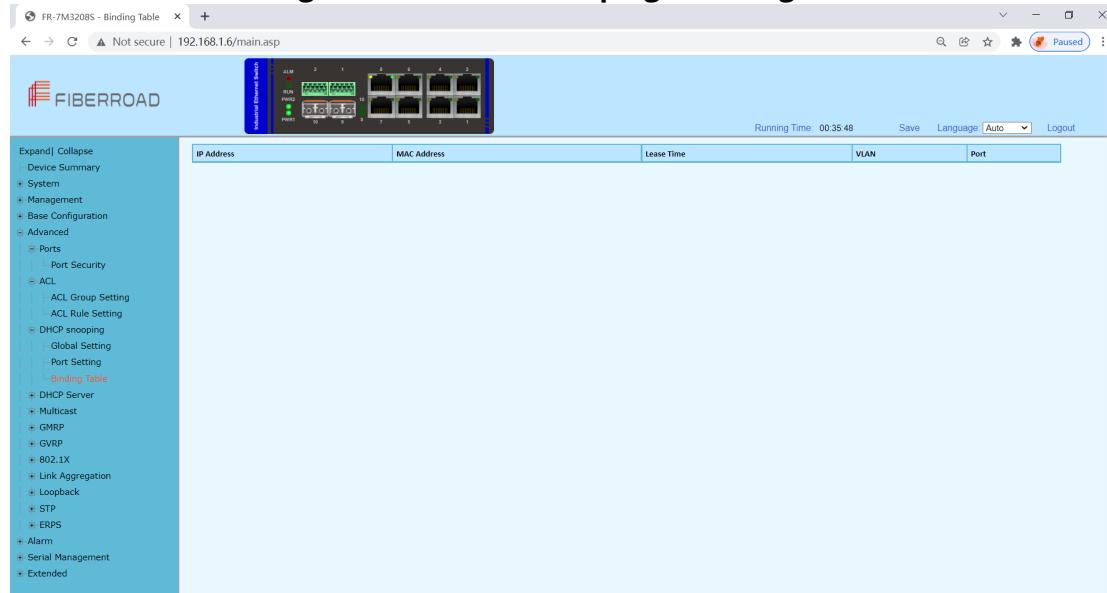

#### Configuration Steps

1. Select [Advanced / DHCP Snooping / Port Setting] in the navigation bar to enter the DHCP snooping [Port Setting] interface.
2. The port configuration can be viewed in the DHCP snooping [Port Setting] interface.
3. To modify the DHCP snooping configuration for a port, click the [modify] to enter the port configuration interface, as shown in figure 17.2.
4. Select or fill in the configuration items that need to be modified, and click [Apply] to make effective. There will be prompts if the configuration items are incorrectly filled.

Item	Description	Notes
<b>Port</b>	The name of information	
<b>Trust</b>	Yes: Set as trust port No: Set as untrust port	
<b>Circuit ID</b>	Default by global agent circuit ID	
<b>Remote ID</b>	Default by global agent remote ID	

### 4.3.3 Advanced Configuration – DHCP snooping – Binding Table

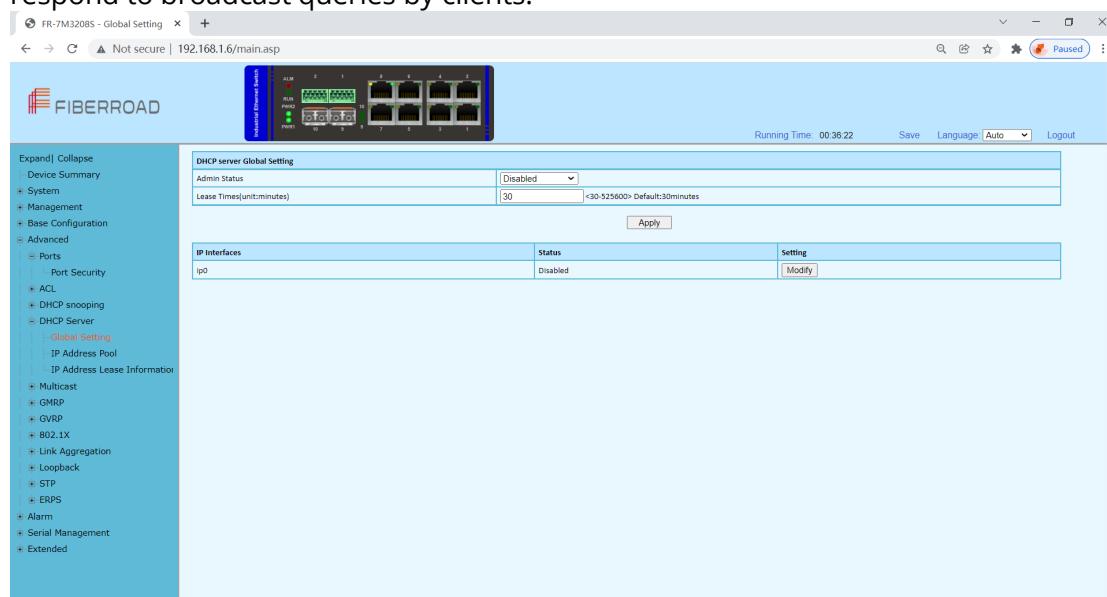

#### Configuration Steps

1. Select [Advanced / DHCP Snooping / Binding Table] in the navigation bar to enter the DHCP snooping [Binding Table] interface.
2. All bind list information can be viewed in the DHCP snooping [Binding Table] interface.
3. Click [Refresh] to update all DHCP snooping bind list information.

## 4.4 Advanced Configuration – DHCP Server

### 4.4.1 Advanced Configuration – DHCP Server – Global Setting

A DHCP Server is a network server that automatically provides and assigns IP address, default gateways and other network parameters to client devices. It relies on the standard protocol known as Dynamic Host configuration protocol or DHCP to respond to broadcast queries by clients.

## Configuration Steps

1. Select [Advanced / DHCP Server / Global] in the navigation bar to enter the DHCP Server[Global Setting] interface.

2. The DHCP server global setting admin status can be enabled/disable , and enter the lease times.

**Remarks:** 1. This DHCP-assigned IP address is not permanent and expires in about 24 hours.

3, Click [Modify] to modify IP interface individually.

Setting	
IP Interfaces	ip0
Status	Disabled
Apply Cancel	

Item	Description	Notes
<b>Admin Status</b>	Enabled / Disabled DHCP server global setting	Default: Disabled
<b>Lease time</b>	<30-525600>	Default:30minutes
<b>Status</b>	Enabled / Disabled IP interface individually	Default:30minutes

### 4.4.2 Advanced Configuration – DHCP Server – IP Address Pool

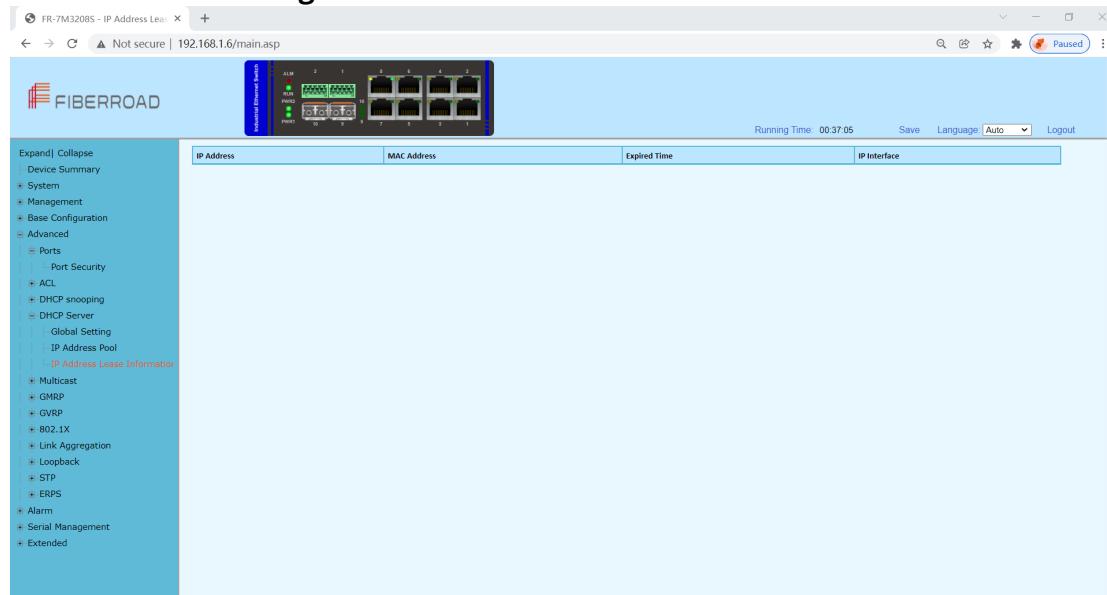

Each DHCP address pool has a group of assignable IP addresses and network configuration parameters. The DHCP server selects IP addresses and other parameters from the address pool and assigns them to the DHCP clients.

### Configuration Steps

1. Select [Advanced / DHCP Server / IP Address Pool] in the navigation bar to enter the DHCP Server [IP Address Pool] interface.
2. All IP Address Pool information can be viewed in the DHCP Server [IP Address Pool] interface.
3. Click [Add] to add IP address pool individually. Click [Apply] to complete the configuration.

Item	Description	Notes
<b>Pool Name</b>	The name information of IP address pool	Default: None
<b>IP Interface</b>	Select a needed IP interface	Default: None
<b>Start IP Address</b>	Start IP Address in the IP address pool	Default: None
<b>End IP Address</b>	End IP Address in the IP address pool	Default: None
<b>Subnet Mask</b>	Subnet Mask of IP address	Default: None
<b>Lease Times</b>	No Yes: <30-525600> minutes	Default: None
<b>Default Gateway</b>	No Yes IPv4(A.B.C.D)	Default: None
<b>DNS Server</b>	No Yes IPv4(A.B.C.D)	Default: None
<b>Secondary DNS Server</b>	No Yes IPv4(A.B.C.D)	Default: None
<b>Static IP Address</b>	Add Static IP Address as needed	Default: None

### 4.4.3 Advanced Configuration – DHCP Server – IP Address Lease Information

### Configuration Steps

1. Select [Advanced / DHCP Server / IP Address Lease Information] in the navigation bar to enter the DHCP Server [IP Address Lease Information] interface.
2. All IP Address Lease Information can be viewed in the DHCP Server [IP Address Lease Information] interface.
3. Click [Refresh] to refresh the list of the information.

## 4.5 Advanced Configuration - Multicast

### 4.5.1 Advanced Configuration - Multicast - Manual Address Setting

Multicast is the delivery of information to a group of destinations simultaneously, using the most efficient strategy to deliver messages over each link of the network only once, and create copies only when the links to the destinations split.

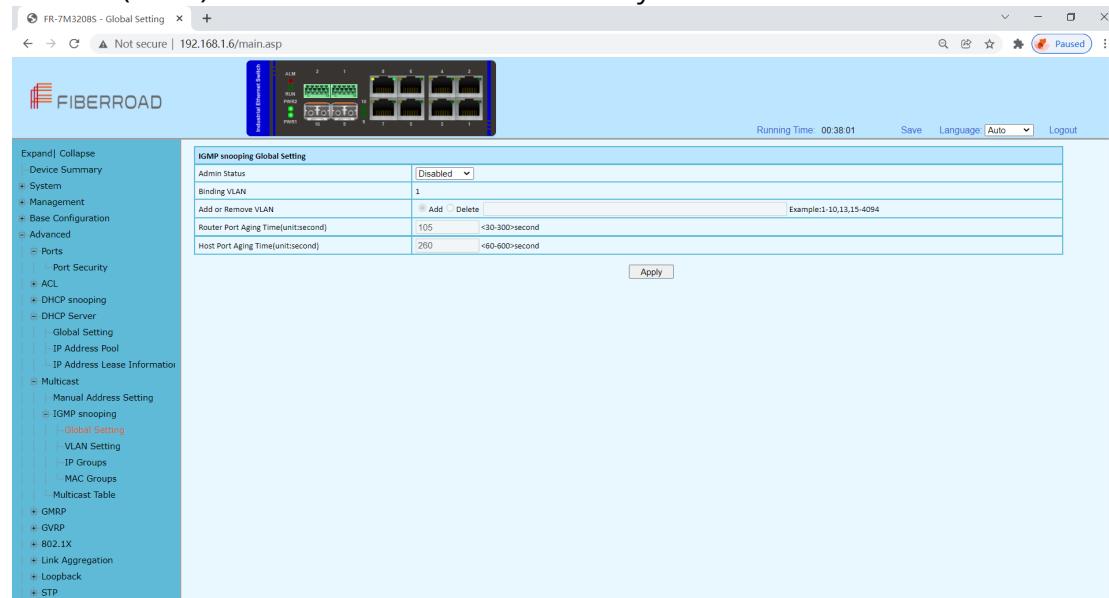

### Configuration Steps

1. Select [Advanced / Multicast /Manual Address Setting] in the navigation bar to enter the Multicast [Manual Address Setting] interface.
2. All manual address can be viewed in the Multicast [Manual Address Setting] interface.
3. Click [Add] to manual add MAC address and VLAN for corresponding ports.
4. Click [Apply] to complete the configurations

#### 4.5.2 Advanced Configuration – Multicast – IGMP snooping Global Setting

IGMP snooping is the process of listening to Internet Group Management Protocol(IGMP) network traffic to control delivery of IP multicasts.

#### Configuration Steps

1. Select [Advanced / Multicast / IGMP snooping / Global Setting] in the navigation bar to enter the [Global Setting].
2. You can view the global configuration of IGMP snooping on the IGMP snooping global interface.
3. If you need to modify the global configuration of IGMP snooping, you can modify the corresponding configuration in the configuration box, and then click [Apply].

Item	Description	Notes
<b>Admin Status</b>	Enabled: Enable the IGMP snooping function Disabled: Disable IGMP snooping function	Default: Disabled
<b>Binding VLAN</b>	List of VLANs to be bound	
<b>Add or Remove VLAN</b>	Select the operation for the VLAN and enter the list of VLANs to add or remove:  <b>Add:</b> Add a VLAN. The format is as follows: 1-10,13,15-4094; <b>Delete:</b> Delete the VLAN. The format is as follows: 1-10,13,15-4094.	
<b>Route Port Aging Time</b>	Valid aging time of routed ports, range 30-300. The default is 105. The unit is seconds.	
<b>Host Port Aging Time</b>	Effective host port aging time, range 60-600. The default is 260.	Unit: Second

#### 4.5.3 Advanced Configuration – Multicast – IGMP snooping VLAN setting

To run the IGMP Snooping querier on a VLAN, you have to enable it globally and on the VLAN. To enable IGMP snooping on a specific VLAN, use the IP IGMP snooping VLAN enable command in switch configuration mode.

#### Configuration Steps

1. Select [Advanced / IGMP Snooping / VLAN Settings] to enter the VLAN Settings

VLAN	Router Ports	Fast Leave	Querier	Querier Interval(s)	Querier Source IP Address	Setting
1	Dynamic	Disabled	Disabled			<input type="button" value="Modify"/>

Prev Next 1 /1 Go Home Tail Bulk Configuration

2. The IGMP snooping [VLAN Settings] interface displays all the VLAN configuration information of IGMP Snooping.

3. Modify individual bound VLAN configuration information. After entering the [VLAN Settings] interface, click the [Modify] to enter the modification interface, as shown in Figure 12.2. Enter valid configuration parameters and click [Apply] to submit the modification. Click [Cancel] to abandon the modification.

VLAN Setting	
VLAN	1 <1-4094>
Router Port Mode	Dynamic
Fast Leave	Disabled
Querier	Disabled
Querier Interval	60 s <30-120>s
Querier Source IP Address	0.0.0.0 A.B.C.D
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

4. Bulk VLAN configuration information in batches. After entering the [VLAN Setting], click the [Bulk Configuration] at the bottom of the page to enter the [VLAN Bulk Configuration], as shown in Figure 12.3. Enter valid configuration parameters and click [Apply] to submit the modification. Click [Cancel] to abandon the modification.

VLAN Bulk Configuration	
VLAN List	Example:1-10,13,15-4094
Router Port Mode	<input checked="" type="checkbox"/> Dynamic
Fast Leave	<input checked="" type="checkbox"/> Disabled
Querier	<input checked="" type="checkbox"/> Disabled
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

Item	Description	Notes
<b>VLAN</b>	VLAN being configured	
	Select the mode of the routed port in this VLAN.	
	Use the drop-down box to modify it.	
<b>Router Port Mode</b>	<b>Dynamic</b>	
	<b>Static</b> - If you choose the static routing port mode, you still need to select specific routing ports.	
	It can be selected with the check button.	
<b>Fast Leave Mode</b>	Select whether to enable the quick leave mode under this VLAN. Use the drop-down box to modify it.	
	<b>Disabled</b>	
	<b>Enabled</b>	
	Select whether to enable the querier function in this VLAN. Use the drop-down box to modify it.	
<b>Querier</b>	<b>Disabled</b>	
	<b>Enable</b> - If the querier is enabled, you need to set the corresponding querier interval and query source IP address.	
<b>Query Interval</b>	The query interval of the querier is 30-120 seconds.	
<b>Queryer Source IP Address</b>	Set the source IP address of the query message sent by the querier. The valid unicast address is "192.168.1.11". "0.0.0.0" is also available	

#### 4.5.4 Advanced Configuration – Multicast – IGMP snooping IP Groups

#### Configuration Steps

Select [Advanced / IGMP snooping / IP Groups] in the navigation bar to enter the IP Group interface.

The IGMP snooping [IP group] interface displays the IP group information maintained by IGMP Snooping and can be refreshed by clicking the [Refresh].

#### 4.5.5 Advanced Configuration – Multicast – IGMP snooping MAC Groups

#### Configuration Steps

1. Select [Advanced / IGMP Snooping / MAC Groups] in the navigation bar to enter the MAC Group interface
2. The IGMP snooping [MAC Group] interface displays the MAC group information maintained by IGMP Snooping. Click the Refresh button to refresh.

#### 4.5.6 Advanced Configuration - Multicast - IGMP snooping Multicast Table

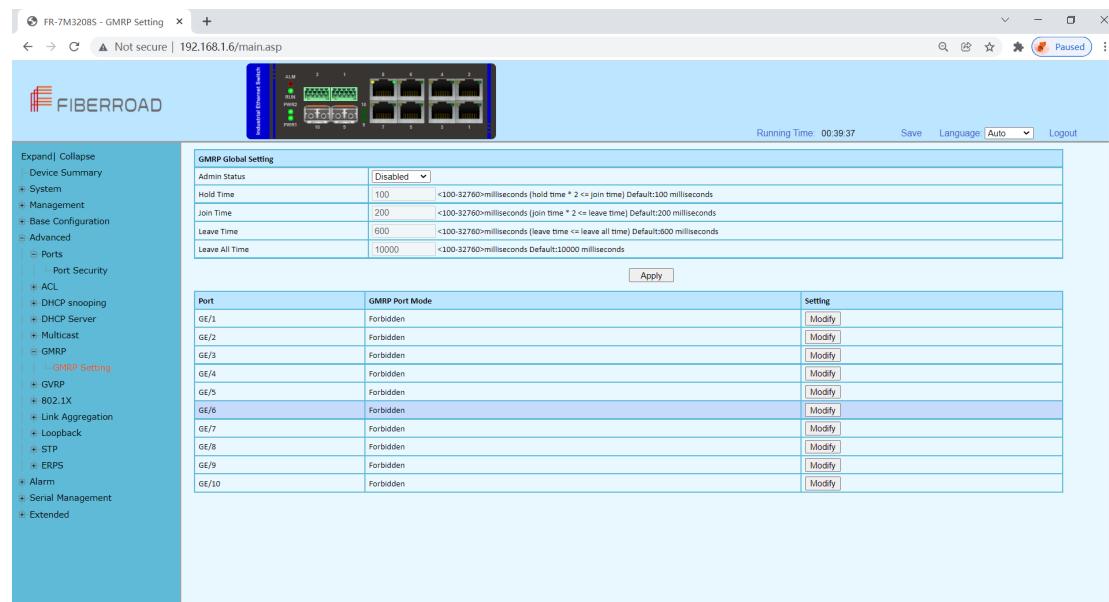

#### Configuration Steps

1. Select [Advanced / IGMP Snooping / Multicast Table] in the navigation bar to enter the Multicast Table interface
2. The IGMP snooping [Multicast Table] interface displays the Multicast Table information maintained by IGMP Snooping. Click the Refresh button to refresh.

## 4.6 Advanced Configuration - GMRP

### 4.6.1 Advanced Configuration - GMRP- GMRP Setting

GARP Multicast Registration Protocol (GMRP) is a Generic Attribute Registration Protocol (GARP) application that provides a constrained multicast flooding facility similar to IGMP snooping. GMRP and GARP are industry-standard protocols defined by the IEEE 802.1

### Configuration steps

1. Select [GMRP / GMRP Setting] in the navigation bar to enter the GMRP configuration interface.
2. You can view the global configuration of GMRP in the [GMRP Global Settings] interface
3. If you need to modify the global configuration of GMRP, modify the corresponding configuration in the GMRP global configuration box, and then click <Apply>.

Item	Description	Notes
<b>Admin Status</b>	GMRP global enable switch. <b>Enabled:</b> Enable GMRP function; <b>Disabled:</b> Disable the GMRP function.	Default: Disabled
<b>Hold Time</b>	Hold timer period, the range is 100-32760 (ms), the default value is 100ms;	$\leq 2$
<b>Join Time</b>	Join timer period, the range is 100-32760 (ms), the default value is 200ms;	$\leq 2$
<b>Leave Time</b>	Leave timer period, the range is 100-32760 (ms), the default value is 600ms	Leave Time $\leq$ Leave All Time
<b>Leave All Time</b>	Leave all timer period, the range is 100-32760 (ms), the default value is 10000ms;	Leave Time $\leq$ Leave All Time

### GMRP Port Mode Configurations,

1.If you need to modify the Port Mode of GMRP, Click [modify] to select GMRP Mode as Normal , Fixed, Forbidden

GMRP Port Mode	
Port	GE/1
GMRP Mode	<input type="radio"/> Normal <input type="radio"/> Fixed <input checked="" type="radio"/> Forbidden
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

Item	Description	Notes
<b>Port</b>	Port name of information	
<b>GMRP Mode</b>	Normal, Fixed, Forbidden	Default: Forbidden

## 4.7 Advanced Configuration - GVRP

### 4.7.1 Advanced Configuration - GVRP - GVRP Setting

Same as GMRP, GVRP (GARP VLAN Registration Protocol) is a VLAN registration protocol based on GARP (Generic Attribute Registration Protocol), which is used to register and deregister VLAN attributes

### Configuration Steps

- 1.Select [GVRP/GVRP configuration] from the navigation bar to enter the GVRP configuration interface.
- 2.The global configuration of GVRP can be viewed in the [GVRP global Settings] interface,
- 3.To modify the GVRP global configuration, modify the corresponding configuration in the GVRP global configuration box, and then click < apply >.

ITEM	DESCRIPTION	NOTES
<b>ADMIN STATUS</b>	GVRP global enable switch. Enabled: Enable GVRP function; Disabled: Disable the GVRP function.	DEFAULT: DISABLED
<b>HOLD TIME</b>	Hold timer period, the range is 100-32760 (ms), the default value is 100ms;	≤2
<b>JOIN TIME</b>	Join timer period, the range is 100-32760 (ms), the default value is 200ms;	≤2
<b>LEAVE TIME</b>	Leave timer period, the range is 100-32760 (ms), the default value is 600ms	LEAVE TIME ≤ LEAVE ALL TIME
<b>LEAVE ALL TIME</b>	Leave all timer period, the range is 100-32760 (ms), (ms), the default value is 10000ms;	LEAVE TIME ≤ LEAVE ALL TIME

**GVRP Port Mode Configurations,**

1.If you need to modify the Port Mode of GVRP, Click [modify] to select GVRP Mode as Normal , Fixed, Forbidden

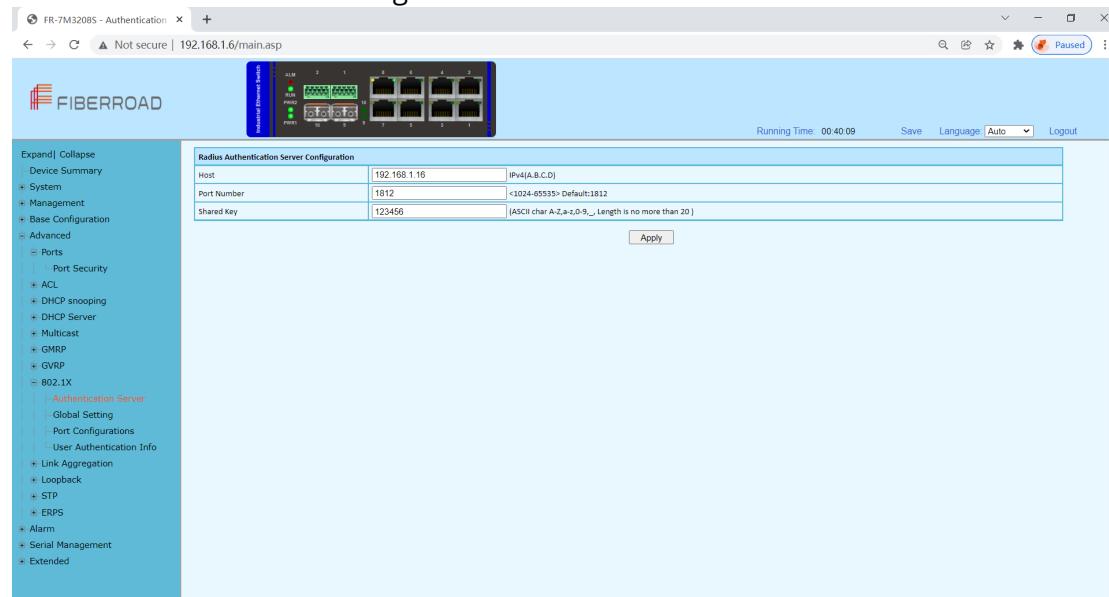

GVRP Port Mode	
Port	GE/1
GVRP Mode	<input type="radio"/> Normal <input type="radio"/> Fixed <input checked="" type="radio"/> Forbidden
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

Item	Description	Notes
<b>Port</b>	Port name of information	
<b>GVRP Mode</b>	Normal, Fixed, Forbidden	Default: Forbidden

## 4.8 Advanced Configuration - 802.1X

### 4.8.1 Advanced Configuration - 802.1X - Authentication Server

IEEE 802.1X is an IEEE Standard for port-based Network Access Control (PNAC). It is part of the IEEE 802.1 group of networking protocols. It provides an authentication mechanism to devices wishing to attach to a LAN or WLAN.

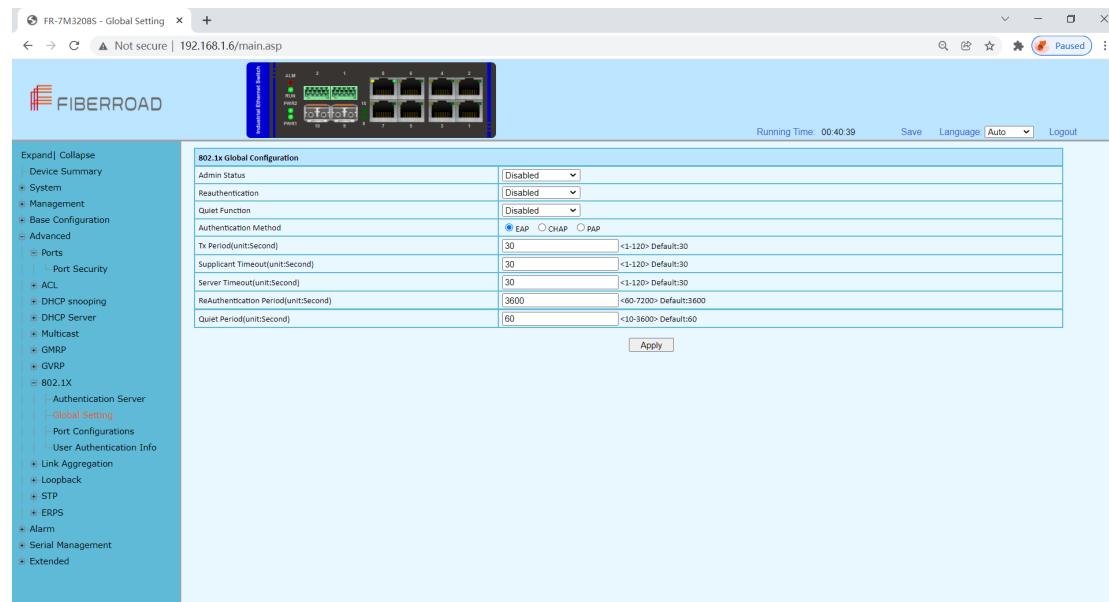

### Configuration Steps

1. Select [Advanced / 802.1X / Authentication Server] in the navigation bar to enter Radius Authentication Server Configuration.
2. Check the configuration information in the interface
3. To apply the Authentication Server configuration, click [Apply] in the Authentication Server configuration box.

Item	Description	Notes
<b>Host</b>	The IP of Radius Authenticated Server, IPv4 and Dotted decimal format	
<b>Port Number</b>	The port of Radius Authenticated Server, range<1-65535>, default with 1812	Default:1812
<b>Shared Key</b>	Must be consistent with Radius server, otherwise it can not pass authentication. String format, only contain letters, numbers, underscores, and the length cannot be more than 20 byte	

#### 4.8.2 Advanced Configuration – 802.1X – Global Setting

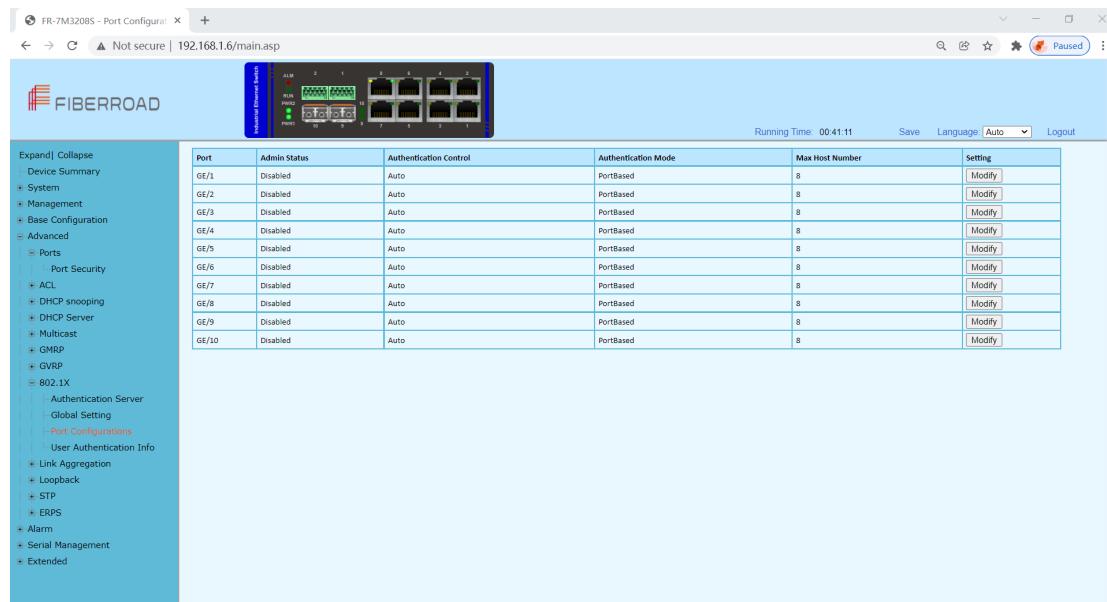

#### Configuration Steps

1. Select [Advanced / 802.1X / Global Setting] in the navigation bar to enter the [Global Setting] interface.
2. The global configuration information can be viewed in the interface.
3. To modify the global configuration in the Global Configuration box, click [Apply].

ITEM	DESCRIPTION	NOTES
<b>ADMIN STATUS</b>	Disabled: Disabled Global 802.1X Enabled: Enabled Global 802.1X	Default: Disabled
<b>REAUTHENTICATION</b>	Disabled: Disabled re-authentication Enabled: Enabled re-authentication	Default: Disabled
<b>QUIET FUNCTION</b>	Disabled: Disabled quiet function Enabled: Enabled quiet function	Default: Disabled
<b>AUTHENTICATION METHOD</b>	EAP/PAP/CHAP	
<b>TX PERIOD (UNIT: SECOND)</b>	1-120	Default: 30
<b>SUPPLICANT TIMEOUT (UNIT: SECOND)</b>	1-120	Default: 30
<b>SERVER TIMEOUT (UNIT:SECOND)</b>	1-120	Default: 30
<b>REAUTHENTICATION PERIOD (UNIT:SECOND)</b>	60-7200	Default: 3600
<b>QUIET PERIOD (UNIT:SECOND)</b>	10-3600	Default: 60

#### 4.8.3 Advanced Configuration – 802.1X – Port Configurations

#### Configuration Steps

1. Select [Advanced / 802.1X / Port Configurations] in the navigation bar to enter the [Port Configurations] interface.
2. On the [Port Configurations] interface, you can view the configuration information of each port, the current 802.1X configuration information of each port is displayed.
3. To modify the configuration of a port, simply click the [Edit] in corresponding entry to enter modification interface, as shown in Figure 10.4. Modify the corresponding configuration item, click the [Apply] to complete the modification, and click the [Cancel] to cancel the modification.

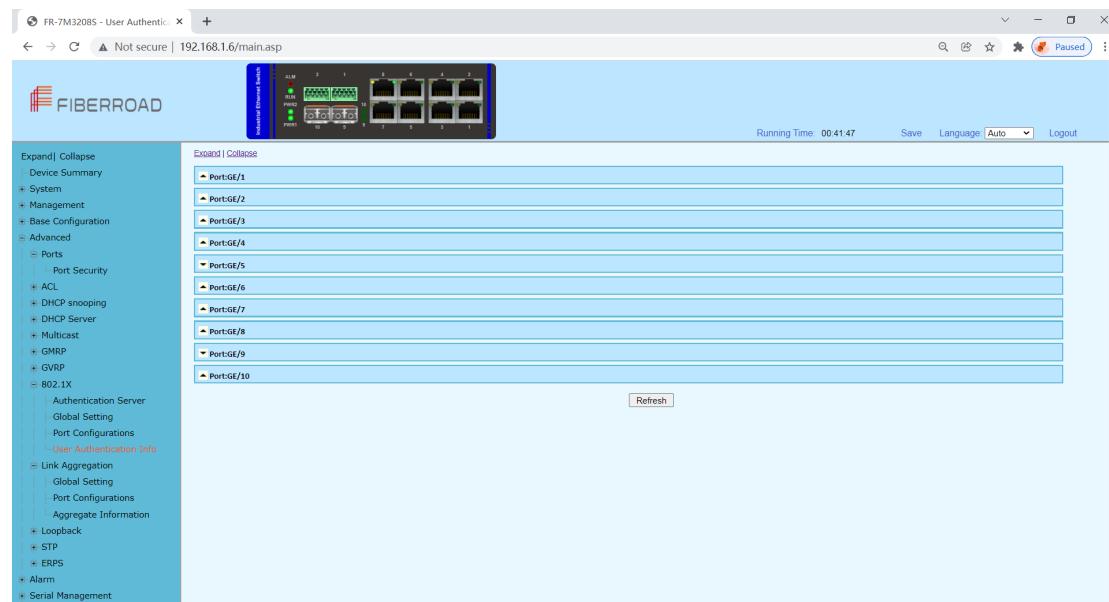

802.1X Port Configurations	
Port	GE/5
Admin Status	Disabled
Authentication Control	Auto
Authentication Mode	PortBased
Max Host Number	8 <1-8> Default:8
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

Remarks: When the 802.1X port is configured to authentication mode, all authenticated users will go offline and re-authentication is required to access the network.

Item	Description	Notes
<b>Port</b>	Selected port configurations	
<b>Admin Status</b>	Enabled: Enabled port 802.1X Disabled: Disabled port 802.1X	Default: Disabled
<b>Authentication Control</b>	Auto: You cannot access the network before authentication. You can access the network after passing the authentication. Forced-Authentication: Always have access to the network Forced-Unauthentication: Always cannot access the network	

<b>Authentication Mode</b>	PortBased: After a user is authenticated, all users can access the network. MacBased: All users need to be authenticated individually to access the network.
<b>Max Host Number</b>	There is maximum number of authenticated hosts supported by the port. Authentication will fail if this number is exceeded. Default: 8

#### 4.8.4 Advanced Configuration – 802.1X – User Authentication Info

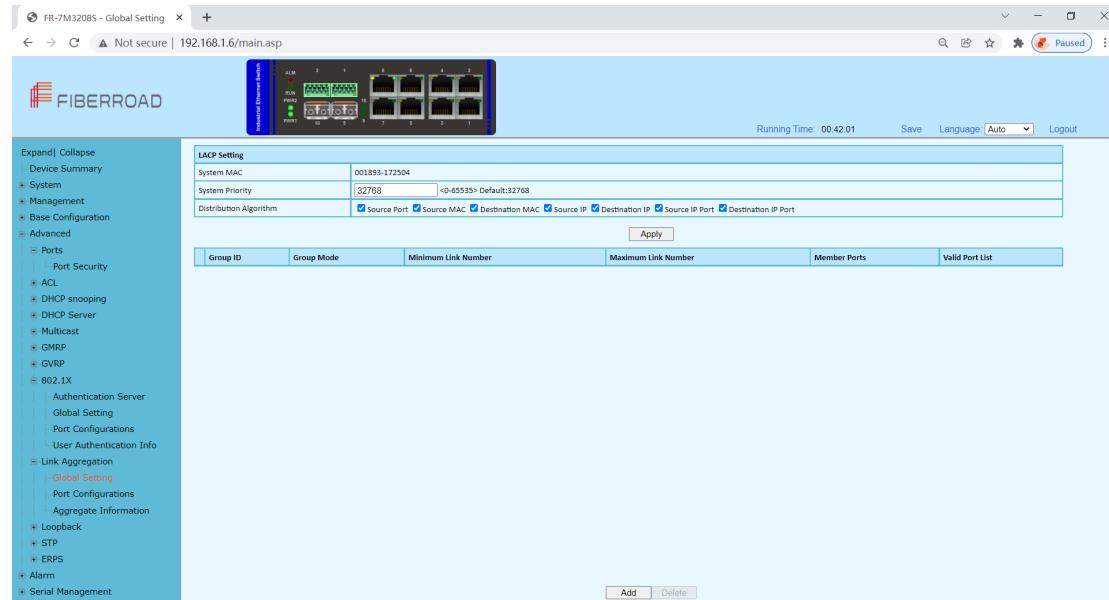

#### Configuration Steps

1. Select [Advanced / 802.1X / User Authentication Information] in the navigation bar to enter the [User Authentication Information] interface.
2. Click [Expand] in the upper left corner to expand the user authentication information for all ports, and click [Close] to close the user authentication information for all ports. Click the icon to expand the user authentication information for the corresponding port, and click the icon to close the user authentication information for the corresponding port.
3. The authentication information of the user can be viewed on this interface: user name, client MAC address, and the time the authentication passed.
4. Click [Refresh] to refresh the current user authentication information.

## 4.9 Advanced Configuration - Link Aggregation

### 4.9.1 Advanced Configuration - Link Aggregation - Global Setting

Link aggregation is a way of bundling a bunch of individual (Ethernet) links together so they act like a single logical link.

### Configuration Steps

1. Select [Advanced / Link Aggregation / Global Setting] in the navigation bar to enter the [Link Aggregation / Global Setting] interface.
2. The link aggregation global configuration can be viewed in the link aggregation global setting interface.
3. To modify the global configuration of link aggregation, modify the corresponding configuration in the LACP (Link Aggregation Control Protocol) configuration box, and then click [Apply].
4. If you want to add an aggregation group, click [set], as shown in figure 14.2. click [Apply].

Item	Description	Notes
<b>System MAC</b>		
<b>System Priority</b>	Set the link aggregation system priority, range 0-65535, the smaller the better.	Default: 32768
<b>Distribution Algorithm</b>	The system supports one or more to compute the load ports according to the source port, source MAC, destination MAC, source IP, destination IP, source IP port and destination IP	
<b>Group ID</b>	Aggregation Group ID information Set Aggregation Group Mode	
<b>Group Mode</b>	Manual: Manual mode, the port of the aggregation group member is manually configured and the port LACP protocol is closed. Static: Static mode, the port of the	

**Minimum Port**

aggregation group member is manually configured and the port LACP protocol is on.  
The active ports minimum number of aggregation group configuration, ranging <0-8>, and the value cannot exceed the maximum number of links.

**Maximum Port**

The active ports maximum number of aggregation group configuration, ranging <0-8>, and the value cannot be less than the minimum number of links.

**Member Port List**

Member port of aggregation group configuration

#### 4.9.2 Advanced Configuration – Link Aggregation – Port Configurations

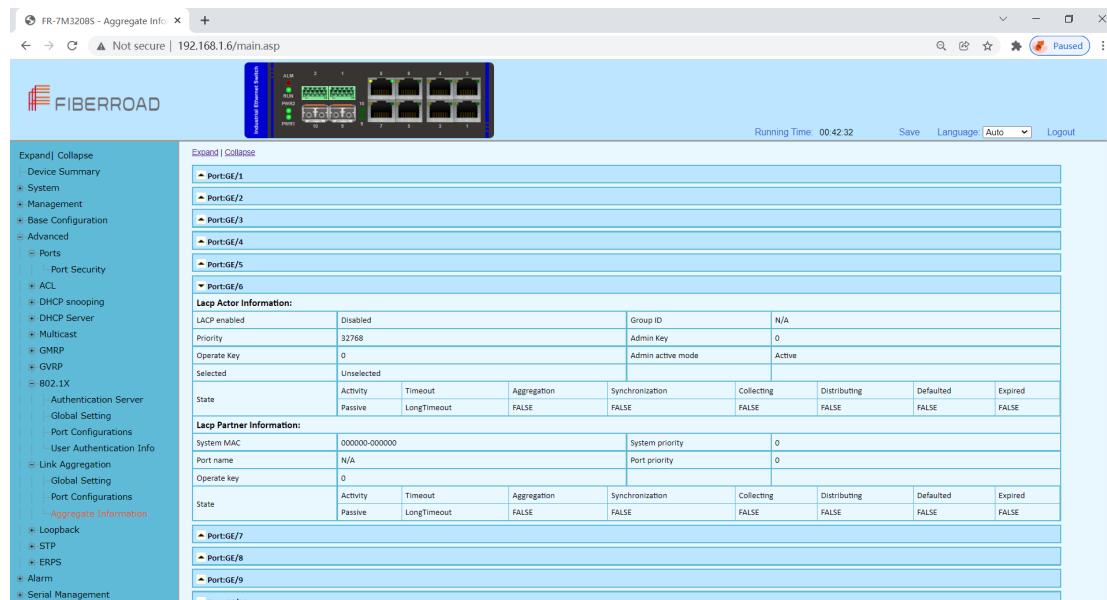

Port	Group ID	Priority	Admin Key	LACP Mode	LACP Admin Status	Setting
GE/1	0	32768	0	Active	Disabled	<a href="#">Modify</a>
GE/2	0	32768	0	Active	Disabled	<a href="#">Modify</a>
GE/3	0	32768	0	Active	Disabled	<a href="#">Modify</a>
GE/4	0	32768	0	Active	Disabled	<a href="#">Modify</a>
GE/5	0	32768	0	Active	Disabled	<a href="#">Modify</a>
GE/6	0	32768	0	Active	Disabled	<a href="#">Modify</a>
GE/7	0	32768	0	Active	Disabled	<a href="#">Modify</a>
GE/8	0	32768	0	Active	Disabled	<a href="#">Modify</a>
GE/9	0	32768	0	Active	Disabled	<a href="#">Modify</a>
GE/10	0	32768	0	Active	Disabled	<a href="#">Modify</a>

#### Configuration Steps

1. Select [Advanced / Link Aggregation / Port Configurations] in the navigation bar to enter the link aggregation [Port Configurations] interface.
2. In the link aggregation [Port Configurations] interface, you can view the link aggregation related configuration of the port.
3. If the link aggregation configuration of the port needs to be modified, click the [Modify] to enter the port configuration interface.
4. Select or fill in the configuration items that need to be modified, and click [Apply] to make effective. If the configuration items are incorrectly filled, there will be corresponding prompts.

Item	Description	Notes
<b>Port Group ID</b>	Name of port The Port ID of aggregation group	
<b>Priority</b>	Port link aggregation priority, range <0-65535>	Default:32768
<b>Admin Key</b>	Enter a value to configure the LACP actor admin key that is used while port participates in dynamic aggregation selection. Range:<0-65535>	Default: 0
<b>LACP Mode</b>	Port master-slave mode in LACP protocol <b>Active:</b> Active mode, the port send protocol messages automatically when LACP protocol enabled. <b>Passive:</b> Passive mode, the port will not send protocol messages automatically, but only send when received protocol messages.	Default: Active
<b>LACP Admin Status</b>	Enabled: Enabled LACP on port Disabled: Disabled LACP on port	Default: Disabled

#### 4.9.3 Advanced Configuration - Link Aggregation - Aggregation Information

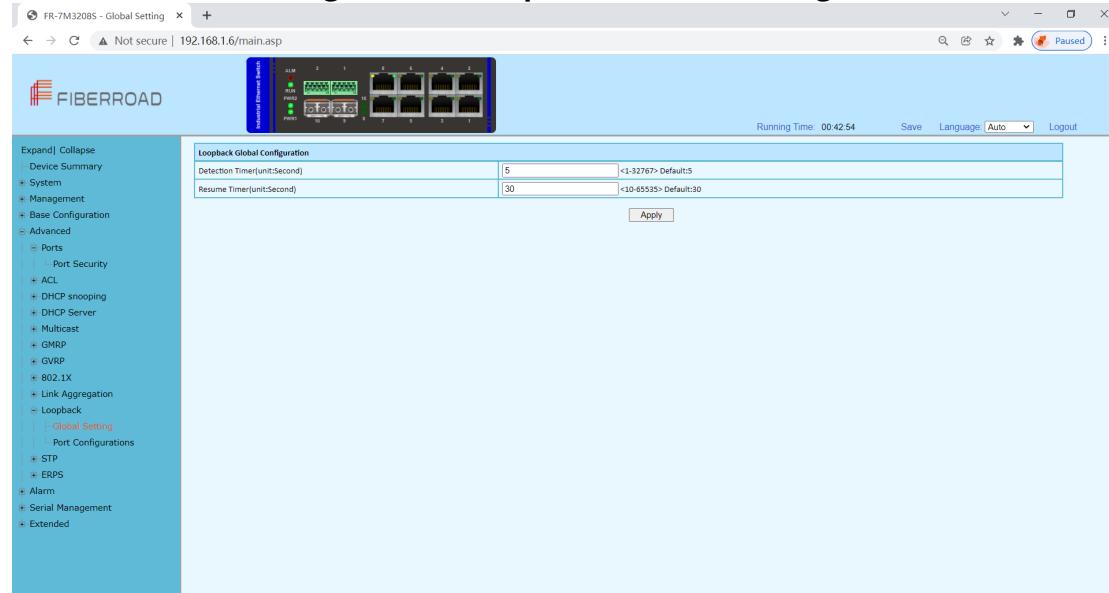

#### Configuration Steps

1. Select [Advanced / Link Aggregation / Aggregate Information] in the navigation bar to enter the [Link Aggregation / Aggregation Information] interface.
2. In the link aggregation [Aggregate Information] interface, all port link aggregation related information can be viewed.
3. Click [Refresh] to see the latest aggregation information for each port.

## 4.10 Advanced Configuration – Loopback

### 4.10.1 Advanced Configuration – Loopback – Global Setting

### Configuration Steps

1. Select [Advanced / Loopback / Global Setting] in the navigation bar to enter [Global Setting] interface.
2. In the global configuration interface, you can view the global configuration information.
3. To modify the global configuration, modify the corresponding configuration in the Global Configuration box and click [Apply], as shown in Figure 11.1

Item	Description	Notes
<b>Detection Timer</b>	Loop detection packet sending interval, range<1-32767>	Default: 5sec
<b>Resume Timer</b>	Port auto resume period, range<10-65535>, must be less than 2x detection timer	

#### 4.10.2 Advanced Configuration - Loopback - Port Configuration

The screenshot shows the 'FR-7M3208S - Port Configuration' page. On the left is a navigation tree with options like Device Summary, System, Management, Base Configuration, Advanced (Ports, ACL, DHCP snooping, DHCP Server, Multicast, GMRP, GVRP, 802.1X, Link Aggregation, Loopback), and Extended. The main area displays a network diagram with ten ports labeled GE/1 to GE/10. Below the diagram is a table with columns: Port, Admin Status, Resume Mode, Execute Operate, Port Status, and Setting. Each row corresponds to a port, showing its current state and configuration options.

Port	Admin Status	Resume Mode	Execute Operate	Port Status	Setting
GE/1	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/2	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/3	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/4	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/5	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/6	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/7	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/8	Disabled	Automation	Shutdown	Linkup	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/9	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/10	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>

#### Configuration Steps

1. Select [Advanced / Loop Detection / Port Configuration] in the navigation bar to enter the Port Configuration interface.
2. On the Port Configuration page, you can see the loop detection configuration information and running status of all the ports.
3. To modify the configuration of a port, simply click the [Edit] on the right side of the corresponding entry to enter the modification interface. Modify the corresponding configuration item, click the [Apply] to complete the modification, and click the [Cancel] to cancel the modification.

Port	Admin Status	Resume Mode	Execute Operate	Port Status	Setting
GE/1	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/2	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/3	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/4	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/5	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/6	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/7	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/8	Disabled	Automation	Shutdown	Linkup	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/9	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>
GE/10	Disabled	Automation	Shutdown	Linkdown	<a href="#">Modify</a>   <a href="#">Resume Now</a>

4. After a loop occurs on a port and the port is shut down or blocked by a specified action, if you want to restore it immediately, you can click the [Restore Now] on the right side of the corresponding entry.

The dialog box is titled 'LoopBack Port Configurations'. It contains four input fields: Port (set to GE/7), Admin Status (set to Disabled), Resume Mode (set to Automation), and Execute Operate (set to Shutdown). At the bottom are 'Apply' and 'Cancel' buttons.

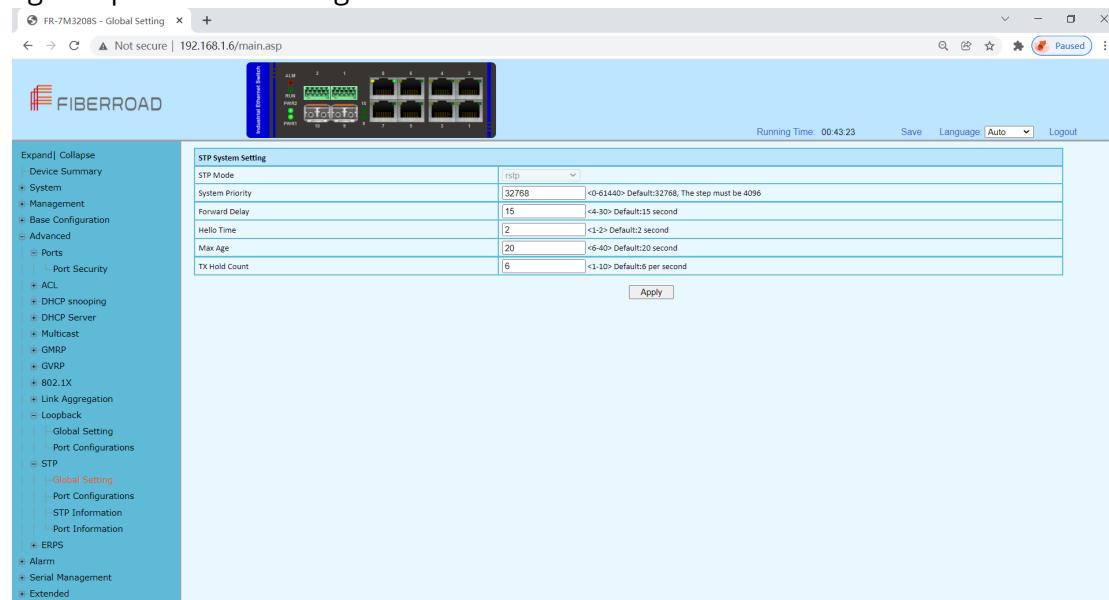

LoopBack Port Configurations	
Port	GE/7
Admin Status	Disabled
Resume Mode	Automation
Execute Operate	Shutdown
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

Item	Description	Notes
<b>Port</b>	Selected Port	
<b>Admin Status</b>	Disabled: Disabled loop detection Enabled: Enabled loop detection	Default: Disabled
<b>Resume Mode</b>	Automatic: After the loop occurs, the port is closed or blocked, and the port automatically recovers. Manual: After a loop occurs, the port is closed or blocked, need to manually restore the port. Shutdown: After the loop occurs, the port is shutdown	
<b>Execute</b> <b>Operate</b>	Blocked: After a loop occurs, the port is blocked	

## 4.11 Advanced Configuration – STP

### 4.11.1 Advanced Configuration – Global Setting

The Spanning Tree Protocol (STP) is responsible for identifying links in the network and shutting down the redundant ones, preventing possible network loops. In order to do so, all switches in the network exchange BPDU messages between them to agree upon the root bridge.

### Configuration Steps

1. Select [Advanced / STP / Global Setting] in the navigation bar to enter the STP[Global Setting] interface.
- 2.The STP global setting information can be viewed in the [Global Setting] interface.
3. To modify the configuration, you can enter the values that need to be configured directly in corresponding configuration item.

Item	Description	Notes
<b>STP Mode</b>	Support RSTP, Compatible with STP	
<b>System Priority</b>	STP System priority, Range<0-61440>, the step must be 4096	Default: 32768
<b>Forward Delay</b>	Delay when port switch between disabled / listening / learning / forwarding, Range<4-30>	Default:15sec
<b>Hello Time</b>	The time interval sent by STP protocol message in stable state, Range<1-2>	Default: 2sec
<b>Max Age</b>	The maximum survival time of the STP protocol packet received by the bridge. If no new protocol packets received at this time, the packet will be discarded. Range<6-40>	Default: 20second
<b>TX Hold Count</b>	The maximum number of STP protocol packets sent by Port per second. Range<1-10>	Default: 6 per sec

#### 4.11.2 Advanced Configuration – Port Configuration

The screenshot shows the 'FR-7M3208S - Port Configuration' interface. On the left is a navigation bar with various settings like Device Summary, System, Management, Base Configuration, Advanced, Ports, and more. The main area displays a network diagram with ports GE/1 through GE/10. Below the diagram is a table titled 'STP Port Configuration'. The table has columns for Port, STP Admin Status, Priority, Path Cost Mode, and Path Cost. All ports are currently set to 'Disabled' for STP Admin Status and have a priority of 128. The path cost mode is set to 'Auto' for all ports, and the path cost is 0 for all ports.

Port	STP Admin Status	Priority	Path Cost Mode	Path Cost
GE/1	Disabled	128	Auto	0
GE/2	Disabled	128	Auto	0
GE/3	Disabled	128	Auto	0
GE/4	Disabled	128	Auto	0
GE/5	Disabled	128	Auto	0
GE/6	Disabled	128	Auto	0
GE/7	Disabled	128	Auto	0
GE/8	Disabled	128	Auto	0
GE/9	Disabled	128	Auto	0
GE/10	Disabled	128	Auto	0

#### Configuration Steps

1. Select [Advanced / STP / Port Configurations] in the navigation bar to enter the STP [Port Configurations] interface.
2. The STP port configuration information can be viewed in the [Port Configurations] interface.
3. To modify the port configuration, you can click [Modify] on the right side of the corresponding port to enter the port configuration interface of the STP.

<b>Item</b>	<b>Description</b>	<b>Notes</b>
<b>Port</b>	Port Name	
<b>STP Admin Status</b>	Enabled / Disabled	Default: Disabled
<b>Priority</b>	Every switch taking part in spanning tree has a bridge priority. The switch with the lowest priority becomes the root bridge. If there's a tie, then the switch with the lowest bridge ID number wins. The ID number is typically derived from a MAC address on the switch.	
<b>Path Cost Mode</b>	The calculation of STP port path overhead, [Auto] or [Managed]	Default: Auto
<b>Path Cost</b>	Path cost - The path cost is the metric STP uses to calculate the shortest path to elect root port to reach the root-bridge .	

Remarks: The STP BPDU message requires a certain Path overhead for each Root port. The Path overhead of each bridge is cumulative, and this value is called Root Path Cost. The path overhead is different corresponding to the root ports of different rates, as shown in the following table:

<b>Port Rate</b>	<b>Path Cost</b>
<b>10Mbps</b>	2,000,000
<b>100Mbps</b>	200,000
<b>1000Mbps</b>	20,000

#### 4.11.3 Advanced Configuration – STP Information

The screenshot shows the 'STP Information' configuration page of the Fiberroad Serial over Ethernet Switch. The page includes a summary table with the following data:

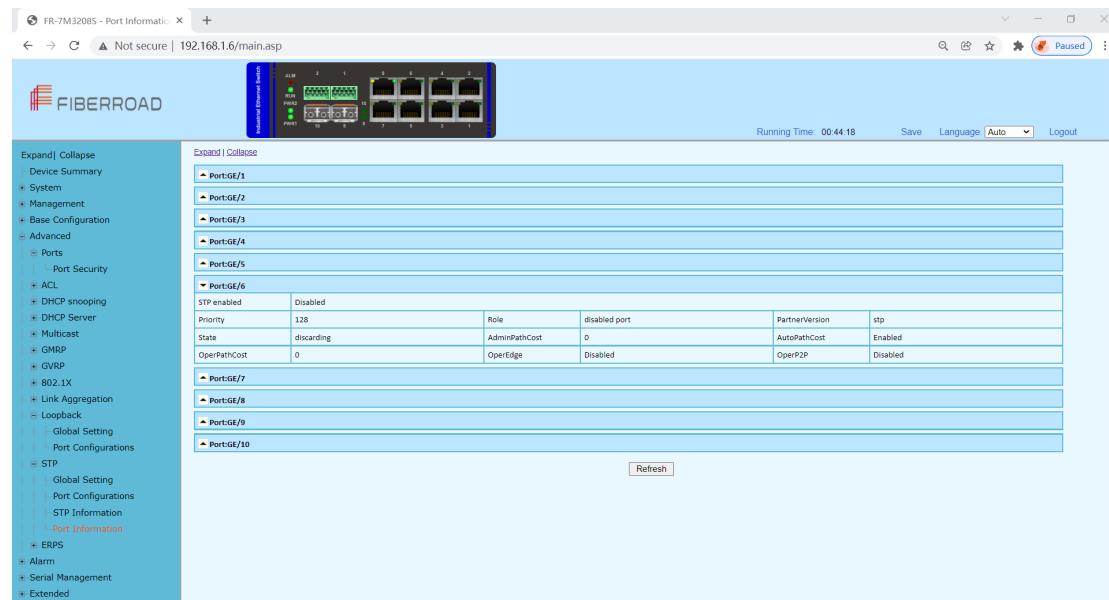

STP Information				
STP Mode	rstp			
Bridge ID	001893-172504 / 32768			
Root ID	001893-172504 / 32768			
Root Path Cost	0			
Admin Timers Value	Forward Delay 15 (second)	Hello Time 2 (second)	Max Age 20 (second)	Transit Limit 6 (per second)
Operative Timers Value	Forward Delay 15 (second)	Hello Time 2 (second)	Max Age 20 (second)	Message Age 0 (second)

Below the table is a 'Refresh' button. The left sidebar contains a navigation menu with the 'STP Information' option highlighted.

## Configuration Step

1. Select [Advanced / STP / STP Informations] in the navigation bar and enter the STP [STP informations] interface.
2. The STP current running information can be viewed in the [STP informations] interface, as shown in figure 7.3
3. Click [Refresh] to show the latest running information.

### 4.11.3 Advanced Configuration – STP Information

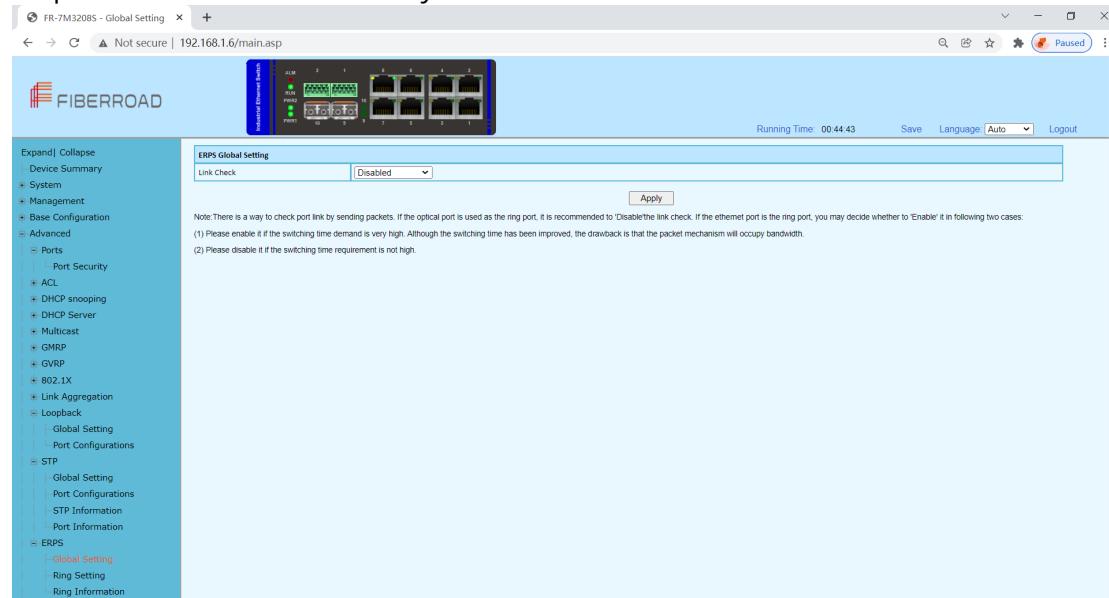

## Configuration Step

1. Select [Advanced / STP / Port Information] in the navigation bar and enter the STP [Port information] interface.
2. The STP current running information can be viewed in the [Port Information] interface, as shown in figure 7.4
3. Click [Refresh] to show the latest running information.

## 4.12 Advanced Configuration – ERPS

### 4.12.1 Advanced Configuration – Global Setting

Ethernet Ring Protection Switching, or ERPS, is an effort at ITU-T under G. 8032 Recommendation to provide sub-50ms protection and recovery switching for Ethernet traffic in a ring topology and at the same time ensuring that there are no loops formed at the Ethernet layer.

### Configuration Step

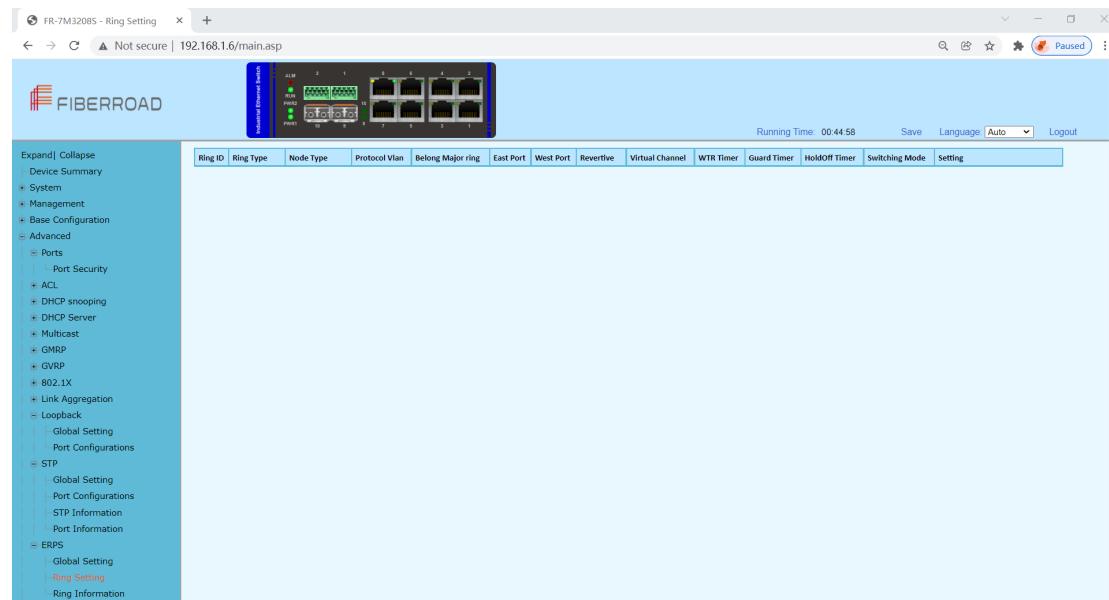

1. Select [Advanced / ERPS / Global Setting] in the navigation bar and enter the ERPS [Global Setting] interface

Remarks: 1, There is a way to check port link by sending packets. If the optical port is used as the ring port, it is recommended to 'Disable' the link check. If the ethernet port is the ring port, you may decide whether to 'enable' it in the following two cases:

(1) Please enable it if the switch time demand is very high. Although the switching time has been improved, the drawback is that the packet mechanism will occupy bandwidth.

(2) Please disable it if the switching time requirement is not high.

## 4.12.2 Advanced Configuration – ERPS - Ring Setting

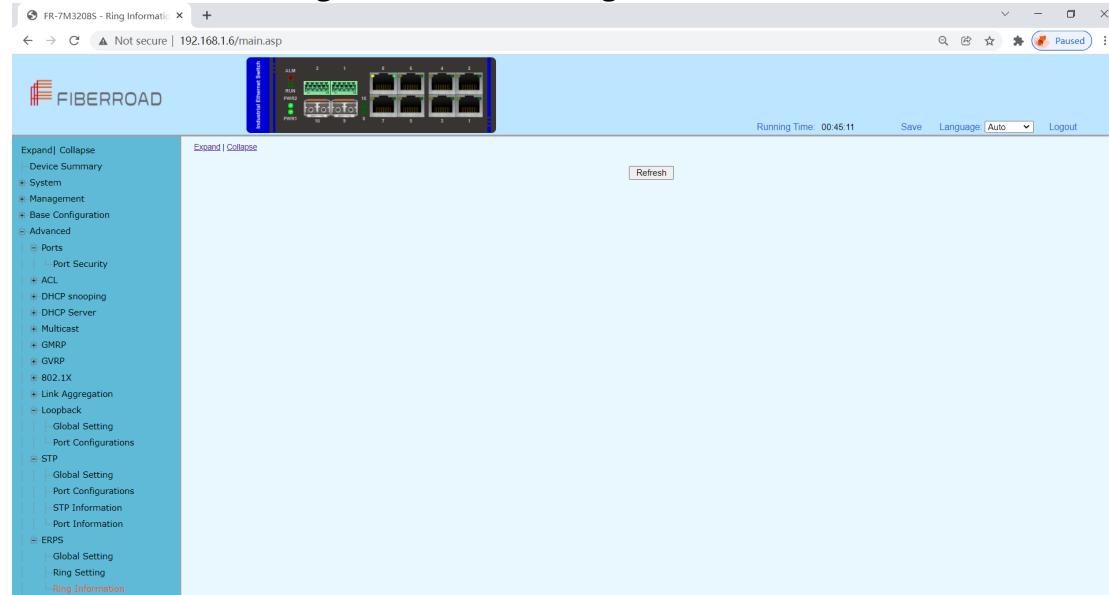

### Configuration Step

1. Select [Advanced / ERPS / Ring Setting] in the navigation bar and enter the ERPS [Ring Setting] interface

Item	Description	Notes
<b>Ring ID</b>	Ring Adding ID <1-255>	
<b>Ring Type</b>	Major-ring / Sub-ring  <b>Transfer:</b> Forward both service packets and protocol packets  <b>rpl-owner:</b> Responsible for blocking traffic over the RPL so that no loops are formed in the Ethernet traffic. There can be only one RPL owner in a ring.	
<b>Node Type</b>	  <b>rpl-neighbour:</b> An Ethernet ring node adjacent to the RPL. It is responsible for blocking its end of the RPL under normal conditions. This node type is optional and prevents RPL usage when protected.	
<b>Protocol VLAN</b>	Adding ring ERPS protocol VLAN	
<b>East Port</b>	A Ring port created on this node	
<b>West Port</b>	Another ring port created on the node	
<b>RPL Port</b>	*Port on an RPL Link  <b>East Port</b> <b>West Port</b>	
<b>Belong Major Ring</b>		
<b>Virtual Channel</b>		
<b>WTR Timer</b>	<1-12> minutes, Default: 1 minutes, Step 1 minutes	

<b>Guard Timer</b>	<10-2000>milliseconds Default:500 milliseconds, Step is 10 milliseconds
<b>HoldOff Timer</b>	<0-10000>milliseconds Default:0 milliseconds, Step is 100 milliseconds

#### 4.12.3 Advanced Configuration – ERPS - Ring Information

#### Configuration Step

1. Select [Advanced / ERPS / Ring Informations] in the navigation bar to enter the interface of ERPS [Ring Network Information].
2. The ERPS current running information can be viewed in the [Ring Informations] interface, as shown in figure 8.5.
3. Click [Refresh] to show the latest running information.

▼ Ring ID:1					
Ring Type	major-ring	Node Type	transfer	Protocol Vlan	1
Revertive	revertive	FSM State	protection	Virtual Channel	with
East Port	GE/1/blocking	West Port	GE/2/blocking	Belong Major ring	N/A
Guard Timer	500milliseconds	HoldOff Timer	0milliseconds	WTB Timer	5000milliseconds
WTR Timer	1minutes	Force Switch	Disabled	Manual Switch	Disabled

## 4.13 Advanced Configuration – Alarm

### 4.13.1 Advanced Configuration – Alarm – Relay Setting

Alarm Event	Port	Admin Status	Link Status	Alarm Status
*	GE/1	Disabled	✗	No
LinkDown	GE/2	Disabled	✗	No
LinkDown	GE/3	Disabled	✗	No
LinkDown	GE/4	Disabled	✗	No
LinkDown	GE/5	Disabled	✗	No
LinkDown	GE/6	Disabled	✗	No
LinkDown	GE/7	Disabled	✗	No
LinkDown	GE/8	Disabled	✓	No
LinkDown	GE/9	Disabled	✗	No
LinkDown	GE/10	Disabled	✗	No
Power Supply	N/A	Enabled	N/A	No
Low Temperature	N/A	Enabled	N/A	No
High Temperature	N/A	Enabled	N/A	No

#### Configuration Step

1. Select [Advanced / Alarm / Relay Setting] in the navigation bar to enter the interface of Alarm [Relay Setting].
2. The Alarm Event, Admin Status, Link Status and Alarm Status can be viewed in the [Relay Setting] interface
3. Select [Disabled/Enabled] of admin Status, Click[Apply] to submit the admin status.
4. Click [Refresh] to show the latest running information.

### 4.13.2 Advanced Configuration – Alarm – Led Setting

Alarm Event	Port	Admin Status	Link Status	Alarm Status
*	GE/1	Disabled	✗	No
LinkDown	GE/2	Disabled	✗	No
LinkDown	GE/3	Disabled	✗	No
LinkDown	GE/4	Disabled	✗	No

Low Temperature	N/A	Enabled	N/A	No
High Temperature	N/A	Enabled	N/A	No

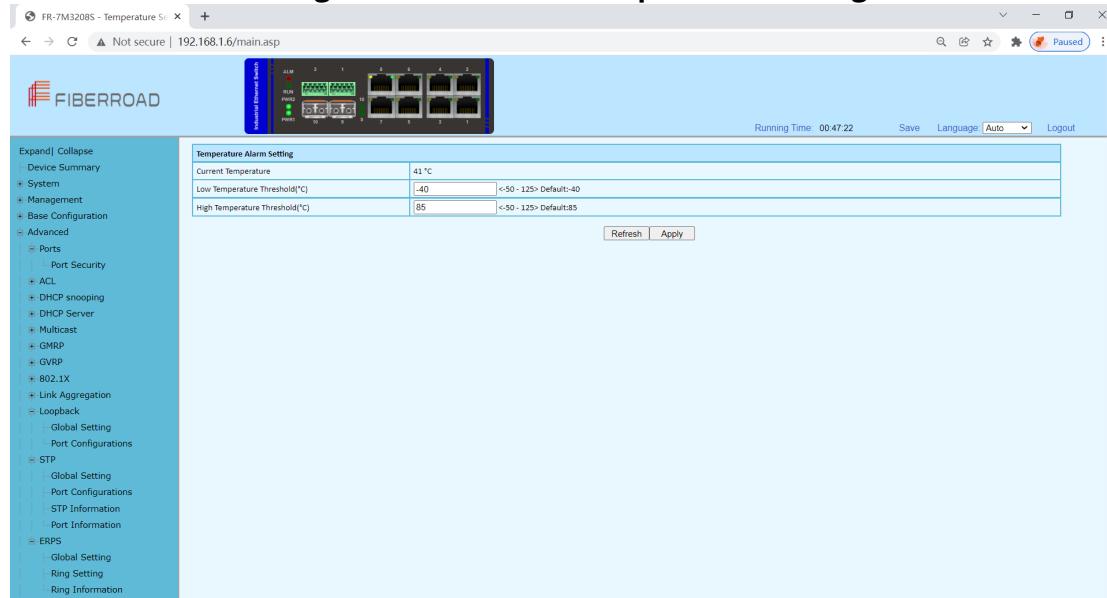

#### Configuration Step

1. Select [Advanced / Alarm / Led Setting] in the navigation bar to enter the interface of Alarm [Led Setting].
2. The Alarm Event, Admin Status, Link Status and Alarm Status can be viewed in the

### [Led Setting] interface

- 3 Select [Disabled/Enabled] of admin Status, Click[Apply] to submit the admin status.
4. Click [Refresh] to show the latest running information.

### 4.13.3 Advanced Configuration - Alarm - Temperature Setting

### Configuration Step

1. Select [Advanced / Alarm /Temperature Setting] in the navigation bar to enter the interface of Alarm [Temperature].
2. The current temperature and temperature setting can be viewed in the [Temperature Setting] interface
- 3 Enter required temperature value at the Low / High Temperature Threshold(°C), Click[Apply] to submit the modification.
4. Click [Refresh] to show the latest information.

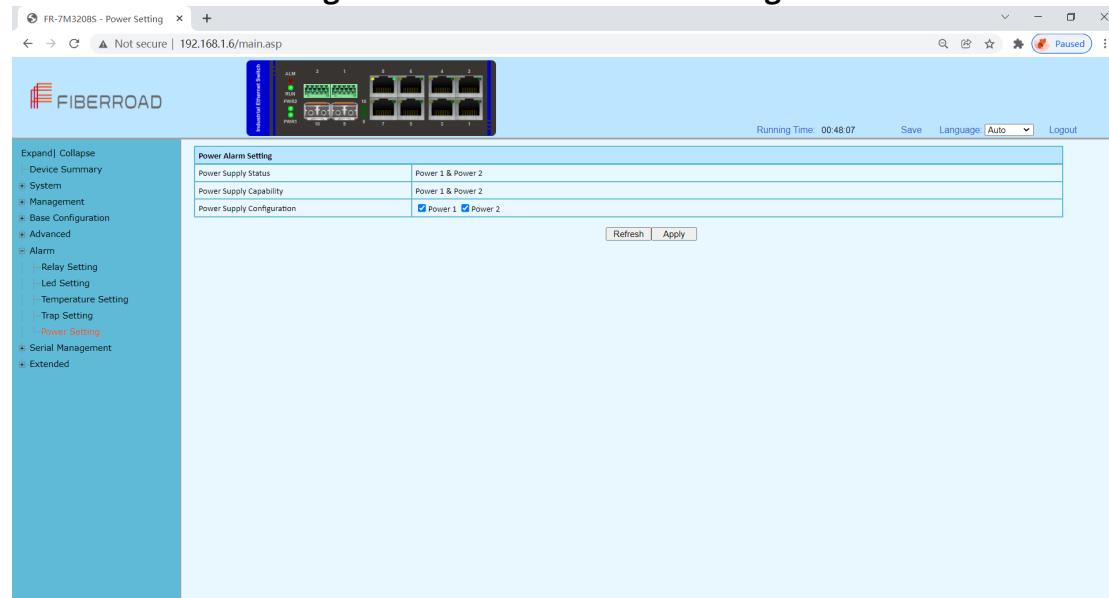

#### 4.13.4 Advanced Configuration – Alarm – Trap Setting

Alarm Event	Port	Admin Status	Link Status	Alarm Status
*		<>		
LinkUp	GE/1	Disabled	✗	No
LinkUp	GE/2	Disabled	✗	No
LinkUp	GE/3	Disabled	✗	No
LinkUp	GE/4	Disabled	✗	No
LinkUp	GE/5	Disabled	✗	No
LinkUp	GE/6	Disabled	✗	No
LinkUp	GE/7	Disabled	✗	No
LinkUp	GE/8	Disabled	✓	No
LinkUp	GE/9	Disabled	✗	No
LinkUp	GE/10	Disabled	✗	No
LinkDown	GE/1	Disabled	✗	No
LinkDown	GE/2	Disabled	✗	No
LinkDown	GE/3	Disabled	✗	No
LinkDown	GE/4	Disabled	✗	No
LinkDown	GE/5	Disabled	✗	No
LinkDown	GE/6	Disabled	✗	No
LinkDown	GE/7	Disabled	✗	No
LinkDown	GE/8	Disabled	✓	No
LinkDown	GE/9	Disabled	✗	No
LinkDown	GE/10	Disabled	✗	No
Power Supply	N/A	Enabled	N/A	No
Low Temperature	N/A	Enabled	N/A	No
High Temperature	N/A	Enabled	N/A	No

#### Configuration Step

1. Select [Advanced / Alarm / Trap Setting] in the navigation bar to enter the interface of Alarm [Trap Setting].
2. The Alarm Event, Admin Status, Link Status and Alarm Status can be viewed in the [Trap Setting] interface
3. Select [Disabled/Enabled] of admin Status, Click[Apply] to submit the admin status.
4. Click [Refresh] to show the latest running information.

#### 4.13.5 Advanced Configuration - Alarm - Power Setting

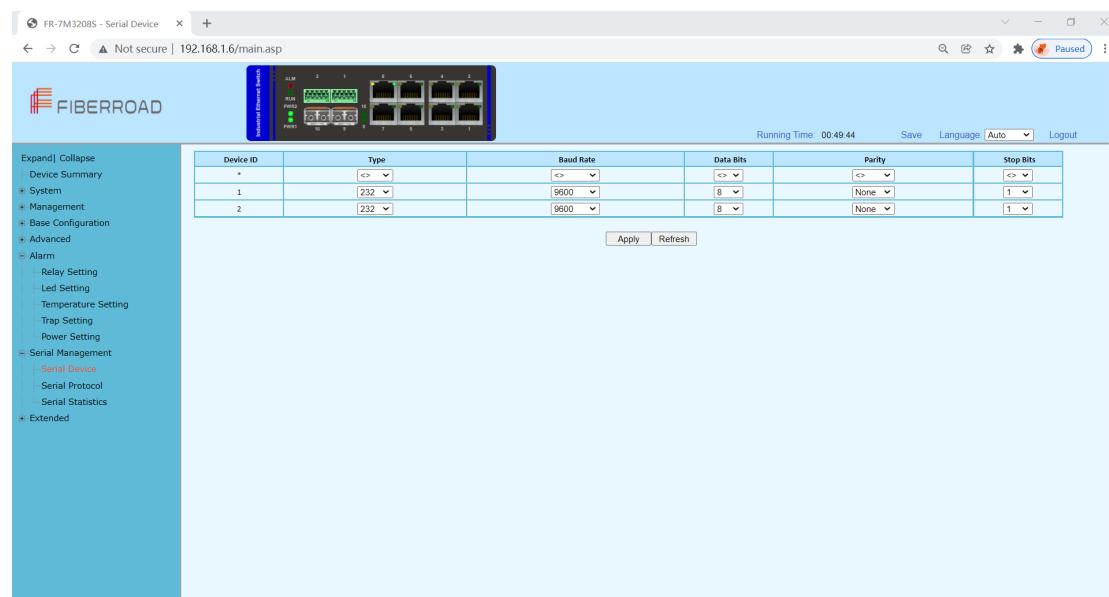

#### Configuration Steps

1. Select [Advanced / Alarm /Power Setting] in the navigation bar to enter the interface of Alarm [Power Supply].
2. The power Alarm Setting can be viewed in the [Power Setting] interface
3. Select required power supply configuration ,Click[Apply] to submit the modification.
4. Click [Refresh] to show the latest information.

#### 4.14 Serial Management

##### 4.14.1 Serial Management - Serial Device

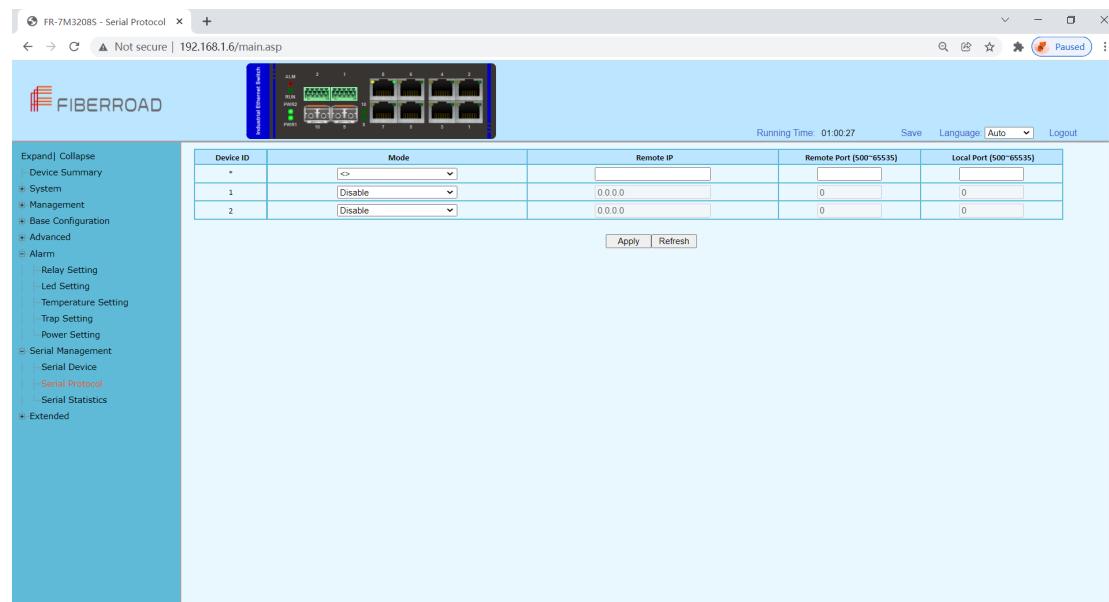

### Configuration Steps

1. Select [Serial Management /Serial Device] in the navigation bar to enter the interface of Serial Management [Serial Device].
2. The serial ports configuration can be viewed in the [Serial Device] interface
3. Select required Type, Baud Rate, Data Bits, Parity, Stop Bits , Click[Apply] to submit the modification.
4. Click [Refresh] to show the latest information.

Item	Description	Notes
Type	Type of serial ports <b>&lt;232/422/485&gt;</b>	
Baud Rate	To make two devices compatible with each other baud rate is mentioned in the serial communication so that the transmission becomes easy and error free. <b>&lt;2400-115200&gt;</b>	
Data Bits	The data bits transferred through a serial port might represent device commands, sensor readings, error messages, and so on. <b>&lt;5-8&gt;</b>	
Parity	Parity is a method of detecting errors in transmission. When parity is used with a serial port, an extra data bit is sent with each data character, arranged so that the number of 1 bits in each character, including the parity bit, is always odd or always even. <b>&lt;None/Odd/Even&gt;</b>	
Stop Bits	The stop bit is used to signal the end of a frame. The data is contained in the data bits and the parity bit is an extra bit that is often used to detect transmission errors. <b>&lt;1/2&gt;</b>	

#### 4.14.2 Serial Management – Serial Protocol

#### Configuration Steps

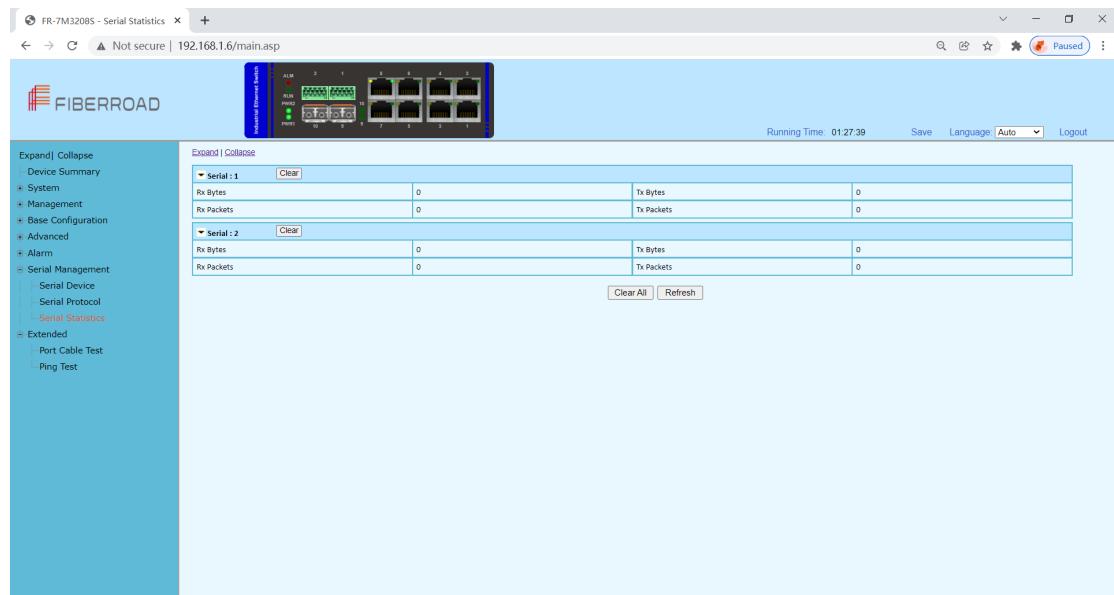

1. Select [Serial Management /Serial Protocol] in the navigation bar to enter the interface of Serial Management [Serial Protocol].
2. The serial ports protocol can be viewed in the [Serial Protocol] interface
3. Select required Mode, Remote IP, Remote Port, Local Port Click[Apply] to submit the modification.
4. Click [Refresh] to show the latest information.

Item	Description	Notes
<b>Mode</b>	<b>Disable</b> <b>TCP Server:</b> Stream the serial communication through TCP/IP protocol <b>TCP Client:</b> TCP Client will connect to server to realize data transmission between the serial port device and server. <b>UDP:</b> In UDP Mode, you can unicast or multi-unicast data from a serial device to one or multiple host computers. <b>Modbus ASCII TCP Server</b> <b>Modbus RTU TCP Server</b> <b>Modbus ASCII TCP Client</b> <b>Modbus RTU TCP Client</b>	
<b>Remote IP</b>	<b>As needed</b>	
<b>Remote Port</b>	<b>&lt;500-65535&gt;</b>	
<b>Local Port</b>	<b>&lt;500-65535&gt;</b>	

Notes: The original Modbus specification included two possible transmission modes: ASCII and RTU. Modbus RTU mode is the most common implementation, using binary coding and CRC error-checking. Modbus ASCII messages (though somewhat more readable because they use ASCII characters) is less efficient and uses less

effective LRC error checking. ASCII mode uses ASCII characters to begin and end messages whereas RTU uses time gaps (3.5 character times) of silence for framing. The two modes are incompatible so a device configured for ASCII mode cannot communicate with one using RTU. Modbus ASCII messages require twice as many bytes to transmit the same content as a Modbus RTU message.

#### 4.14.3 Serial Management – Serial Statistics

#### Configuration Steps

1. Select [Serial Management /Serial Statistic] in the navigation bar to enter the interface of Serial Management [Serial Statistics].
2. The serial ports setstatistics can be viewed in the [Serial Protocol] interface.
3. Click [Clear All] to restart the staticstics .
4. Click [Refresh] to show the update statistics information.

## 4.15 Advanced Configuration – Extended

### 4.15.1 Advanced Configuration – Extended – Port Cable Setting

You can check the status of copper cables using the time domain reflectometer (TDR). The TDR detects a cable fault by sending a signal through the cable and reading the signal that is reflected back to it. All or part of the signal can be reflected back by any number of cable defects or by the end of the cable itself.

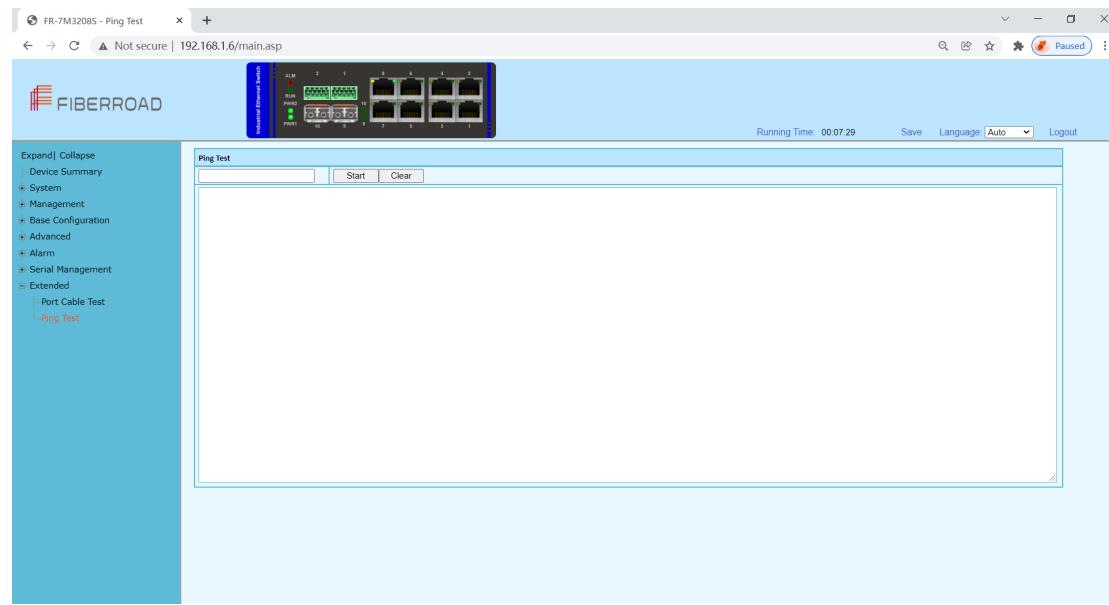

#### Configuration Step

1. Select [Advanced / Extended /Port Cable Test] in the navigation bar to enter the interface of [Port Cable Test]
2. The Port Cable Setting and Result can be viewed in the [Port Cable Test] interface
3. Select needed test port at the port list ,Click[Start] to submit the testing.

#### 4.15.2 Advanced Configuration – Extended – Ping Test

The easiest way to ping a specific port is to use the telnet command followed by the IP address and the port that you want to ping.

#### Configuration Steps

1. Select [Advanced / Extended /Ping Test] in the navigation bar to enter the interface of [Ping Test].
2. The ping test configuration and process can be viewed in the [Ping Test] interface
3. Enter destination address, Click[Start] to submit the ping test, all the command can be viewed at the below blank.
4. Click [clean] to clean all of the command at the blank..
